4449. FA: REALISTIC PRO 2006 SCANNER

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-24 00:00:00 UTC
From: Daniel Hicks <dahicks@email.com>
Message-ID: <1xxw3.1392$M05.5382@newsfeed.slurp.net>
Source record: 100163

About a day left at Ebay on this Pro-2006 scanner.

The receive mod has been done, and the scanner receives most frequencies from 30 through 1300-MHz, in AM, NFM, and WFM modes. There are 400 memory channels, with a two-speed hyperscan feature. The unit is in overall great condition, both physically and electronically. A power adapter is included. There is no manual.

The current price is about $277.00.

Say what??
Please elaborate how the antenna gets involved in "motor noise".
I run glassmounts on three rigs, with no problems at all.

4454. FS: Kenwood VFO 230

I am currently a General licensee and I didn't get a "doctor's" note like so many seem to be doing. I struggled to learn the code, and became proficient enough to upgrade. I even have QSL cards from CW QSO's. I will admit openly that my speed is down to probably 5wpm. I just don't have a use for CW, but I believe that there is a need to retain at least a 5wpm requirement for testing.

It seems to be an interesting band so I got a repairable 6M rig for
$5. The receiver appears to be working but I have not heard a single
transmission. I am using an indoor 40M dipole but I was expecting
to hear something here in the center of PA.
Does this sound normal or is my $5 rig worth what I paid?
Do many people do CW on 6?

I am able to receive the neighbor's baby monitor on 49 but the baby
doesn't QSL.

Hi Gang,

Mirage B2516G 2 meter amp with a gasfet pre-amp. 25 watts in will get you 160 out. It is in excellent shape including manual and schematic. This is a pre MFJ amp. I'm replacing it with a 10 watt in model. The asking price is $200.

Thanks & 73,
Nick

SPECIFICATIONS

Frequency Range 144 to 148 MHz
R. F. input power (Drive): 1 to 40 Watts

R. F. output power: 160 Watts with 25 Watts drive.

Duty Cycle: Intermittent (ICAS)

Modes: FM, SSB, CW

Receive Pre-amp: GaAsFet, Gain 21/15 dB-Nominal.
Noise
figure less than 0.6 dB. 1 dB
compression
point greater than -13 dBm
input (Nominal)

VSWR Power Shut-down
point: 3:1 Approximately

R.F. input Power
Shut-down point: 40 Watts Nominal

Temperature Power
Shut-down point: 175 Degrees F

Keying: Automatic (R.F. sensing) or remote
(external).

Input/Output Impedance: 50 ohms

R.F. connectors: SO-239 (UHF)

Remote keying connector: RCA phono

Remote control connector: 6 pin Molex

Supply voltage: 13.8 VDC (for full R.F. power output)

Supply current: 25 amps (nominal)

Fuse: Low voltage, fast blow, 35 amps

Physical Dimensions: 12 x 3 x 5 1/2 inches

Weight: 5 pounds

HA HA !
I thought it was funny how Icom USA denied the IC-756 Pro Existence as usual.
It cracks me up. They denied the IC-706 Mk ii and the G model till Japan put it
on the Web page. HAHA
This radio was orignially seen on the
WATERS AND STANTON Webpage till
Icom UK (GREAT BRITAIN) forced them to take it down 6 months ago.
It looks like a great radio. The specks are
really super too.

Anyone own a Kenwood THD7A HT. Its the one with the built-in TNC.

Does the radio receive AX25 packet without a PC connected?

Can you send text messages without a PC connected?

Thanks for any help.

I head the same thing. They will call it the FT-100 MK II. It appears they have to rework the radio completely. It is sort like the Icom 706 MK II. They needed to get the bugs out. You would be better off with the IC -706 MK IIG if you can't wait.

Yes, Sort of, and Sort of.

It will see AX25 but unless you have the PC attached, you won't get anything but their callsign, unless it's APRS traffic.

You can send UI messages, and you can use APRS messaging on the built-in keyboard, but it's useless for packet chit-chat. It's really intended for use with APRS, and it works great there. If you plug in a PC (a serial cable from a dead mouse and a radio-shack 3/32 stereo plug) then you can run AX25, or anything else you'd like.

I've done D7-D7 through MIR direct in APRS, that's fun, and only three days left!

I am currently a General licensee and I didn't get a "doctor's" note like so many seem to be doing. I struggled to learn the code, and became proficient enough to upgrade. I even have QSL cards from CW QSO's. I will admit openly that my speed is down to probably 5wpm. I just don't have a use for CW, but I believe that there is a need to retain at least a 5wpm requirement for testing.

>I am able to receive the neighbor's baby monitor on 49 but the baby
>doesn't QSL.

When the band is closed you'll only be able to hear locals (assuming
you have locals who are on 6). When the band is open you'll be able to
hear stations all over the country running only a few watts. As we
near the peak of the sunspot cycle, there should be more and more
openings.

It's a streaky band, but fun.

Bob
n5ahy

(If you have a local TV station operating on channel 2, there may not
be many locals on 6 meters, as the 6 meter band is right next to
channel 2 and causes interference.)

When its flat, its very flat, but when it opens, its a very nice band.
I have worked a large portion of Europe from the SW UK, using a
homemade beam and 5watts.

I have recently acquired an Auto-Mate K5/50 Electronic Keyer Kit. It was assembled by a perfectionist and seems to work perfectly. I understand that this keyer was designed and sold by Ben Woodruff of Chicago in the1960's and is very similar to a Hallicrafters product.

The sidetone in this keyer is more of a buzz than a tone (at least when put through standard stereo headphones). Is this normal? I would appreciate hearing from someone else who has used this keyer.

Thanks.

I, for one, was offended by the post in question whether the radio was
over-priced or not.

Additionally, I think that any radio is worth 75% of the new price
especially on currently available models. Saving 25% on the new price
in addition to potential savings on sales tax and/or shipping is a
great deal.

I just sold this radio along with the remote speaker for $175. That is
a deal for a great radio. I would have never sold it but I used the
money to buy an FT-8100, a dual-band.

I really like mine, had it for about a month now. Intermod doesn't seem to be an issue with this radio, live in a congested city area - works with no problems. Everything is easy to program, has a high channel scan rate and great audio. Put mine on the bird - 67 watts at 145.000!

One problem though - when you're monitoring a memory channel that has an alphanumeric tag, every once in a while the radio will start putting up seemingly random numbers across the display as a signal is being received. You have to key the radio to return it to normal, then key up again to talk. I emailed Yaesu tech support, said this was a known problem with the earlier radios, but it has since been fixed. If you happen to get one of the older radios, they'll fix it for ya and promised a 10 day turnaround.

Other than that, it has been a great little radio. I wouldn't take this one off the list for that though....and good luck with the search.

arrl.org index of old articles.

Dig enough in these and you'll find mods, I did, but haven't done any.
The one for LF coverage was tempting, but too much noise here.

>
> -troubleshooting or problems you managed to solve on your own.

I blew the ts430s driver transistors, and replaced them.
I'd overdriven them while tuning.

Hello,
I have a Kenwood PS-30 power supply for sale. Cosmetics and Electrical condition are very good to excellent. I have the original manual and the original shipping container for it too. This is the 20 amp power supply that works with all the Kenwood HF rigs including the TS-120/130/140/180/660/670/430/440/450/850/570/50 etc.

This will also work with the Icom 730 and other Icom HF rigs too. Plug and
play (no rewire of the socket required).

Includes front panel on/off switch, and separate terminals for 13.8VDC accessories.

Price is $94 + shipping (it's heavy) from zip 97229

thanks,
Joe K7JOE in Portland Oregon
no lids....no kids....no space kadets
Class A Operators Only.

Hi,
I have for sale a very good condition Yaesu Dual Band Mobile covering
2 meters and 440. This is from 1992, little used. Dual band receive
(two
bands at once). Has both PL encode and decode boards for both bands(2).
50 watts output on 2M, 40W output on 440 band. Wide band receive.
Covers entire 430-450 UHF band too, for use in remote receive/link
conditions. Unmodified, but can be modded for MARS, and modded for
cross band repeater use. Includes
remote mountable faceplate too (mount radio in trunk, under seat, etc)
and
connection cable and harness. Also includes DTMF tone microphone,
original box, mobile bracket, power cord, remote mounting gear, original
owners manual,
original styrofoam packing, and the Yaesu sales "slick" literature on
the rig and a
Yeasu bumper sticker.
Has LCD readout and separate pigtail antenna ports for VHF and UHF
$239 + shipping.

Thanks,
Joe K7JOE
Portland Oregon.

Sorry, The P50 is not a RSS programmable radio. Only the P50+ is.
Then only it PL/DPL code is along with certain signalling parameters.

PL/DPL encode level is done with the small surface mounted pot on the
encode/decode board under the battery.

There isn't a pot for xmit audio deviation. It is fixed. I've never
had a P50 with low deviation. No or little deviation is usually
traced to the mic element itself.

what antenna are you using and how is the coax routed. also it is grounded directly to the battery? There is a problem with on glass antennas and motor noise..

4508. need HR-1680 document

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-24 00:00:00 UTC
From: weathrship@aol.com
Message-ID: <19990823230414.05316.00003444@ng-fe1.aol.com>
Source record: 100255

Howdy you-all,

I am in dire need of an original or copy of the supplemental diagram
which is not included as an integral part of the heath hr-1680 manual.

I ordered a manual from K7FG (or something) manuals and the manual
refers to this supplemental which probably came out and unfolded, showing
some critical parts locations and worst of all the 'CRITICAL' placement of
the wires from preselector air variable. Sheeesh. "place wires exactly as
shown" double sheeesh. I of course, before having the manual had some
oscillation problems and found that I could get rid of them by moving these
wires. It seems the gain is low and hardly any S meter on strong signals
but that might have been evident previously. In any case, I was trying to
align the rig without the extension connectors (not too hard except for
the bandpass trimmer caps) and now I cant continue till I find where these
wires
are laid out. Being a home brew enthusiast, I can see the circuit is for the
most
part, a fine one except for the 'critical placement' of the preselector wires.

Help me please, radiomen?

Your pal,
The Weathership

4512. Air communications frequencies and ham radio rig legality

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-24 00:00:00 UTC

Hi folks,

Is there a web site that lists out all the ATC communication frequencies at the various airports around the world? I am getting into ham radio and have this little rig that I intend to carry on my travels. It would be nice to be able to listen in on the chatters when I am on the ground. Any other interesting frequencies to listen in that's around airports would be helpful too.

Also, does anyone know any restrictions for carrying such a unit internationally? I know it's no problems in N America, Australia etc. But I am not sure of the legality of such a unit in european countries. I am not keen on the idea of it being confiscated. Anyone know the issues here?

Just in case someone raises it. No, I won't turn it on during flights.

Cheers,
--Weiyun

I've had a couple of repair experiences with Peet Bros over the last
couple of years and all have been good. A humidity sensor died and I
got a replacement IC within 2 days free of charge. A nearby lightning
strike fried my Ultimeter 2000 and they repaired it for a nominal
charge (and no it was not properly grounded). They have always been
accommodating.

Bob

P.S. Don't talk to me about the Davis....the thing is turning out to
be a BITCH to program!

I'm sue there are lots of sites that list the frequencies you are looking for, you may want to start someplace like the ARRL or FCC and just get the ranges from the frequency spectrum and scan between those points.

Remember plane to ground is on AM, if you are planning on a 2 meter rig then it may only be FM.

Lots of stuff is going on in the 150 to 160 areas and the same in the business band just above 440 at airports. How much of it you would want to listen to and still stay awake is another matter. As a general rule of thumb, if you see somebody with a radio you can guess about what band they are on by the length of their antenna. Of course there are zillions of cellular calls, but that would be illegal. (which is my way of saying if you are using a cell phone at an airport, there is a very good chance somebody is listening to it)

As to foreign countries - you will need a recripical license to use your radio to transmit in many of them. again, the ARRL has the necessary information on their website (www.arrl.org). As to restrictions on carrying a unit internationally, it depends on the radio and where you are going.

Hi,

I don't know a list of all ATC frequencies, but you may check this site
out, with lots and lots and lots of links from Dutch ATC.
Check http://www.atc-gilde.demon.nl/linksen.htm#8.
There may be some links you're looking for....

You also can check out http://home.multiweb.net/~mdn/atc.html#A so you
can listen LIVE Air Traffic Control using real audio. It's cool.

I posted my experiences doing a very similar repair to my SW8 here about 6 months ago. In fact, I used the same diodes that you used. I found them a Tech America and they got them to me the next day! All went well during "surgery" and the "patient" now exhibits far improved performance on the bands above 8 Mhz. I figure I saved quite a few $$ not having to send the receiver to Drake.

Good luck with your HF-225/E and may it have many more lives.
Brian Denley

Fortunately I have a multiband receive unit (VX5) and can pick up those
AM ATC transmissions. But I would like to collect a list of ATC
frequencies for my regular airports. This way I'll be able to
preprogram my toy and get all the actions after I land.

I have no interests in cellular calls. It's those ATC calls I am
interested in. Yes, they are great for going to sleep on. I always
listen to channel 9 on UA flights. Great background chatters to sleep
on.

4528. Kenwood Nut Tools Almost Gone

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-24 00:00:00 UTC
From: DontDoIt@ImNotHere.com
Message-ID: <37c374e8.524068@news.mv.com>
Source record: 100275
Cross-posted to: rec.radio.swap,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi all;

The next (and last) batch of Kenwood "Nut Tools" has finally arrived. To those who've waited for me to ship yours, they are all going out TODAY, 8/24. Thank you for your patience!

I now have 3 final tools available for sale, and once they're gone, that's it, I'm going to call it quits.

So, for those of you who have a Kenwood or other rig that you've been trying to remove the silly round nut from the microphone jack, and want a better way than paying a Kenwood repair facility to do it for you, here's your last chance to get the right tool (from me, anyway).

Even if you DON'T need to remove it today, if your rig has a lithium battery inside the front panel, take my word for it, you WILL need to remove this nut eventually. If you're lucky, it won't be jack-hammer tight, and you can turn it (carefully!) with the tips of a needle-nose plier. Otherwise, you'll need this tool.

The deal: For $34 (money order or cashier's check, no cash please) I'll ship you your very own nut tool, to keep, to cherish, TO SHARE!!! If you don't like it, return it unharmed and I'll refund your money, less freight.

That's the best deal I got, and I ain't gonna get rich on this one, I do it simply to stick-it to the "establishment" that wants to charge upwards of $90 to loosen a nut. It's my hope that you will SHARE the tool with your fellow hams. To someone who finds themself (as I did) with a rig that has "lost its memory" and has a nut that's been tightened by a gorilla, you'll be an absolute HERO!

If you're interested you can contact me via mail, email, or phone:

Neil Rosenberg, N1DMA
NeilR@innermedia.com
60 Plain Road
Hollis, NH 03049
(603) 465-2788

The supply is VERY limited, and there are no more after this batch is gone, so act soon. Be sure to check with me before sending any money, to make sure I haven't run out!
==========
The fine print:

I have in my posession a tool that is positively brilliant at loosening/removing/tightening those annoying circular "nuts" that you'll find on various Kenwood rigs. Yes, you know the ones I mean, the ones that no amount of coaxing with the tip of a screwdriver will budge. I've been told (but haven't confirmed) that the same nuts are found on many Icom, Yaesu and other rigs.

Why on earth would you want to remove this nut, you ask? Well for most of the affected Kenwood rigs, it's the ONLY way to get to things like digital front panels, lithium batteries, and so on.

You can see a photo of the tool at:

http://www.mv.com/ipusers/innermedia/kenwood/spanner.jpg

Disclaimer:

I make absolutely NO warranty as to the applicability, performance, or safety involved in using the tool I send to you. If you damage your rig, or yourself, that is totally your responsibility. If you void your warranty, that's also your problem. THINK BEFORE YOU ACT!

If the tool is not as I described it, if you chicken out, or if it doesn't fit your rig, contact me, and I'll refund your entire price (less my UPS cost) as soon as the tool is returned to me undamaged. In other words, treat me fairly, and I'll return the same.

Neil, N1DMA

I have an Alliance HD-73 Rotor for sale. This is
the large, heavy duty rotor that Alliance sold -- not
one of the small TV rotors. It is rated to turn 10.7
square feet of antenna, and features two speeds.
One is the normal 1 RPM like most rotors, and the
slow is about 1/2 or 1/3 of that. This one is in good
shape, working fine. Manual included. $ 140 plus
shipping from Florida.

Thanks.

I have a Data Precision Model # 248 Red Display Mutimeter
I need the Battery Pack or a Picture of one so I can build one.
I can not locate Data Precision, (out of Business?)
I don't even no the voltage, nothing on the ac adapter charger
or the Multimeter itself.
Appreciate any help.
I can send a photo of it to anyone who might have a idea.
Thanks to all,
Bill

One thing that XE2ZL pointed to me several years back were the west
coast and Hawaii en route facilities were in the 6 - 10 MHz ranges. You
could hear the SELCALs, FLs and, position reports running back and
forth.

To those who've not visited my Kenwood Pix site, here's the scoop:

(Ages ago) I was shopping for a used Kenwood rig, and didn't have a clue what an 850 versus a 440 versus etc. looked like, and Kenwood "ain't tellin". They only list information on their newest rigs.

So, I started a collection of pictures of many of their "classic" rigs, and put it up on a web site for all to use. It's still there, and you are all welcomed to visit. It's strictly not-for-profit.

The site address is:

http://www.firstname.com/kenwood

And, if you've got a better picture than one I've put up, or a picture of a rig that I don't have, please email it to me and I'll place it on the site.

Best regards;

Neil, N1DMA

No I've E-mailed Yaesu tech support and they assured me it is not a
problem at all. The icon comes up when high current consumption
occurs, such as TX'ing on the high power level and even then it
appears as a "full" battery and eventually works down to an "empty"
battery icon.
It's a great radio.

George,

I just picked up my first ADI radio from a local amateur friend. I was a little concerned about not hearing the name before. All I can tell you is that I ran into a problem with the radio, and called the tech support number on their web page. The phone was immediately answered by a human, and I was transferred to a tech support person, who was able to answer my question in about 30 seconds. I was not put on hold, nor did I have to touch-tone my way through a machine. In my opinion, customer support is a major factor to be considered when buying anything, and after this experience I wouldn't think twice about buying another ADI.

I hope this helps!

I have an ADI AT-600 and it has performed flawlessly since I bought it, dropped it, used it. No problems. When I dropped it, it was onto concrete from about 3-4 feet up and it did break the LCD (fell directly on the LCD), but I doubt that any other brand would have acted any differently. I sent it in for the repair. The repair technician was very good in communicating and was shipped back in about two weeks. For the price, they have great value. I would buy another.

From: Neal S Layman <N4XU@worldlynx.net>
Message-ID: <JOIw3.102$Xm2.14888@typ12.nn.bcandid.com>
Source record: 100293

Yaesu FT1000MP - S/N 8J330138 - Manufactured 9/98 - Includes the following:

YF114CN 250 HZ CW Filter
YF115C 500 HZ CW Filter
SP-8 Matching Speaker
MD100xx Microphone
Boxes and Manuals, accessory bag (connectors, fuses, etc.)

Price is $2800 plus professional packaging/shipping US lower 48.

Radio has about 50 hours of use - I am original owner - not a scratch on it anywhere.
Will consider the following as partial trades, but the trade must be in same condition as the MP - basically MINT: Late S/N Kenwood TS850SAT, CW filters, SP31 Speaker, MC80 Mic, no mods. Or VERY LATE S/N Kenwood TS940SAT, CW Filters, SP940 Speaker, MC80 Mic.

Tnx for taking time to read this post - 73 - Neal - N4XU

Bill:
I think it used a flat pack of 3 or 4 sub AA NiCad batteries, maybe 4.5 or 6 volts worth. Could be 7.5, but I would not try that much voltage if 6 works. Try a variable DC supply at 4 to 6 volts. The pack had two flat contacts on one edge as I recall. Slipped in the slot which is revealed when the back plastic panel is removed. It may not run on DC through the charger jack, if it has a limiting resistor. It has been 20 years since I last saw one, but they were good meters for their time. Good luck.

Don't bother them with the facts. I pointed that out to them weeks ago but they don't seem to understand that the prices for the gear is more than much newer models in the same line...

I sure don't understand why they don't get it... Maybe they really don't want to sell them???

I'm not too worried: it's a 1981 F-100 (not even a '150) with about
like 150,000 miles on the speedometer and rust popping out all over
the chassis. It only gets about 12 miles per gallon, and that's
downhill and with a trailing wind; and don't even ask how fast it
can(n't) go uphill with a headwind!

Run it at low power setting (the rig) and you may be OK.

Otherwise you will likely blow a fuze in the power supply or line to the
rig (it is fused, I hope).

4554. Kenwood PG-4P Cable Question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-25 00:00:00 UTC
From: Jeff Gibson <GIBSONJW@worldnet.att.net>
Message-ID: <37C4AEC9.DD4D6D75@worldnet.att.net>
Source record: 100087

I received my PG-4P cable today, and to my surprise (and shock) it comes with a 25-pin female connector. Since my PC only has 9-pin connectors for the serial ports, now I need to purchase an adapter before I can use this thing.

My question is: Do I get a "regular" (standard off the shelf) 25P - 9P adapter, or is there a "special" version required? I would hate to burn it (the PG-4P) up with the wrong one. And since Kenwood does not mention the fact that you even need an adapter (or what type to buy), it just adds to the confusion. I can't believe they wouldn't throw one in for $30.00, but I guess they think that most users still use the 25-pin interface. Enough flaming.

Thanks for any help in advance!

Hello, All!

OK, after years of using Hustlers, a Bug Catcher, homebrew screwdriver antennas.a Drake that I would kill to have back (stolen!), and a motley collection of Hamsticks (mounted 4 or 5 at a time for the PA QSO Party), I think I've decided to get an SGC QMS-2 with their 303 whip.

The NSA boys that I am aquainted with swear by the thing, except for the nasty RF burn from touching the original 9' SS whip that they were using when they got it... but they use it fixed, or at least semi-fixed. (BTW...the RACAL was on the floor, and the boys were using an ICOM rig...your tax dollars at work, huh?).

Anyway, has anyone here used one of these things mobile?

I'd like to get a few opinions before I plunk down the equivalent of a decent used rig for a radiating dummy-load!

73!

Mirage B2516G 2 meter amp with a gasfet pre-amp. 25 watts in will get you 160 out. It is in excellent shape including manual and schematic.
This is a pre MFJ amp. I'm replacing it with a 10 watt in model. The asking price is $200.

Thanks & 73,
Kevin kknickelson@mmm.com

4560. WHERE CAN I GET ICOM PARTS ???

I recently bought a used Icom IC-275h 2 meter all mode rig. It is
mising the strap on the side of the case. I would like to purchase one
to make the radio complete. Does Icom have independent parts dealers
like Kenwood does, or do I have to order it direct ??? Does anyone
have phone numbers ???

SHURE Model 514B Omnidirectional Dynamic Microphone, Low Z, Push-to-Talk Switch. This mic has a 1.5 meter XLR coiled cable attached, and ready for use. NEW, NEVER BEEN USED, (purchased as talkback mic but never installed). Frequency Response 100 to 6,000 Hz. The 514B provides a tailored frequency response for smooth, clear voice articulation. It's compact styling makes the 514B perfect for applications where an unobtrusive, comfortable-to-hold microphone is required. This mic lists for $80. I have 2 of these, and my price is $40.00 & $5 priority mail shipping ea.

I own one of these. When it first came out it seemed incredibly inexpensive, so I thought, what could I lose and bought one for my son. If works well for communication in shopping malls, etc. If you are looking for an emergency radio, this may not be the one for you for several reasons. First, the power output is only 300 mw and the antenna is recognized by Alinco to be not very good (I discussed this with their rep at Dayton once). Without physically modifying the radio, you can't use an external antenna on it. In a car, you might want to use one of the tiny MFJ mag mounts, which could also be stored in the glove box, but you won't be able to use it with the Alinco. Also, if you really need 911 (which can be dialed up on most repeaters) you won't be able to do it with this radio because there is no touchtone pad.

I would look at either one of the really cheap 5 watt HTs that are now available (there are some at just about $100), or else I would look at the used market.

One other thing to think about... 2 meter mobile radios have gotten incredibly cheap. The venerable Kenwood 261, for example, which is a high power mobile radio, was selling NEW at Dayton for $150. With 2 meter radios this cheap, it might pay to get one for each vehicle.

I just replaced the lithium battery in my TS-440. This is a CR-2032 3 Volt coin cell and is available in horizontal PC mount configuration from Mouser electronics for $1.43. Actually what I did was to use the slightly larger CR-2450 (available from Wal Mart) and soldered in the matching button cell battery holder. This was a good match to the battery leads extending up out of the CONTROL ckt board. There is a metal shield covering the CONTROL board which allowed sufficient clearance for the CR-2450 and socket. But to be safe, I applied a couple strips of black tape to the shield to guard against accidental shorts to the battery.

The most time consuming portion of the project was simply to find the location of the battery. The service manual didn't address battery replacement. The instruction manual suggests having the battery replaced at a service center. However it did have an unidentified sketch of the battery on page 29 where it discusses installation of the IC-10 interface kit. The procedure to access the battery is given on the same page under 6-3-1. Installation, which explains how to open up the front panel. Replacement is fairly straight forward and afterwards, reset the CPU by pressing A=B along with the POWER ON switch. The rig should then power up on 14.000 MHz.

As a TS-440 owner, I'd be supportive of a site that documents problems and solutions. I do have the service manual but it's written on the assumption one has already attended a course in theory and repair :-(

Source record: 100150

I can still remember the day in 1957 when I went to the FCC office to take the exam. I even remember the first few words "Turning westward towards 070..." I also had to draw oscillator circuits, a modulator circuit, power supply etc. The paper was nearly soaked through with sweat. Back then it was the price of admission to the group. I feel that most of the animosity is caused because the "Newbys" get into the movie cheaper than we did.

Is it their fault? Nope! Thank folks like Gordon West ET all , remember when they published the answeres to the test! Gnashing of teeth could be heard coast to coast.

I have been a ham since 1958, I have seen a number of modes and regs come and go. The only thing that will ruin ham radio is the anamosity towards new hams. I enjoy CW, but then again I enjoy a hot cup of coffee. Both have the same relavence. Let's get on with the business of elmering the new guys no matter what route they took to get here, Us "Old Farts" are dieing off and decreasing in numbers, best we get the new guys on our side. Hi Hi.

The upshot is the rules have changed, hardly anyone builds their own equipment, (I claim a personal exception - all homebrew except an old 75A4 receiver) , or gives a flip about code. Change is here to stay!

Best 73's to all

I preparation for retirement a few years down the road, I'm following my wife's instructions and accumulating my toys while I'm still working and can afford them. The next HF rig that I buy will most likely be my last, so I want to be careful.

I thought the Pegasus would be a really nice way to go and was ready to call in my order, when I began comparing the specs with their other rigs, and my own fifteen year old Yaesu FT-757. For a inovative design computer controlled rig, I was disappointed with what I saw. Since they have sold out the first production run and are now taking orders for delivery at the end of September, there are a lot of people buying this rig. Do they know something that I don't? Does DSP change the way we evaluate the numbers for sensitivity, etc?

You left out the Kenwood TS-140 (discontinued about 3 years ago), I is
still an excellant radio even today for beginners. I was my backup rig
that I used mobile and digital for nearly 10 years without fail. They
can be had for 450 to 500 bucks today.

Hi Gang - Please accept this reminder of the following item which
appears in the rec.radio.swap FAQ/charter:

"PLEASE DO NOT POST DISCUSSION ARTICLES TO THIS GROUP. If you really must
post, please do so to the appropriate discussion group. Use email whenever
possible, especially if you feel someone has committed a breach of
etiquette."

(The full FAQ is posted by myself on the 15th of each month.)

For a smoother-running newsgroup, please abide by the charter.

Jeff KH6O (rec.radio.amateur working-group)

Nope. The CTCSS tone is selected via a exposed DIP Switch on the bottom of the radio.

If there is one thing that is a BIG Negative, thats it. Everything else about the 70T/TH is great.

FT-100 like new, in the box, with all papers and blank warrenty card.
AM filter installed and open HF mod done by vendor.
FC-20 antenna tuner is also like new in box but no papers. It is fully
automatic and plugs into the FT-100 pigtail socket.

FT-100 $1150
FC-20 $150
Both for $1100

I would guess somewhere between $1200 and $1800.
Consider that new tubes are about $300 each and that amp uses three of them.
A real expense if they ever need replacement.

$149 US, I presume? The funny thing is, you're posting from the
GTA and there is another guy in the GTA (Steve Mane) that posted the same
scanner for sale last week for $90 Canadian (about $60 US). What's really
curious is that your forsale post and his were the same, word for word. Go
to Dejanews and look for message ID <37b519eb.24232558@news> if you don't
believe me.

So, what's up with that?

4596. Re: FT8100R cross-band?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-25 00:00:00 UTC
From: Max Imo <reply@to.group>
Message-ID: <LO_w3.75$Cn4.7962@news.corecomm.net>
Source record: 100224

You can set up the FT8100 radio for one way or full cross band.

One way - radio receives on 440, transmits on 2 meters. The radio will NOT transmit a signal being received on the 2 meter side.

Full - radio receives on 440, transmits on 2 meters OR receives on 2 meters and transmits on 440

Advantage of one way - where you can hear the repeater on your hand-held but the repeater can't hear you. Set up this way you could make phone patches.

Advantage of full - when you cannot hear or transmit to the repeater. You can't make a phone patch. You can't transmit until the repeater you are working stops transmitting. That's because as long as it's transmitting, your FT8100 is transmitting on the 440 side.

I would not recommend running the radio at full power when running full cross band. That is 100% duty cycle, and if the radio is in a hot car it may not survive. You might want to consider car battery life if you run full power on one way cross band.

I run both an FT8100 and an FT8000 on cross band every day, and have great success with it.
LOL

Sorry I beg to differ with you and agree with Brian.

I have been using the ATAS now for several months. I have made more contacts with it than I did with several mobile antenna over the last couple of years. This includes mobile to mobile with a JA station. I would very much like to see you accomplish that with a wet string.

Finally, your comments about it only being good for VHF and UHF makes me wonder since it actually is not the best of on these bands.

My opinion!

JR,
I second the TS-140....my first all solid state, digital readout rig after a lifetime of tubes! It's lack of crazy menus is, in my opinion, a *feature*! And for me, just the right amount of memories. My only complaint is the slide pots...the contacts need period cleaning. Other than that, a clean, simple, solid radio. I now use mine for back-up purposes and have no intentions of selling it, even tho it is 10 yaers old now and I can afford to spend much more (but don't need to...!)
Tom
N2LDE

Consider the TS-430 or 440. Those radio will still hold their own even
today.

4604. Re: This is Ham Radio now?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-25 00:00:00 UTC
From: Mark W4MRK <kg4adc@northstate.netSPAMBLOCK>
Message-ID: <7q287bcfi1@news3.infoave.net>
Source record: 100232
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

If I may be so bold to point out something that is obviously
being overlooked in this pointless debate. All of the trouble makers on the
low bands are Generals, Advanced, or Extra class operators. These hams know
code and I would not give you a plug nickel for any of them. I started as a
no code tech and had no original desires to learn code, but I fell in love
with ham radio and spent a considerable of time struggling to learn the
code. If I had of had to learn the code to ever get my first liscense, I
would have lost total interest and found something else to spend my time and
money doing.

I believe that it is the negative comments that you and others like yourself
make that is a bad reflection on amateur radio, not the relaxation of the
code requirements. Further more, your negative comments belong on 11 meters
and not here with us hams.

Just my 2 cents worth
73 de W4MRK

Glad you like it John.
Wouldn't it be a sorry state of affairs if everyone liked the same
equipment.
Variety is the spice of life.

That being said there is still the laws of physics to contend with.
All other things being equal the mobile antenna that is nearest to a 1/4
wave in size will transfer the most power to the air. In other words the
ATAS is too small to compete with any antenna larger than itself.

4607. VX-1R MARS/CAP mod?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-25 00:00:00 UTC
From: Bob Cobler <cobler@gv.net>
Message-ID: <rs9a0mn27r57@corp.supernews.com>
Source record: 100235

Can the VX-1R with version 106 (current version) firmware be modified to operate on extended transmit (MARS/CAP)? I've tried to do it with ADMS s/w and template modifier s/w to no avail. Note that I am not talking about "freeband" or cellular mods--just the slighly extended tx range for MARS/CAP. Earlier firmware versions seem to work fine. Maybe I am not using the right version of ADMS or Template Modifier?

tnx

4608. Re: Ebay and Sales to Non-Hams

SOOO--- you're saying a non-ham shouldn't acquire any ham equipment or familiarize themselves with transceivers before they get their liscense. Obviously no ham operator EVER had equipment before being licsenced for it------is that correct?
radidio

Hi All,
thank you for reading this NON COMMERCIAL message.

I'm looking for info about TS 440 S like follows:

-mods and improvements you have personally experienced or heard about;

-troubleshooting or problems you managed to solve on your own.

All this info will help me to create a web page about ts-440s .
Please help me to make this site as complete as possible.

The site will be free access and the information will NOT be used for
commercial porpouses but only for electronic experimentation.

Please, if you have some info, just send me an e-mail to :
dcl@ascu.unian.it.
Just send me a short summary of what you experinced. I'll chech this info
and, if what you sent is something new, I'll beg you to send me the
complete description of your experince. This procedure avoids to have a
lot of articles dealing with the same matter.

Thank you and 73.

4612. Those #$%$ tabs on Kenwood HT batteries

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-25 00:00:00 UTC
From: pklein@2alpha.net
Message-ID: <37c35c21.2189011@news.2alpha.net>
Source record: 100304

I recently acquired a Kenwood G71a dual-band handheld. I like it very much except for one thing--the both the Kenwood and Maha batteries for it have little tabs that stick out sideways a couple of mm on the bottom. I guess they are to fit the battery snugly into the Kenwood rapid charger. However, they also stick very nicely into my hand when I'm using the rig. Ouch!

I have a Maha charger, so the tabs are of no use to me. I'm tempted to saw/file/sand them off smooth. However, there must be a better way to save my palms that doesn't involve mutilating either me or the battery. The Kenwood "soft case" for the radio doesn't really fit with the bigger batteries.

Has anybody else had this problem and come up with a non-destructive solution?

The Specs are incredible for the selectivity on SSB. If they are true the review in QST will be great plus the DSP is 32 bits.
I know the MFJ DSP is 13 bits and the TIMEWAVE is 16 bits .I think the Kenwood TS870 is 24 bit DSP.

Hi:
I have an opportunity to acquire for free and old Wilson 61 foot crank up tubular tower... it looks a lot like the U.S. Tower MA 550 model. However, the winch is broken. Does anyone know what happened to this company or where I might be able to obtain parts? I sure would like to buy one of the free standing tilt over bases for this tower if possible.

Any leads would be greatly appreciated.

Not sure if this will do it for you, since you specify "mobile" ,but the
Yaesu FT-51R is a dual-band HT that will do one-way or bi-directional
cross-band repeat, with CTCSS encode/decode, too.

4619. Radio Shack scanner model PRO-2036 for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-25 00:00:00 UTC
From: iden <iden1000@hotmail.com>
Message-ID: <40Lw3.1263$k7.99348@quark.idirect.com>
Source record: 100311
Cross-posted to: alt.ham-radio.marketplace,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.scanner,rec.radio.swap

I have a Radio Shack scanner model PRO-2036 for sale. Features:

- 200 Channels (10 banks of 20), 10 priority channels w/5 year memory backup
- Large adjustable backlit display
- "shortwave" style rotary tuner for manually scan channels/frequencies
- Hyperscan allows 100 channel/step per second scan speed
- Dynamic Frequency Storage lets easily move frequencies around, and also prevents entering duplicates
- CTCSS tone squelch handy for receiving business and amateur radio bands
- One touch weather band access w/weather alert tone
- Auto-Store feature quickly finds and stores active frequencies in channels within selected banks.
- Auto-Record option allows unattended recording of action on favorite frequencies to tape recorder with remote.

Coverage:

29-54 Mhz, 108-174 Mhz, 216-512 Mhz, 806-823.9875 Mhz, 849.0125-868.9875 Mhz, 894.0125-956 Mhz

For those interested, the cellular ranges are locked out, but the radio picks up cellular crystal clear on the image range between 900-920Mhz.

Comes with scanner, power supply, box, manuals .

I'd like to get $149 for this but will take offers. If you're interested please email me at iden1000@hotmail.com Thanks.

4620. GPS $20.00 Project Comes Throught The Rollover AOK

Does anyone have an opinion on how good the Alicno DJ S11 2 mtr radio is? I think it might make a good inexpensive emergency radio (keep it in the car, etc.)

I was looking at them at Fry's in Fremont, CA, but the boxes had all been returned and the instructions were sort of flaky.

Emails appreciated, but will check here also.

Excellent condition, a couple of small scratches on the top is all.
Puts out full power. Has internal antenna tuner. No filter but can hold
3 at a time. Comes with a Midland desk mike, instruction and
programming manuals plus power cord. I don't have the box or hand mike,
never got them.

$700. including shipping and insurance to your QTH from Quebec, Canada.
No problem in shipping to the U.S., have done it lots of times.
email me if interested.

From: Lee Barnett <lbarnett@claimsware.com>
Message-ID: <rs7nlk8j7r18@corp.supernews.com>
Source record: 100325

Is there a way to store the CTCSS frequency in a memory channel? The best I can determine from the manual is you must set the CTCSS frequency with the thumb wheels and that the radio operates with that tone (once you turn the tone encode on). If you want to change CTCSS frequencies for another repeater you go back to the thumb wheels. This is real problem since the rig is mounted under the back set.

Did I miss something in the manual?

Unfortunately we are. And also unfortunately the 'newer' high class
licensees are more that than anything else, using expertise at CW
to blast their way up there, but most having little or no skills with a
soldering iron. I'll bet most could diagnose let alone repair a simple
blown amplifier in a PLL error amp loop.

Unfortunately, people loose sight of the fact that a HAM license is, in
my
mind, an ENTRY exam to the hobby, not a final exam to grant absolute
rights. But too many people act like it is.

Source record: 100327

Hi,

I can't comment on the quality of the radio, nor the ease of programming, but I can tell you that you can most likely find a better price than Fry's. The Frys in Phoenix has a tendency to be at least 10% higher than anyone else. By buying at Ham Radio Outlet, I saves almost $100 on my radio.

Alinco has a reputation for inexpensive, easy to operate radios, this one is probably no different.

4636. ICOM memory board

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-25 00:00:00 UTC
From: Nardo' Roberto <nardo@pv.infn.it>
Message-ID: <37C3EF13.2C01@pv.infn.it>
Source record: 100328

Hello DR OM
I'm Roberto IK2RND , I have realized a replacement board for EX-314
MEMORY BOARD installed in these Icom rigs :
IC-745 IC-751 IC-751/A ICR-71A/E IC-271A/E IC-471A/E IC-1271.
My board called EPROM/RAMBOARD definitely solve the problem related
to the lithium battery fails. When battery fails the rig stop to work
and you need to send your radio or EX-314 board to the Icom service
center to replace battery and reprogram the memory.
Data in the my board are stored in an EPROM chip the RAM is used only
to store the 32 memory channels.

73, Roberto IK2RND

I have a ICOM 740 HF mobile rig that is in good condition. It has all the amateur bands. puts out 100 watts. I would like to trade it for a 2 meter all mode base rig or I will take 400 bucks for the rig. The rig comes with mic and owners manual. It is a great rig for mobile operation. Its a 7 on the scale of 1 to 10. I ran the rig mobile but I have upgraded to a continuos coverage rig.

Source record: 100331

Hi Jason....my hobbie is buying and selling ham gear....so I can play with and evaluate it, and its just my nature....You are correct about the 725, although now you can get an older 706 for $650 or so and its blows it away as a very useful mobile rig...but in the category of the $500 radio....nearly everything over10or 15 years old is available....the 735 Icom , I think, is even better and they are $450-500.... Kenwood TS 530 and 830 as well as 430 fit in this category.....I sell more 830s than anythiing else as a rule.....mostly as second or back up radio...Older Yaesu' that fit would be theFT 757... and the IC 707 of course is still made but used ones are around 400...seems to be one of the better bargains....just thought Id give you my 2cents.......For overall perfomance, sensitivity and selectivity etc under $500, Id have to go witht IC 735 or Kenwood TS 830S....both are right at $500 and especially nice ones may be a bit more...also it would depend on your use for them....most of the rigs require 12VDC but the TS 830...so that really adds a nother 100 bux or so... The price of all the older rigs has dropped dramatically this past year...20-40% in fact...I suspect because of the glut and....some of the newer radios are getting very inexspensive for what they do and how they do it!!! Best used by at any price in the market today appears to be the Yaesu FT 920 though many older hams dont like em at all for thier menu driven set up...These rigs are in the $1175 range and if you take the time to set em up....are just great....Icom 746 and 756 are good too....but more money....Well, I would be interested to see others views...this doesnt belong on rec.radio.swap though....rec.radio.amateur.equipment...is the discussion group for this type thing ...something I am often told (hi hi) if I start it on "swap" hi hi....Would like to compare answers from other parts of the states...Im considered in the SW at Odessa, Texas and run two sunday swaps on the radio...one 7.245 sun AM at 10.....central...another on Sun nite 3.922 at 8PM central.....check in and see if you can hears us...gets good in the winter but summer and an amazingly OVER RATED solar cycle have kept it a very narrow audience this year...73 for now....look foreward to hearing some other of your returns ....if you would foreward them I will appreciate it and use it for an article in my two local club papers....thanks again 73 Murray Neece K5MDM Murray's Radio Ranch: Buy Sell Trade Swap Amateur Radio (Ham Radio) Equipment

PS...the ARRL has two books: Radio Buyers Source book one and two...and maybe 3....that do have a lot information on the older rigs...but no real current recommendations....helps tho...M

Hello all,

Due to 70 cm output problems with my IC-821h, I'm looking for the
schematics of this rig.
ICOM doesn't supply the schematics anymore with it's
Instruction Manual deliverd with this transceiver,
they are asking about $ 50,- for the Service Manual in the Netherlands

Who can help me with a copy (also a PART of the Service Manual via
Email is O.K.), I think the problem is on the Main Unit...

Thanks in advange, 73's de Frank PE1KNL

Email: pe1knl@nospam.amsat.org

Please remove the nospam. from my Email adress to reply...

You know, I'm really ticked off that people try to pull this
"Gotta have a HAM license" to buy something crap.

First off, there is NO legal reason for that to be so.

And what the heck happened to incentives? I purchased
my Swan before I got my novice as incentive to get it.

Then as soon as I got my novice ticket, I bought a Kenwood
TR-2400 HT as my incentive to get my butt over to Dallas
and take the tech test.

I'd have been pretty POed if someone had said wait.

And for my birthday a couple of years ago, my (ex-)wife bought
me a mobile unit. (Well, it got messed up, and I ended up
with an Alinco DR-590 dualband with all the options!) I'd have
been pretty POed if I had found out that she couldn't get me
a radio as a surprise because of some little tin-god HAM
cop at the store.

Personally, I won't patronize a business that pulls this crap,
and thankfully they are very rare. In all the years I've NEVER
been asked to show a license to buy anything.

Geesh, you think it would do something to keep the lids off the
air? What's next, registration with digital signal fingerprints of
all our radios? GET A LIFE!!

4651. A 'standard' interface

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-26 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <7q3l9p$2oj$1@holly.prod.itd.earthlink.net>
Source record: 99943

How many people realize that there seems to be a new
'standard' interface out there for headsets?

The 2.5MM stereo plug. It's used on a lot of cell phones.

It's used on a lot of standard telephones, wireless or not.

It's used on an increasing number of FRS radios.

Cell phones that don't have this interface can sometimes
get it. I just traded to a new Nokia 5120. I also got a 'hands
free' kit that was a mic-headset with the 2.5mm plug on the
end. This pluged into a little box smaller than most sugar
cubes that attached to the bottom of my phone, giving it
the standard 2.5mm jack.

And the headsets are all over the place. RS has I think 6
different versions in their new catalog, including one of the
all in the ear version.

So, when's HAM projects coming for this? I think I'm going to
do over my Gold Wing. Put a little dongle for the 2.5mm jack
for the intercom. And make up a small panel for interfacing.

I envision a panel with 4 micro knobs and a push button. The
push button selects one of the four knobs with a little indicator
showing you which one is selected. Each know routes audio
from a device to my helmet, so I can mix and control volume.
I select the device with the pushbutton, and then when I press
my handlebar mounted TX switch, the mic is now routed to that
device.

Currently I only have a Kenwood 2M rig on the Gold Wing, but with
this setup, I can leave an FRS unit in the pouch for bike to bike
use. As well as a 49mhz thing. That's 3 of the four. Perhaps the
4th will be to my cell phone, since it has 'auto answer' capability
when the headset it attached.

I guess the first step it to work out the 2.5mm jack to the Kenwood.

Message-ID: <37C558EC.9698E1A7@bangor.ac.uk>
Source record: 99944

Hi,

I've just obtained an Icom IC-761 h/f transceiver and have a couple of queries, wonder if anyone out there
may be able to help ?

The rig does not have the optional filters (FL-53A, FL-101 and FL-102) fitted. As the rig has passband
tuning and IF shift is it worth fitting the extra filters ? I mostly use cw so the ones to fit would be FL-101
and FL-53A. I used an Sommerkamp FtOne for a long time and generally used the passband tuning instead
of the crystal filters. Anyone any ideas on where to get suitable filters for a reasonable price. As DSP
becomes more popular I wonder whether crystal filter prices will drop...

I also notice some audio hiss when the rf gain is backed off and find that this comes from the voice synthesizer
unit - turning up the voice (!) turns up the residual hiss, turning it down does the opposite...

Thanks and best 73's,

John.

I believe there was a review of the Pegasus in qst last month, which
should cover how good the specs are.

As for going with the Pegasus, since this is a rig you want to hold on
to awhile, it might be better to wait a year or two for them to work
the bugs out of it -- there's bound to be some, considering the high
degree of computerization involved.

Or, if you can afford about twice the money, the Kachina has gotten
awfully good reviews and word of mouth.

(You might also do a search in Deja News -- there was some talk about
the Pegasus rig in this newsgroup about a month ago, complaints that
the receiver section may come directly from the inexpensive ten-tec
swl digital receiver...)

You can buy an air scanner. Sony used to have the air-8, a great scanner for air, police, etc.. Not too expensive. I used to own a rigged ham radio that could broadcast on ham and business band. These were a must for paragliding and hang pilots because official events took place on the business band but normal chase took place on ham.

I have for sale a SGC-2000 HF transceiver with the standard head and the Power Talk DSP head along with the SGC-230 antenna tuner. I'm asking $ 2200 for the package. Everything is good condition. Non-Smoker owned.

Listed below is the current prices in the AES Catalog.

Please e-mail jim@futurevision.net or call me at 517.750.7580 for more details.

As in AES Catalog:
04-01 SG-2000 150W 1.8-30MHz Xcvr $1429.95
04-22 Powertalk remote head $799.95
04-12 Remote Kit w/ brkt & cable $179.95
54-12 SG-230 Antenna Tuner $489.95

$
2899.80

Close but no cigar.
Older PCR1000s allowed you to change the data with a software program,
but at some magic point they changed the circuitry to block re-writing
the EEPROMs. There is a simple mod (remove 2 0ohm smc shunts),but while
not all that hard, one could ruin an otherwise good radio.

I have the same experience in repeater maintainance. The one guy who helps out the most is a 17 year old codeless tech. The adv and extras just never can manage to find the time/inclination. Me, I'm a tech plus.

Repeater is in great shape and works well.It is presently all boxed up
to ship.2 people have
stated they wanted to buy it and it was a done deal,but after no hear
for a week they
replied they could not raise the funds.So i will try one more time
because it seems a waste
to break it up and sell it .It will bring more in pieces but putting
together a package like this is not easy.It consists of the following.

2 ea Yaesu FT912R transceivers.
1 ea Sinclair 4 cavity pass/reject duplexer
1 ea 1 watt in for 20 watt out power amp.
1 ea ACC RC-850 controller (ver 3.6 with rack mount,display front
panel,autopatch,
computer interface and etc.)
All cabeling to interface controller to radios.

Package is $1700
Will sell without controller for $1000
Will sell the controller for $700
Will not break down further,could do some tradeing.
Thanks Al

I need to do an eet project for one of my college classes and I was considering a ham radio kit. I have heard of people talk about ham radio and thought that it might be a nice hobby to get into. I think this required eet project might be the opportunity to actually get involved in ham; however, I know nothing about the radios. I've looking up websites and can only find business advertisements & such. Anybody know of any good sources(web sites) that start at the basics. Anybody know of any good kits for an intermediate level electronics person. I need something a little more advanced than the kit radio shach tried to sell me. It was for ages 10 - 12 or something like that. bye.

Mike -

You must not be old enough to remember a time after WWII and into the fifties when a license was required to buy ANY kind of radio equipment or part. This even included things like resistors and capacitors. I can remember driving 40 miles into Los Angeles just to buy a vacuum tube (after showing my new license of course.) Thank goodness it's not that way any more, but I guess you would have been pretty mad then too!

Dick Hughes - W6CCD

4679. WTB CW filter for Icom 820H

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-26 00:00:00 UTC
From: bvkirk@kanza.net
Message-ID: <37c5bc12.37798148@news.kanza.net>
Source record: 99971

Looking for the CW filter and anything else you may have for the Icom 820H 2m/440 all mode.

email bvkirk@kanza.net

4680. FS KAM Plus

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-26 00:00:00 UTC
From: "L. E. Dietrich" <lou-nn2g@worldnet.att.net>
Message-ID: <7q4fle$3gb$1@bgtnsc02.worldnet.att.net>
Source record: 99972

I have a KAM Plus with all the cables and Hostmaster software and a firmware upgrade it is V8..(firmware not installed)

I bought it off someone, hooked it up to make sure it worked then put it back in the box! .I am used to my PK232 and didn t want to switch!

It is in excellent shape and just sitting here..$225...

4681. Timewave or MFJ DSP ?????

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-26 00:00:00 UTC
From: Jimbo <jbollit@ix.netcom.com>
Message-ID: <37C5C2F0.EB07B08A@ix.netcom.com>
Source record: 99973

I am thinking of buying a DSP unit to add on to my Drake R8b receiver
and would like some input from users of the MFJ 784B ($229.95) and the
Timewave ($399.95) DSP units.

The MFJ was written up in the latest Monitoring Times and had a good
report ......
but would like input from others that have used either or both as to the
plus's and minus's of each.

I do mostly shortwave and BCB DX'ing with the Drake. I use a Kiwa Loop
for BCBDX and an MFJ noise canceling unit.

Thanks in advance.

Jim

William,
Looks like a difference of opinion regarding the ATAS. As for it being good only on UHF and VHF, I'll challenge that any day of the week! I've worked on a DEAD STOCK FT-847, using the ATAS with the ATBK-100 and worked most of the northern hemisphere. I've been mobile and worked into Iceland, I even went portable once and got into Spain on 20m. If that's a wet string, STOCK ME UP, I'll take all I can get.

Brian

Just back from Yaesu for repair to 10tr FM Top of case damaged in shipment and Yaesu put a new top cover on it so it is obviously a little lighter in color than the original 17 year old bottom cover. Rig has ALL FILTERS, AM,FM,USB,LSB,CWW, CWN plus the CW filtering down to about 100 hz and shift will knock off a cw qrm 100 hz away from you. Continuous coverage receive 100 khz-29.999mhz. will transmit everywhere it receives except for the U.S. AM Broadcast band all optiones are on this rig and all updates by Yaesu. Mike and power cord.700.00 plus shipping.

From: Bob Raymond <braymond@iea.com>
Message-ID: <_Llx3.86$g36.6726@sea-read.news.verio.net>
Source record: 99986

It's not a matter of discrimination. It's a matter of not wanting to sell something to someone who might use it improperly or illegally.

HAMS have prided themselves on self-policing the service. Yes, we are very limited in what we can do, but not selling a transmitting device to someone that has no legitimate purpose might be one of them (in my humble opinion). It would also allow me to sleep a bit better and look my fellow ham in the eye.

Now, I'm not a lawyer, so I can't say whether or not you could be sued for refusing to sell something in a public forum. I would think that it would depend upon the circumstances. I do know that the Seller sets the terms and conditions of the sale, not Ebay or the public.

I think common sense has to prevail. When in doubt, don't. It's worked for me for quite a few years now.

73

KG7WC

it's capable of emitting a signal on the amateur radio bands then I feel a moral obligation to make sure it falls into the right hands. That could be a short wave listener or a prospective ham...you see it's not a matter of discrimination, but of conscience.

As to it being improper to not sell to the high bidder, I think that's debatable. The seller sets the terms and conditions of the sale, not Ebay or the public. Obviously you are NOT a ham, because if you were you would understand that our fraternity is self-policing. We do not rely upon the FCC to get the job done.

I have a ICOM 740 HF mobile rig that is in good condition. It has all the amateur bands. puts out 100 watts. I would like to trade it for a 2 meter all mode base rig or I will take 400 bucks for the rig. The rig comes with mic and owners manual. It is a great rig for mobile operation. Its a 7 on the scale of 1 to 10. I ran the rig mobile but I

have upgraded to a continuos coverage rig.

Can you say "Urban Myth?" Sale of anything by a private party does not constitue a "public accommodation," and so would not be judged in the same way as,say, a sale at Walmart.

It is a big problem and it appears Alinco added the CTCSS tone pwa as a AFTERTHOUGHT when they designed the radio. It is wierd that owned a Alinco Dual Bander for 5 years prior that had the Tones selectable from the front panel plus you could store them in memeories if you chose to. Shame on Alinco. However, there is a closeout at Tech America for the Original Alinco DX-70T for $599. Not bad.

Source record: 100112

Hello,

I have an ICOM 725 that I am looking for a pair of headphones to use with. I have been practicing the code and need something to block out background noise (kids and pets oh my..!) My rig has a normal looking "PHONES" jack on the front of it. I am not sure what the technical name is for this sort of jack. It is larger then a "walkman" headphone jack.

I am looking for a quality used pair of headphones...

Thanks,

Jason S. Hulet

I've long since misplaced the manual for my R600, but as I recall it doesn't cover DC operation except to state that an adapter is available. Kenwood no longer supplies the adaptor, but you can connect a 12/13.8V DC supply using a connector on the PLL (Phase Locked Loop) board, which is on the bottom side of the receiver at the front. Both connectors 7 & 8 may be used, but the latter is preferable as it has diode protection. Despite that, I would still take care to observe correct polarity; you should be able to see which of the pins runs to earth. Hope this helps!

From: Magne Meldal <magnem@contec.no>
Message-ID: <JV7x3.4656$Ffg.189500416@news.telia.no>
Source record: 100119

Hi,
I would like to make a 12v (to use in a car) charger for a Yaesu FT-11R.

I need to know where to connect, what the voltage and currend contitions should be like, and if there is any "intelligence" in the unit itself, or if the charger should take care of shutting off.

Battery pack is FNB-31, 4,8v 600mAh.

Are there any web sites with this kind of documentation?

MM

Just one final note. Your observation of relative size is fine assuming
both antennas are equally well engineered and constructed.

I would agree with Evan. I have a pair of Yaesu headphones, which are pretty good. But the large Heils are better. And, you will appreciate the mic as well.
The connection on your rig should be a quarter inch headphone jack. Same that has been used for decades....Some new rigs are using the 1/8 inch mini plugs.....a pain in the neck when you don't have an adapter at the ready!

Well Mark..you make some points worth noting. There are without a doubt a few bad operators on the hf bands. But I stress the word FEW. They are not a good reason to open the flood gates to everyone who has a check book. That is what I'm against. I think everyone will agree the next step..like it or not.. is the code requirement for general class being lowered to 5wpm. Although I'm not in favor of that change...I can live with it. At least some effort will be required to obtain hf privileges, and with that effort comes VALUE. The reason the CB band is a mess is cause all it takes is money to operate. They have nothing to lose by acting like they do. The FCC is now starting to clean up the FEW bad apples we have on the HF bands. Lets keep the standard high..and the hobby worth being involved in.

I'd rather have ham radio die a slow dignified death..than turn it into channel 19

4733. Re: Ebay and Sales to Non-Hams

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-26 00:00:00 UTC
From: Don Vlack <k2dv@rochester.rr.com>
Message-ID: <37C52FF9.4AC427B3@rochester.rr.com>
Source record: 100129

While you're wondering if Ebay, or people on this list should sell ham gear to non hams, are you people also picketing Radio Shack, HRO, AES or any other business that sells any legal product to anyone with a credit card or cash? Are you so concerned you wouldn't want your wife to be able to get that shiny new rig for your birthday?
This discussion made the rounds when Radio Shack started selling ham gear a few years back and didn't require seeing a ham license. Nor did anyone else.
As far as the potential misuse of the frequencies goes, I think we have more of a problem with the people that are licensed and are jerks than those that aren't licensed.
My humble opinion.

Kenwood TS-700SP 2M All-Mode Transceiver
144.000 to 148.0000 MHz in 4 bands of 1 MHz
USB, LSB, CW, AM, FM
SSB, FM, CW: 10 Watts Output
AM: 4 Watts Output

All solid state

Built-in frequency counter provides direct
frequency display precise to 100 Hz for
internal VFO, External VFO or fixed crystal
operation. 7 digit resolution.

110 VAC or 12 VDC operation

Repeater operation - Normal, Reverse or Off
provides 600 Khz shift up, down or simplex

Dual Vernier Tuning provides bandspread tuning of 25 KHz
per turn on one control with 100 KHz per turn on other.

11 fixed frequency crystal positions provide for fixed
frequency operation operation on 44 fixed channels (11
on each band)

Noise Blanker, All-Mode Squelch, RF Gain, Automatic AGC switching,
RIT, VOX Gain and delay, built-in speaker.

Built In VOX, Receiver Preamp,

Remote VFO Operation, Semi-break-in CW with Sidetone, Low Power
(1 Watt) switchable from front panel)

Rig comes with AC power cord, DC power cord, MC-30S Hand Mic with
switchable noice-canceling for mobile operation.

Cosmetics - very good for age; minor scratches.

11 crystals installed in fix board; 2 are dead
(14X.520, 14X.700, 14X.730, 14X.760, 14X.850,
14X.880, 14X.925, 14X.940-Dead, 14X.180,
14X.195, 14X.???-Dead and Unmarked

note 14X refers to 144, 145, 146 or 147; dependent on
1 MHz section of band selected.

Operating Manual with 4-page fold out schematic included.

Rig has not been used much in the past 5 years; other than for
occaisional packet and monitoring repeater. I used it mobile in
a mini-van with a SQLoop omni-horizontal mobile antenna for mobile
sideband opeation for approximately 1 year. I removed the mini 4-pin
din jack (external DTMF Pad Option) from the rear panel to install a
mini bat-handle toggle switch to allow internal speaker monitoring
when external speaker jack is feeding TNC for packet. Notes on schematic
indicate previous owner performed squelch hysteresis modification
(I think this is outlined in the Kenwood service flashes on their
site and various Mod files around the net)

$ 200.00 + shipping from Postal Code 31523

Image file of rig scanned from manual available vis email - 500K file

:AM: 4 Watts Output

All-Mode eh? So how much power does it output in double sideband suppressed carrier mode, single sideband with carrier mode, vesgital sideband with suppresed and no carrier mode, fast scan video mode, digital video mode?

:All solid state

There's a term you don't see often.

:Built-in frequency counter provides direct
:frequency display precise to 100 Hz for
:internal VFO, External VFO or fixed crystal
:operation. 7 digit resolution.
:
:110 VAC or 12 VDC operation

110 volts is only used in backwards countries.

Barry

For sale:
Headphones with boom microphone.

Jensen Model JMP-41
Headset Response is 20 Hz - 20 kHz
6' Cord with mini stereo plug.
Microphone is Low-Z Condenser type with 2.2 k-ohm impedance.
Response 30 Hz - 16 kHz

Durable and comfortable design with padded ear-pieces, ideal for
communications applications.

Brand new in box. White color.
Great for mobile HF or VHF operating. Think SAFETY!
Also great for extended rag-chews, contesting etc.
No PTT, but has standard connectors - 1/8" mini-style.
Great for studio musicians and stage work too.
Will also work well with computers. Normally $29.95
New in box $17.00 plus shipping

ADMS for Yaesu products (as well as other programs created for
other HTs) provides you with simple, on-screen programming of not only
your frequencies, but also all the intimate settings of your radio.

An addition to the latest ADMS for Yaesu HTs is the ability to import
frequency files in several formats.

ADMS retails for just under $40.00 US. It comes complete with a serial
cable (looks simple, but there's circuitry involved in the computer
connector end).

Ham Radio Outlet stores carry ADMS, and will ship you the correct
version for your Yaesu product.

Something I forgot to mention...

The beauty of computer programming of your amateur tranceivers really comes into play when you desire different "sets" of frequencies. For example, I need to run to Phoenix, AZ again this weekend. I have a set of freqs that are programmed for theat trek...frequencies that are quite different than those I use while "local" to Riverside, CA.

I will fire up the desktop computer, plug in my HT, and re-program my radio in about two or three minutes's time - with a "set" of freqs I have set up for travelling along Interstate 10 from Riverside to Phoenix.

Source record: 99996

Brian, you CAN work stations on a wet string if it is soaked with salt water. And if all you work are the stations that reply to your CQ then the ATAS-100 is OK.

Using the ATAS-100 is like going QRP. Hey... those guys work all over the world with less that 1 watt so why do most of us use 50 to100 watts?

I work other mobiles all over the states on 20m and too many times they could just not hear me. Switch to the Hustler antenna and they could. When they did hear me on the ATAS-100 I always got a report that indicated I heard them better than they heard me. I had the ATAS mounted on one side of the van and a Hustler mounted on the other. Consider that the Hustler antenna is a so-so antenna for mobile use. Switching back and forth made a "FANTASTIC" difference at the receiving station. The closer to a full 1/4 wave antenna the better. The little ATAS-100 is just too small to be efficient. I am not saying that it has no usefulness or that you wont work other stations around the world. If you rent a car and need an all band antenna on a mag mount then it may be what you want.

I can connect a dummy load and a 6 foot whip together with a tee connector and make contacts on any band with a SWR of 1:1. But who would call that setup "FANTASTIC"?

One nice thing about the Pegasus, Kachina, Kenwood Ts-870 and possibly the NEW Icom 756 PRO is the fact all the filters are built in and there is nothing to buy. If you spend say $2000 then add the filters to a conventional radio you could hot $3000. I had a expensive radio and it bothered me thatI didn;t have all the filters so Next pruchase I will consider the IF DSP Variety. Think of the TOTAL COST OF THE RADIO WITH ALL THE FILTERS BUILT IN.
Good luck , Tim

Source record: 99999

Hey, Steve. Why would I want to add you to my address book? And, if there is no reason to add you to my address book, why would I want to see that silly button at the bottom of your message?

Besides, if I did want to add you to my address book, all I have to do is right-click in the window (or hold down the mouse button in the window on a Macintosh) and select "add sender to address book."

Since it is so easy to add a person to the address book, it seems a little silly to add a button in each message to do the exact same thing (especially when 99.9% of the people reading your message would not want you in their address book).

Just courious.

SEE--http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=151364160
Just till 9>00 pm CDT Sun., 8/29.

No longer sold on the ham market, HAMLINK is the ONLY way to
remotely control Icom, Kenwood, and Yaesu radios from a Touchtone
phone. I've used one for
five years, and used it to control my remote station to 5BWAZ! And
distance is no
object; my remote site is 500 miles away. This HAMLINK
setup is COMPLETE IN EVERY RESPECT. It includes: The HL-60 HAMLINK
Interface that goes between your rig and telephone at the remote
site; the OP-80
OPERATOR LINK that goes between your phone and mic, headset, and CW
key
at your home site; the HL-62 Interface Cable to connect your
HAMLINK to any
Kenwood radio and control almost every Kenwood function (wiring
diagrams included for Icom and Yaesu Interface Cables); RJ cables to
connect HL-60 and OP-80 to your telephones; and original manuals for
both HL-60 and OP-80. All equipment is packed in original boxes and
packing. It is brand new and unused except to test. Tks es 73!

Yes but do you really NEED all those filters. A lot of people buy them just cause they are available thinking that the radio is incomplete with out them. Whither on not they ever use them is not a consideration. Several radios do not have optional SSB filters. Kenwood's TS-940 and the new Yaesu FT-100 are two that come to mind.

You may not need to buy the filters but what about the cost of the computer that is needed to run some of the ones you mentioned.

That new Icom 756 Pro has caught my eye... what do you think about it?
If they had not put that color display on it I could have resisted......
Do you think many 756 owners will sell to get the PRO version?

Don't forget RadioKit, Ramsey, and HamTronics.

I've built Ramsey kits, from simple to complex, and they seem to be
better than a lot of the old Heathkits for 'tutorial' purposes.
Technically
some are better, some are worse.

Hamtronics are the 'bear bones' of kits. Some good designs, but
you'd better know what you're doing. Their kits are pretty much
a bare PCB. You have to make shields and wind all coils from pure
scratch. Neat kits, but no for beginners.

Ramsey is carried as special order at Radio Shack. HamTronics
you'll have to pick up a mag like QST and look for an ad.

I think the Ramsey web site is www.ramseyelectronics.com or
something like that.

So is it your job to be a cop?

Worried about a TNC? Come on!! Get a life!

And just for the record, I know of two NON-HAMs that have TNCs.
They use them to monitor now, but they bought them just for the
weather fax stuff built in.

Not to mention that there is activity on those small 300MHz remote
control modules (as advertissed in Circuit Cellar) that is done
with TNC type equipment. Right now I know of one company that
is using TNCs to develope a product.

So who is anybody to be so arrogant to declare they they know best for
what a buyer might want them for.

Cop wannabes....

For what it's worth.... I use the DSP filters of my TS-870 a lot.
One handy feature is in zero-beating... I get the CW signal the
loudest in the 50 Hz filter and know I'm zeroed in pretty well. Also,
my QTH is noisy and the DSP filters sure wipe out the noise. One
amazing thing about the DSP filters is that they hardly ring at
all...even at 50 Hz. My 940's 500 Hz filter rang more. They, of
course. cut out QRM real well too.

Yes but you cannot say that all the present no coders would NOT be
hams if there was no no code. There has been a steady stream of ham
before the no code was born and still would be today just maybe not
quite the current volume but still sizable. No code HF will over pack
and kill already crowded ham bands. I have been at it for 30 years now
and code was never a deterant, just hurdle to overcome.

One thing that bothers me is, if you hold on to one of these virtual
rigs, like a Pegasus, for 5, 10 or 15 years, will the operating
systems of future PCs work with the software that comes with these
rigs today? In other words, would Windows 2010 run the Pegasus'
Windows 95/98 software?

Probably so, but it's something to think about...

(I've still got a bunch of old Dr. Morse cartridges I ran on a
Commodore 64.)

Maybe your trip will take you many other places, but for the USA, http://www.airnav.com will tell you everything you could want to know about com frequencies around every commercial airport.

When I was at the plane spotter platform at LHR (on the top of Terminal 2) in June, a number of people were listening to the airport tower. If you get to LHR, go up there and you'll probably find someone who can help you with UK frequerncies. There's a shop up there which sells aviation enthusiat items. Perhaps it's worth the 100+ steps you have to climb. Also the Brit "Short Wave Magazine" has a monthly volumn on aircraft radio.

4772. Selling a "XXXXX" MINT

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-27 00:00:00 UTC
From: alx4443@aol.comet-d42
Message-ID: <19990827111644.24172.00000566@ng-fy1.aol.com>
Source record: 100018

I am sick of seeing the term "mint" to describe used radio gear. Most sellers think that if the item isn't dented & they have the original box, it must therefore be "MINT". I recently went to a hamfest & a guy says to me, "your looking for a 2M mobile? Come over here I have a MINT Radio Shack 242." The radio's correct description should have been USED. It worked & he had the box, but anyone could tell that it had been used. If one were to use the term mint as some radio sellers do in any other hobby, say, the "model train", Comic book" , "coin or stamp" Newsgroups they would be in big trouble. I believe MINT to most common sense people means it could pass off as a Brand New item in a store, under scrutiny. How the heck can an 11 yold "modified" handheld be in "mint" condition, as I see on ebay & these newsgroups all the time??? Anyone else have gotten "burned" by the mint nonsense???

Hi Jacques... it stands for " Exalted Carrier Selectable Sideband" the
term dates back to the 30's... it is basically the same thing as
Synchronous detection, in that a carrier is inserted in the IF passband
to enhance recovery of transmitted audio.This is accomplished by
re-inserting the carrier at or very near to zero beat at the same point
as the original carrier, which is weak due to selective fading, noise,
or plain lack of signal strength. Hope this helps... 73 de Jordan...

Curious, but how does this work in practice? If you insert a local
carrier, I assume it has no information on it. When mixed with the
"real" carrier, coming through the antenna terminals, does it somehow
make the real carrier more intelligible?

Tnx,

Bob

4780. Any reviews on the Yaesu VX-5R?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-27 00:00:00 UTC
From: bes@ihgp136x175.ih.lucent.com
Message-ID: <7q6d10$sva@ssbunews.ih.lucent.com>
Source record: 100026
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Has anyone here written a rewiew of the Yaesu VX-5R HT. I've heard about some of the gripes like it gets hot during extended QSOs (though from what I've heard, I'm not convinced its any worse than any other 5W HT).

I'd be interested to here about:

- The PC interface and software and its ease of use. Is the software a nice, professional like GUI interface that's intuitive? Or, is it awkward and cheazy like the AOR 8000 scanner interface software?

- How about the interface on the unit itself? Is it intuitive and menu driven? Or does one have to remember an endless jumble of key sequences, ie fnc+shift+3 to turn something on or off. I hate it when I don't use something for several months and I have to look in the manual to refresh just to use it again.

- Is the standard antenna adequate for all three bands?

- Will the unit work adequately as a scanner in its advertised receive range, or is this just marketing hype? I've already heard that the unit was pretty useless in picking up AM with the standard antenna, yet that is one of its advertised features.

- Any comments on the barometric pressure and altimiter unit. Is this just a chip that you plug in? How accurate is this?

Thanks for any info.

Rob

4781. Re: ham radio kits

> http://www.tentec.com/Amateur.htm

May I second Bob's comment?

These are particularly good for training purposes, as each circuit is explicitly explained. You can also test things as you build. I recently completed the 1320 low-power shortwave transceiver; you start by building and testing the audio power amp, then the VFO, then the mixer, and so on.

Much more educational than the old Heathkits. (where you would do everything according to the instructions, then hope it worked. (it usually did) If it didn't, you went to the chart to see what they thought you did wrong...)

Do you already have some experience with soldering on circuit boards? If not, I would get some practice at that before attempting *any* kit.

But for the degree they dont give you a masters if you can speak
french at 20 wpm and a BA if you can only speak it in 13 and a AS if
you can only handle 5wpm. and thats the point if you can handle cw at
5wpm, good enough, lets test something else to advance, perhaps even
something useful.

You aren't listening to the CARRIER unless you're listening to CW.

You're listening to SIDEBANDS which convey the modulated information that is broadcast. If you had to have the ORIGINAL CARRIER to get any intelligence out of a signal, you'd be unable to use Single Sideband.

Thus, if your "local" carrier is close (closer the better for those who aren't tone deaf) to the original carrier frequency it will work fine. It does not "...mix with the 'real' carrier..." as you state but substitutes for the original carrier which is nothing but a non-varying single frequency we'd hope signal.

I think first one should understand the full capabilities of DSP on transmit and receive.What about the frequency readout on your rig? Compare the selectivity options which are built into the Pegasus. How many memories on your 757? Auto-notch, etc.... Will your operating habits, location and antennas allow you to fully realize some of the alleged numbers you are concerned with? Ask Ten-Tec about their finals and the ability to work into a high SWR with no foldback or damage. How about service? The Pegasus is a totally different and new approach to rigs as we know them. You made two statements that first caught my eye:Your rig is fifteen years old. Next, Ten-Tec has sold out the early runs of production. I understand your concern on the investment. I would recommend some recent, up to date reading on technological advances in the last fifteen years. Just like computers the difference is night and day. Like going from analog to digital, try not to cast a jaundiced eye on the new breed of gear. My self, I still think a Drake R4-B with the MS-4 speaker had the most pleasant audio to listen to of any HF rig! Sorry , you did not ask that.Good luck in your quest. 73, Dave-KA4CNH
PS: I love my Ten-Tec!

Brian, Get over what?? You are the one stuck with a ATAS-100 that you think is ..... FANTASTIC! You are the one with the problem. I can recomend a good book on mobile antennas if you want. Then you would be able to tell a good antenna from a dummy load.
I used to be fat, dumb, and happy. Then I read Don Johnson's book on mogile antennas. Now I am just fat!

> Is there a web site that lists out all the ATC communication
> frequencies at the various airports around the world?

In the US, various publications show all radio frequencies used in ATC, navigation, and other aviation functions (not counting company frequencies) for both civil and military aircraft. These publications include sectional maps, approach plates for all airports with radios, the airways charts, and a variety of military charts. You can purchase the civil charts and plates at FBOs (fixed-base operators) or from the originators, the US Government and a company called Jeppeson (try www.jeppeson.com, although I'm not sure if this is correct--if it isn't, check avweb.com to see if they have a better one. I believe Jeppeson can also supply similar information for non-US operations. Be prepared to spend a lot of money for a complete set; Jeppeson stays in business by selling this information.

If you know someone who flies, you may be able to beg an out-of-date set from them. The maps and charts are updated on a quarterly or so basis and out-of-date versions cannot be used for flying, which usually turns them into waste paper in the eyes of the aviation world.

> I am getting into
> ham radio and have this little rig that I intend to carry on my
> travels.

Is the frequency range suitable? Civil aviation uses VHF and military aviation uses UHF. The latter is in the 300-megahertz range and the former in the low 100-megahertz range. Isn't ham radio at a different frequency?

The only radio I ever saw being sold 2nd hand as "mint" , that really was mint, was a Yaesu VX-5R that a guy bought 2 weeks before he sold it. It still had the protective peel off plastic coating on the screen!! I have however seen many good but very "used" items being called MINT by their sellers. Heck, you can call your 11 year old dented HT brand new at a hamfest, as long as I can pick it up & look at it, but the overused term " mint" shouldn't be used to sell gear over the net i guess.....

4807. Re: Selling a "XXXXX" MINT

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-27 00:00:00 UTC
From: William Lee <willee@interconnect.net>
Message-ID: <%qEx3.23553$gO1.880167@news2.giganews.com>
Source record: 100053

Mike, someone need to explain economics to you. Radios are worth what a buyer will pay.
no more ... no less. You would not pay more for a radio that it was worth to you and neither would anyone else. If another person feels that 20 year old radio is worth what it sold for new you should not call the seller "dishonest" or call the buyer a "sucker". Are you upset because others are willing to pay more for something that you want to buy for cheap? If I sold you a new radio for 1/10 its new price who would be called "dishonest" then.

William Lee N5WRX

I've seen some of us
> sell radios for 20 dollars less than a new price for a radio that is 4 years
> old. Boy-o-boy figure this. You got to use that radio for 4 years for 20
> bucks just because your a non-smoker and you decideed the radio is "mint",
> "pristine", "rare" and 9.5 on a scale from one to ten. Are you nuts?
> Ok now dish me your lines about how I shouldn't buy it if I think the
> price is too high. Now hear my line.....are you the type that will sell a
> radio for a over inflated price just because you had just found a sucker?
> Man, I guess that makes you a honest person.

Brian, I am not perfect nor are you. My last reply did not refer to my being perfect. It referred to my not being dumb. Read it again real slow and you will see. Most people do become smarter by reading books. But you twisted that into me be being smarter than everyone else. You started throwing rocks at me for disagreeing with you about your "FANTASTIC" (your words not mine) ATAS-100 antenna. Now you twist my replies to suit your mood. Hey... I had an ATAS-100 and did not like it so I got rid of it. I now use a Don Johnson DK3 Screwdriver antenna for mobile operations.

Now I am not so dumb, a little happier, but still fat.

Now.... see what you can twist out of this reply.

FT-100 is BAD!
I got a bad Yaesu FT-100 from Texas Towers.
It doesn't transmit on 70cm FM.
I sent it to Yaesu twice and they still can't fix it
and Texas Towers will not refund my money!
I will never buy a Yaesu again and never buy anything
from Texas Towers again.

Hi mark. It is asusmed that the antenna would be tuned to the operating frequency before evaluating its performance. One of the most common way to tune a mobile antenna is to adjust its size.

The time has come to see my Triton off to another home.
(sniff ... sniff) :,(
I am gonna miss this radio for sure.

This Legendary Triton IV (455) is in excellent condition with
matching speaker/vox power supply and manual.
It has the noise blanker and filter board installed.
Works 100% and no visible wear on front panel.
If you have been waiting for a real nice Triton IV 455.. this is it.

It ain't gonna go cheap. $455 and I pay shipping.

I also have two nice Century 21 CW radios.

Analog $225
Digital $275
I will pay the shipping.

If you're going to Shelby or any other hamfest:

I'm a serious collector of WW-II aircraft radios.
I pay and trade well for rare or unusual
"ARC-5" type Command Set radios and accessories.
Types for which I'm looking include:

Any transmitter, receiver, rack, modulator,
control box etc. marked *BOTH*
"Aircraft Radio Corp." *AND* "SIGNAL CORPS U.S. ARMY"

BC-942 Receiver in unmodified condition.
This receiver, made by Western Electric, looks just like the
common AN/ARC-5 R-28 VHF receiver but has a Signal Corps U.S. Army
nomenclature plate showing BC-942.
Western Electric BC-699 transmitter (looks like a T-23).
AN/ARC-5 R-112 Receiver
AN/ARC-5 R-113 Receiver
AN/ARC-5 T-89 Transmitter
AN/ARC-5 T-90 Transmitter
Any radio, rack, part, dynamotor or accessory marked
for set RAT, RAT-1 or RAV in any condition.
BC-455 with English Lorenz modification for 28-41 MC.
Any AN/ARC-5 unit with "X" appended
to its nomenclature (i.e. AN/ARC-5 R-26X)
Crystal Frequency Meter O-4/ARC-5.
Any unit factory-marked in Cyrillic.

Anything else odd or unusual in this line is
always of interest.

Source record: 99890

I have been reading the thread here.

Reason is I am looking for opinions on the Atlas 100. Considering one myself.

I agree with both opinions, sort of. It has been my experience that a vehicle and the mounting location is most likely the biggest determining factor. I have had a lot of experience mounting antennas on ambulances for the 46-50 MHz band over the last 10 years. As the vehicle model design changed, let alone the vehicle conversion to ambulance changes, we have found that brands we considered poor performers worked better on some vehicle configurations then the so called good antennas.

In the ambulance field you are dealing with basically a ford van that has been converted to either a basic ambulance or a super box. The amount of metal to fiberglass ratio varies signifcantly between these two types. What should be generally an ideal mounting location can give poor results because of the vehicle makeup, content.

Further personal experience experimenting with a 10 meter antenna on my own vehicles, back when 10 meters was hot, has shown some unpredicted results. I pieced together a hustler 10 meter coil, a short mast, and a trunk lip mount that I was told would never work. For size reasons, parking garages etc., I had to do this. Well playing with location I found that the passenger side of the vehicle of the trunk, close to the rear was the best location. I figured that the front center was best, but I guess the roof metal coupled with the short mast was killing me. Further back and the better it worked. Why passenger? I still have no feel for that, except that the gas fill was on driver side, maybe that had something to do with it. Now trying my fathers 10 meter hustler configuration, which was the factory reccommend version, it worked best dead center just behind the rear window, where I thought mine should be orignally placed. When testing I found my setup to be equal if not better. I made many DX contacts with only 25 watts, including Japan.

Having an antenna on one side of a vehicle versus another or just the make and type of vehicle may make a big difference. You guys might be both right, have fun.

Just My 2 Cents
Jim C.

I have a ICOM 740 HF mobile rig that is in good condition. It has all the amateur bands. puts out 100 watts. I would like to trade it for a 2 meter all mode base rig or I will take 350 bucks for the rig. The rig comes with mic and owners manual. It is a great rig for mobile operation. Its a 7 on the scale of 1 to 10. I ran the rig mobile but I

have upgraded to a continuos coverage rig.

True. But ham radios often have a far wider receiving frequency range.
That's enough to receive those ATCs.

Cheers,

Hi-
I have a nice Drake L-4B Linear Amplifier for sale.
It is a 9 or 9.5 on a scale of 1-10
Includes Tubes, Chimneys, Power Supply, and Operation Book.
Unit covers 80-10 meters and does 1400 watts PEP out on 75.
Would prefer to sell locally (Atlanta) or can bring it to Shelby.
I will ship it if I have to, but it would go in 3 boxes (PS, Amp,
Tubes/Chimneys).
Looking for $750
Anyone interested?
You can see pictures of it it here. Please be patient, the pics are about
200k and high resolution.

Hi mark. It is asusmed that the antenna would be tuned to the
operating
frequency before evaluating its performance. One of the most common
way to
tune a mobile antenna is to adjust its size.

I asked the same questions. The SGC is an antenna coupler,
not a tuner. It is designed to work at the antenna end of the
feed line. A tuner works at the transmitter end.

From what I have seen the SGC works better than any other
form of mobile antenna arrangement. It also works very well
with limited space QTH antennas.

The SGC 231 is set up to take instructions from the ICOM 706.

>

Greg, In what way do you feel the SGC-230 better that the Screwdriver type antenna?

I have them both and have found that while the SGC-230 with a 8" whip will tune up faster it will not radiate as well as the Screwdriver type antenna or a good as a well designed center loaded vertical. The difference is nothing tremendous but it is a better performer. The SGC-230 and 8" whip looks better and is easier to setup and would work well with a shorter whip as well.

I have been mobiling for many years now and am still looking for that perfect antenna.
My Specks for a perfect antenna are:

1. less than 1 foot tall.
2. 9 dbi or better gain
3. 90% or better efficient radiation on all bands from DC to Daylight.
4. Cost less than $25 including the coax and mount.

What are the chances in this lifetime?

William N5WRX

> N0HCV

Amen to that.

Gentlemen (and Ladies);

The knowledge, or lack thereof, or CW does not make one either a good operator or a Lid. This distinction arises from the sum of one's technical ability (to construct and maintain a clean, effecient station in good workign order), knowledge of good operating practices, and personal committment to uphold the highest traditions and standards of the Radio Amateur.

I agree that there are MANY examples of poor operators of all license classes, on all bands, almost any time. Is this a symptom of the no-code license ? I doubt there is any logical argument which could prove it. Is this a symptom of the general decline of manners and personal responsibility for our own conduct ? Almost certainly.

I have been an amateur for almost 8 years now (I know, a virtial puppy :-)), and I entered the hobby as a no-code technician. I also entered the hobby as an individual with extensive emergency preparedness experience, and as an individual who utilizes radio communications for life/safety traffic on an almost daily basis. Does this make me any "less" of a ham ? I suspect many people out there would say yes. I also submit that this is as much a reflection on them as it is upon me.

Honestly, my interests in ham radio lie in the areas of weak-signal operations on 50 Mhz and above, and my current licence privledges suit me just fine. Will I someday yearn to operate HF ? Maybe, in which case I will learn the code (I am working on it as time permits.....). Will learning the code, in and of itself make me a better / worse / unchanged operator ? Probably not. Will continuing to gain experience, continuing to experiment, and continuing to strive to maintain high standards for my operations make me a better operator next month than I am today ? Unequivocally YES !

I have been fortunate to meet some extrordinary folks via this hobby, and many of them offered me valuable advise and guidance because they were able to look beyond the narrow issue of my licence class and see that I was genuinely interested in the art of radio communication.

So whatever your feeling about code vs. no-code, 5wpm vs. 13/20/90 wpm, etc., please look to your self and vow to do the following :

1. Respect each and every amateur for their interest in hobby.

2. Try to spend at least as much time helping out a new ham as you do showering the 'net with invective on either side of the code issue

and

3. Remember that each of us has a specific interest in the hobby, and that our interests may differ. There's room for all, if we try.

Amateur Radio will NEVER become Citizen's Band if, and only if, we look to the traditions of our hobby, embrace them, and PASS THEM ON. Public service, advancing the art of communication, fellowship, and goodwill are what seperate us from CB, or internet chat rooms, or newsgroups.

That said, I am gonna go see if 6 is open......

73
Matt

Source record: 99930

A good review of basic antenna theory may shed some light on this subject. Forget all the nomenclature of some of these devices. With the SGC "unit" you are still base loading an antenna which other than 10 meters is asking a lot.Look inside that unit and consider the size of the inductors as compared to a screwdriver or bug catcher! Don Johnson has a very good book on mobile antenna INSTALLATIONS. Also, any ARRL antenna book will be of great help. There is a lot to consider with a physically short antenna tied to a moving ground plane. Just for one, the best place to load a short whip is between center and 2/3 up the whip with BASE loading being the worst! Yes, this unit will load an 8 FT whip and show your rig a nice SWR, as will a dummy load and on 40&75 meters they will both radiate about the same! I believe on the lower bands you will be very disappointed with the performance. A little reading and knowledge gathering may save yuh some bucks! There are conditions where the SGC will work well, loading a short antenna is not one. Good luck es 73, Dave-KA4CNH

Well I actually read all of the posts to this baited statement (which
was posted on multiple NG's)and for the most part was thoroughly
disappointed. I mean, what ever happened to sticks and stones?
Whether some like the code/no code or not, we are still ALL Hams. We
will be relying on each other in the event of crisis'.

As a child, I used to sit around and listen in when my dad would sign
in on the weekly nets and everyone accepted each other, a sort of
brotherhood. But I see that is now starting to not be the case.

There is no point to this bickering. Lets be good at our hobby and
try to further Amateur Radio.

The really sad thing is that this guy had a nice web site with the FT-100 Mod on it. This guy was really into the radio and created a lot of excitement. He also had a banner to get to TEXAS TOWERS. He has since go rid of the FT-100 mod and the Texas Towers Banner but has kept the rest of his site. I find it sad to see how he was treated. The FT-100 is a lemon and if you read the ONELIST ARCHIEVEs all you will see are guys compairing the turnaround time for repairs of the FT-100 and check serial # they have and many have sent theirs back for 3 times. Yaesu should disband the model adn offer a 100% refund on the product, and shoot the Enginners and their families who designed it. The QST review was good but the radios have a high failure rate.

Hello..

I am presently working on a project and am in serious need of some recommendations. I am putting together a small 33cm ATV Xmtr but am having problems finding just the right transmitter. My plan is to feed 10-20 mW into a Down East 3310 PA and just run it like that. Problem is, I can't find a good transmitter to fit the bill. If you know of something that matches as many of these criteria as possible, PLEASE email me...

Synthesized
Only 10-20 mW or power controlled somehow
Small Size
FM Video
Reliable for extended operation
Clean output

All I've been able to find was some "spy transmitters" which are way too much money because they aren't designed for the amateur service. Help, please!

4894. Heathkit hw-16 and hg-10b for sale or trade.

Hello,

I have a heathkit hw-16 and Hg-10b vfo for sale or trade.
Both units are in good shape and work well. I have made several
contacts on the set. The hw-16 is a 7 out of 10 has some age on the
case. The face of it looks good all knobs and sockets,switches, meters
are working and look good. I would like to get $100+shipping out of the
set or trade for a 10 meter rig with cw. TNX for looking.

It's Exalted Carrier [something something].

This may get detailed.

We are talking about reception of AM signals with a carrier; there's
nothing to synchronize to with an SSB signal.

Exalt means in effect to boost.

If you're listening to an AM signal, as it fades often the carrier and
sidebands will not stay at the same power ratio to each other. If the
carrier is not strong enough compared to the sidebands, the demodulated
signal will be distorted.

Apparently, the earliest scheme of Exalted Carrier (ie boosted carrier)
was to use a Q-multiplier, which was a common item in days gone by, either
built in to a receiver or as an accessory. In its Peak function, it's
like adding a narrow filter to the receiver, though it has lousy skirt
selectivity. If you adjusted it right, you would peak the incoming
carrier while attenuating somewhat the sidebands, which has the result of
increasing the carrier level in respect to the sidebands, which is what
you want, and then the distortion disappears.

Another scheme I've seen, in a very fancy receiver in QST, there were two
separate but parallel IF strips. One was wide enough for AM, while the
other was narrow for CW. But what made this design unique was that at the
output of the AM strip was a product detector (as seen in SSB receivers).
Where the BFO would go for SSB, the output of the narrow IF strip was fed.
The two IF strips would beat against each other, and the result would be
audio.

The narrow strip stripped off the sidebands, and just amplified the
carrier, which was then of a suitable level to beat against the AM
signals.

The point to all this over simply using a BFO is that the amplified (ie
Exalted) carrier was exactly the same frequency as the incoming signals
carrier, so there were now oddities from a mis0tuned BFO.

The above is definitely Exalted Carrier reception.

However, upon looking at a reference or two, some may put another meaning on ECSS, in which case the acronym could stand for Exalted Carrier Sideband System. However, the following actually removes the incoming carrier so I don't think the reference I found is correct.

Once sideband receivers (ie bandwidth of a single sideband, a product detector and a BFO) became common, a common scheme to receive AM was to tune in the AM signal so the carrier was well attenuated. In effect, the receiver's filter turns the AM signal into a single sideband signal by stripping off the extra sideband and the carrier. Then you just beat it down to audio with the BFO. Since the carrier is well attenuated, there is no problem with a BFO that might not be exactly on frequency.

The same scheme was used to tune in DSBsc (double sideband suppressed carrier). I'm not sure how popular that mode ever was, but it was simpler to build that kind of transmitter than a sideband rig, yet it was more efficient than an AM rig. Since most people didn't want to bother with synchronous detectors, necessary for DSB in order for the injected carrier to be right between the two sidebands (otherwise the two sidebands would beat against each other in an unpleasing way), it was common to slice off the extra sideband and treat it as an SSB signal at the receiver.

But if you are injecting from a BFO, it's not a synchronous detector.

The point of synchronous detection is to in effect lock the BFO in the receiver to the carrier of the incoming signal, so it will be precisely where it should be.

Once the BFO is locked to the incoming signal, operation is identical to SSB reception on an SSB receiver, in that the BFO beats the sideband(s) down to audio in a product detector.

The simplest synchronous detector is a phase-locked loop, with the VCO locking to the incoming carrier, and a prodcut detector that is fed from the VCO.

That does nothing with the extra sideband, and does nothing to take advantage of the extra sideband.

More complicated, there are synchronous detectors that offer selectable sideband. The scheme for locking to the incoming signal is slightly different, and the selectable sideband feature comes from audio phasing, which was common in the early days of SSB, and has been seen recently in such things as the R2 receiver in QST, and a lot of work with DSP.

Not all synchronous detectors are of the selectable sideband type.

Another scheme that some might consider quasi-synchronous, and some might consider exalted, is to split the IF signal into two paths. One side goes to the product detector. The other is feeds a limiter, that strips off the amplitude variations of the signal. The output of the limiter feeds the other input to the product detector, in effect being a stronger version of the incoming carrier. The word is that this is better than an

traditional diode detector, but not as good as a "synchronous detector" as outlined above.

I think I've covered everything.

Edit e-mail address to reply: "sci at pobox dot com"

Here's what I have: (See what I want listed below)

FS/TRADE:

-Ham Radio, mobile Dual Band. Icom IC-2350H. TX 144-148 at 50/10/5 watt. (Rx 118-174) & TX/Rx 440-450 at 35/10/5 watt. Built in cooling fan. Cosmetically and functionally, perfect. Owner's manual and mic included. 50 memory channels and scan edge memory channels. Scratchpad function. Priority watch function. Programmable function button on mic. Pager function. Time-out timer, auto power off, mono band operation. (Picture on internet) $295.

-Ham Radio, Yaesu FT-50R, in original box with owners manual and warranty (paid $339), with FTT-12 Keypad upgrade (paid $62), 2 batteries (7.2v 1200mAh, 6v 600mAh) (paid $40 for extra battery), wall adapter/charger, owners manual, over the ear-mic w PTT (paid $40) , ADMS Windows Software (paid $41). In great condition, never dropped or dirty/wet. Will trade toward Desktop/Base dual band. http://www.yaesu.com/ft50.html or http://www.yaesu.com/50spec.html . (I paid over $566.89 for everything including tax.) All yours for $300.

-Ham Radio, Alinco DJ-C5, 50 memory channels, CTCSS tone encoder / decoder standard, Volume/Squelch control, Keylock, Auto power OFF with Morse Code alert, Mic/Earphone jack, TX lamp, Pivoted membrane keys
Free offset, Reverse monitor, Scan function with skip setting, Multiple European tone bursts, Battery save mode, Channel display mode, AM aircraft receive with expanded, VHF wide band reception.
http://www.alinco.com/usa.html for picture and specifications. FS or Trade toward desktop/base dual band.

-Universal Battery Charger, Maha MH-C777. Paid $54.19. Yours for $30.

-Police Scanner, Desktop & Mobile, AOR Communications Receiver (AR2002) Continuous coverage 25MHz - 550MHz and 800 - 1300 MHz with 20 channel memories. That means NO blocked frequencies in those two zones. Receive modes are NFM, WFM, and AM. Accurate receiving frequency by PLL synthesizer circuit. Multi-functional LCD display for frequency, scan, mode, search, time. Easy and efficient keyboard operation for frequency selection and various modes. Has computer interface port, headphone and external speaker jacks. (Picture on internet) $125

-Police Scanner, Desktop. Radio Shack Pro-2032 with 200 channels in 10 banks, hyper scan, etc. Great and reliable unit. $100

-Power Supply. (Astron RS-20A). 20 amps. Perfect for HAM applications.
New in box. Paid $130, Yours for $95

WANTED:
1. Grandfather Clock

2. Optoelectronics Scout

3. WinRadio or other PC based Ham radio or scanner.

4. J & M Headset for my Goldwing.

5. Motorcycle trailer to tow behind motorcycle.

6. Motorcycle trailer to tow motorcycle on.

7. Mobile dual band (2m/440) good quality ham radio no older than 3 yrs
(like Alinco 610, Kenwood TMV 7A, Icom 2700)

8. Base dual band (2m/440) good quality ham radio no older than 3 yrs (like
Kenwood TS790, Yaesu 736, Icom IC 820 or 821).

9. Sea Kayak

10. 168-pin DIMM to support SDRAM/EDO DRAM/Page Mode DRAM up to 128MB.

11. Palm Pilot V

12. Rolex, two tone.

I want to trade for a dual band (2m/440) good quality ham radio base/desktop no older than 3 yrs (like Kenwood TS790, Yaesu 736, Icom IC 820 or 821.

Here's what I have to trade:

JEWELRY
- Watch, Omega Seamaster. Stainless with black face. Date and day. Works perfectly. New battery. (ask for picture by e-mail) $700

-Watch, G-Shock "Protection." Clear and gray watch. Used. Works perfectly. In good condition. This is NOT the standard G-Shock. This has a custom body. (ask for picture by e-mail) $75.

-Watch, Seiko Analogue Quartz 7T-32. Alarm, chronograph & timer. Three mini-dials on the main face with date. Darker-green metallic face, gold bezel. New in box with warranty & owners manual. Retails $475 + tax. (ask for picture by e-mail) Yours for $225

-Watch, Men's Citizen Dress Watch with Mother of Pearl Face, black leather band, black body, ultra thin. Beautiful watch. New for $398, yours for $70.

-Watch, Men's Storm watch. Blue face. All stainless steel bracelet. $169. (Picture on Internet) Yours for $50.

-Ring, USMC Diamond/Gold/Onyx men's, 10k & black onyx with 1/3 k. diamond, Jostens, lifetime warranty & re-sizing. (New $950) - (picture on net) Yours for $400.

HAM RADIO & POLICE SCANNERS
-Ham Radio, mobile Dual Band. Icom IC-2350H. TX 144-148 at 50/10/5 watt. (Rx 118-174) & TX/Rx 440-450 at 35/10/5 watt. Built in cooling fan. Cosmetically and functionally, perfect. Owner's manual and mic included. 50 memory channels and scan edge memory channels. Scratchpad function. Priority watch function. Programmable function button on mic. Pager function. Time-out timer, auto power off, mono band operation. (Picture on internet) $295.

-Ham Radio, Yaesu FT-50R, in original box with owners manual and warranty (paid $339), with FTT-12 Keypad upgrade (paid $62), 2 batteries (FNB 49 & FNB 41 paid $60 for extra battery), wall adapter/charger, owners manual, over the ear-mic w PTT (paid $40) , ADMS Windows Software (paid $41). In great condition, never dropped or dirty/wet. Will trade toward Desktop/Base dual band. http://www.yaesu.com/ft50.html or http://www.yaesu.com/50spec.html . (I paid over $575 for everything

including tax.) All yours for $300.

-Ham Radio, Alinco DJ-C5, 50 memory channels, CTCSS tone encoder / decoder standard, Volume/Squelch control, Keylock, Auto power OFF with Morse Code alert, Mic/Earphone jack, TX lamp, Pivoted membrane keys
Free offset, Reverse monitor, Scan function with skip setting, Multiple European tone bursts, Battery save mode, Channel display mode, AM aircraft receive with expanded, VHF wide band reception.
http://www.alinco.com/usa.html for picture and specifications. FS or Trade toward desktop/base dual band.

-VOX Headset, Yaesu VC-23. Paid $64, yours for $30.

-Universal Battery Charger, Maha MH-C777. Paid $54.19. Yours for $30.

-Police Scanner, Desktop & Mobile, AOR Communications Receiver (AR2002) Continuous coverage 25MHz - 550MHz and 800 - 1300 MHz with 20 channel memories. That means NO blocked frequencies in those two zones. Receive modes are NFM, WFM, and AM. Accurate receiving frequency by PLL synthesizer circuit. Multi-functional LCD display for frequency, scan, mode, search, time. Easy and efficient keyboard operation for frequency selection and various modes. Has computer interface port, headphone and external speaker jacks. (Picture on internet) $125

-Police Scanner, Desktop. Radio Shack Pro-2032 with 200 channels in 10 banks, hyper scan, etc. Great and reliable unit. $100

-Power Supply. (Astron RS-20A). 20 amps. Perfect for HAM applications. New in box. Paid $130, Yours for $95

ELECTRONIC GADGETS
-Digital Video Camera. (JVC GR-DV3) takes digital video as well as digital stills to download to your computer. 100x zoom, Digital Cyber Cam, uses Mini DV NTSC, full range auto-focus. With video cable, brand new 60 minute tape, and brand new lithium battery (purchased 8/99), battery charger and wall adapter (so you don't have to use the battery). Very well kept, functionally and cosmetically in perfect condition. Never dropped or exposed to dirt/moisture. $625 for all.

-Wireless Headphones, 900mHz RCA (WHP150). Range 125 "Invisibly connect with virtually any TV, VCR or Stereo system through walls, floors and outdoors." Transmitter, headphone receiver, 1/4" stereo plug adapter, 18v DC adapter, two AA NiCad rechargeable batteries included all in original box with owners manual. $85

-Mini-Disk Recorder, Sony (MZ-R55) (size is 3" x 3.25" x .75") includes 5 unopened blank mini-disks, headphones, rechargeable NiMH battery, detachable extra battery pack, remote control, carry case and owner's manual. All in cosmetic and functional new condition. Currently at Good Guys (as of 19 July 99) for $379 as their best model. Yours for $225

-Wireless microphone & receiver (Video Concepts WCM100R with 2 channels). In carry case for $40.

-Muzak Background Sound Music System. Listen to music in the background that fades from one song to next. Comes with 20 music cartridges (roughly 300 minutes per cartridge x 20 cartridges = 6000 minutes or 100 hours!). Categories of cartridge include: light symphony, country classics, Motown, baroque concerti, stardust instrumentals, mixed tempo "tender memories", contemporary piano, romantic classical, upbeat "American Graffiti", upbeat "classical chamber", upbeat "southern rock", upbeat "classical rock", moderate "mainstream jazz", moderate "contemporary background", moderate "contemporary piano", moderate "contemporary jazz", and upbeat "hits of 1988". Works perfectly, cartridges in great condition. Complete bundle for $75

-Telephone, 2 line, large LCD screen, caller ID, speakerphone, Northern Telecom (350), redial, upgradeable, printer output, directory, line in use indicator, voicemail compatible. Sells for $400 at GTE Phone Mart. The best phone they sell. $125.

COMPUTER HARDWARE
-Digital Camera, Olympus D-320L with PC cable, owners manual, software, wall adapter. Perfect functional and cosmetic coindition. With standard 2MB smart media card and upgrade 8 mb smart media card. $300

-Mitsubishi Color Video Copy Processor (Model CP 100U). Print color pictures from video. $75.

-PCMCIA 20 Meg Intel flask memory card. (I have two of these) $40 each

-Digital Camera Memory, 2MB 3.3V Smart Media (SSFDC) (Solid State Floppy Disk Card) $10

-Label Printer, (Costar Label Writer II+) all cables and software, half role of labels. ($149 + tax retail) yours for $70.

MISC
-Juicer, Acme Juicer (new for $299) with orange juicer attachments (new for $50) and 400 filters ($10). All yours for $125

-Clock, Seiko brass clock with world time, second hand has airplane on tip. Beautiful quality and condition. (Picture on Internet) $100.

-Office chair. Swivel with adjustable height. (Picture on Internet) $30.

SOFTWARE
-Windows 95. Certificate of ownership. On CD. $28
-MS Visual Studio 6.0 Professional unopened. Visual basic, Visual C++, Visual Fox Pro, Visual InterDev, Visual J++. $300.
-MS Project 98 on CD, new in box, unopened. $65
-MS Publisher 97. Disk only. $20
-MS Encarta 97 World Atlas on CD for Win 95. $15
-MS Encarta 97 on CD for Win 95. $15
-MS Trip AutoMap Planner 97. $15
-MS Bookshelf 96/97 for Win 95 on CD. $15
-MS Works 97 (4.5) for Win 95/NT4 on CD. $20
-MS Works 96 for Win 95 on CD. $15

-MS Urban Assault for Win 98 OR Win 95 only on one CD. $20
-Norton System Works 2.0 (includes Norton Utilities 4, Clean Sweep, Norton AntiVirus, Norton Crashguard, Norton Web Services. $50

I have a strong feeling that we're not getting the whole story here.
There is usually a reason for a company to refuse a refund or exchange.
The most common reason is that the owner has messed around inside the
the radio (TX modifications, etc.). Perhaps that is the case here.

However, assuming that the radio is unmodified, package up the radio
and send it directly to the president of Yaesu USA. Politely explain
the problem and request a replacement or refund. The odds are good that
a replacement will arrive shortly thereafter.

By the way, note the word "politely" in the previous paragraph. You
will not get positive results with nasty comments or threats.

Don't know about the mast in question, but I use a twenty-five foot aluminum window washing handle for a portable mast. I made a couple of guy wire rings out of a scape piece of aluminum and hose clamps. The whole thing is extremely light and will normally hold a smaller beam/rotor with no problems.

I am closing the station at my summer home. This is my Ameritron AL-1500 HF anplifier with 8877 final (legal-limit+++ with 65-75 watts drive) and automatic fault protection. The amp was purchased new from AES Feb. 1998, has been used less than 100 hours (I visit my summer home less than 6 weeks a year) in casual operating (no contesting or data modes), and is cosmetically and electronically in perfect, as-new condition (the chassis isn't even dusty). Will ship to buyer first week in October when I close the station. Comes with original manual and factory packing. Cost new $2,570. Will sell for $1,850 + shipping firm, no trades. Tks es 73! I assume that Remarq and Supernews are the same service?
http://www.remarg.com and http://www.supernews.com

How do you rate their news viewer?

: >I am not satisfied with my news reader. Is there a better way?
: >
: >Can I use Deja.com like I would with AOL? That is news.deja.com
: >or something like that?
:
: The only problem with Deja News is it operates through your web
: browser, and it is very slow. In addition, its ability to handle
: messages and message threads is really crude. Use Deja News only as a
: last resort.
: >
: >And how does one cancel a message that one has sent?
:
: Once it has left your computer, I don't know of any way to cancel or
: modify a message. It's out there!
:
: > Or modify
: >who might receive it? I am from the old school and used UNIX news
: >readers. The stuff with Netscape and Outlook leave me confused.
: >
: >
: >
:
: I agree, the newsreaders built into the web browsers are not all that
: great.
:
: I use Agent. An excellent reader. $30. It also comes in a freeware
: version, Free Agent. To download either version go to the web site for
: Forte Inc. software:
:
: http://www.forteinc.com
:
: If you'd like to see all the newsreaders in one place, and see how
: they are rated, you can go to the big shareware site:
:
: http://tucows.alpha1.net/
:
: And once there, look under "Network Tools."
:
: Good luck!

:
: Bob
: n5ahy

That's true, BUT, if it has already been sent to other servers, or
someone has replied to your message, it's still out there. If you
don't want the world to see, don't post.

Here's a challenge for your filtering programs.
Let's find out who's the "champion" at weak signals.

I've posted a .wav file at:

http://www.arc5.com/yesraw.wav

Buried in this noisy recording is the word "yes,"
whispered three times. There are also other voices
buried in the noise.

Just for fun, see how much you can pull out of
it and let us know what you find.

I am closing the station at my summer home. This is my MFJ-986
Differential-T legal-limit antenna tuner. The tuner was a standby at
the summer QTH for use with longwire emergency antennas. It is
one-owner/nonsmoker, excellent condition, will tune anything, and works
perfectly (no arcing ever). Will ship to buyer first week in October
when I close the station. Comes with original manual. Cost new $300.
Will sell for $155 + shipping firm, no trades. Tks es 73! Jan N0JR

I haven't tried those sites, but I would guess they work about the
same as Deja News -- that is, they're using the World Wide Web as an
interface for news groups. If you go to a separate news reader, such
as Free Agent, and you work it off your ISP's news server, you'll have
a more direct connection, and things should move a little more
swiftly.

Set up Free Agent. And put the name of your ISP's news server in the
User Profile, under your Options menu, and see how that goes. You
won't have to use your web browser at all.

I am closing the station at my summer home. This is my excellent,
little-used TS-440SAT. It was thoroughly checked and aligned by
Kenwood-authorized service in Spring 1999 and has been used less than
10 hours since, only for casual operating (no contesting or data
modes). It is cosmetically and electronically excellent in all
respects. In addition to the standard accessories - Kenwood hand mic,
manual, and power supply cable - it has installed (by factory-authorized
service)--

> IC-10 Computer Control Kit
> YK-88SN 1.8 khz narrow SSB filter
> YK-88C 500 hz narrow CW filter
> International Radio "Voice Squeezer" True RF Speech Processor
(not
the junk audio ompressor that was stock, which it
replaces; switches
on and off with front-panel "Proc" button; includes doc)
> International Radio "Moni-Module" SSB Audio Monitor (for proper

setting of the Speech Processor; switches on and off with
front panel
"Voice" button; includes doc)

I will ship to buyer first week in October when I close the station.
Will sell for $595 + shipping firm, no trades. Tks es 73! Jan N0JR

I went to the Ten TEC Website and downloaded the Pegasus Software (FREE) and NONFUNCTIONAL. I was impressed. The specs are Decent for the price. If you are in the Market for a HF radio under $1300 I would suggest waiting till QST does a review. I don't think the Ten Tec was meant to compete with the Kachina or even the Ten Tec Omni so I think the receiver is Ok but not stellar. I felt that you would't need the optional Keypad tuning knob but for $139 it is fairly priced if you do want it.

Bill,

For the money a good receiver, "hears" anything my big receivers can and sort of easy to use. The menu setup for the memories is rather hard to use. The "duck" antenna may well be chucked in the trash! I use a MFJ two meter metal antenna, great reception! LSB is a bit off on mine but USB right on! Battery life is short but not bad. Spectrum display is not all that great, the AOR 8000 is much better! All in all a good value for the money.... I got mine used for $185

4957. FS: Drake TR-7 HF Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-29 00:00:00 UTC
From: Bob <xyz_p15218@flash.net>
Message-ID: <01bef274$421a4aa0$5a09d7d8@p15218>
Source record: 99836
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Drake TR-7 transceiver, PS-7 power supply, MS-7 speaker, FA-7 cooling fan, Drake desk microphone (7077?), AUX-7 board, two TR-7 owner's manuals, one TR-7 service manual in Drake binder (not copies). I am posting this for another ham who is not sure of other options in the radio but it appears to have a wide filter for AM in addition to the SSB filter but no CW filter, no noise blanker (the "NB" button does nothing). Condition: the radio receives, and transmits ok and appears to transmit on any receive frequency. There are scratches on the cabinets and the aluminum bright work on the top front of the TR-7 and PS-7. The front panels look good. He is asking $600 for the lot and it will NOT be separated. Shipping is not an option...come buy and pickup in the Detroit Mich area. Operation can be demonstrated.

Hi,
Did you find software for you PK232? I have the original software and
could probably get it to you. Do you not have any software?

> form of mobile antenna arrangement.

Probably the best "form of mobile antenna arrangement" on
75m is a feedpoint impedance of 11-12 ohms. Given the choice
of a well-designed 4:1 Unun, a single hi-Q cap, a single hi-
Q coil, or the SGC, the SGC will come in last place.

I knew the SGC-230 was good at tuning up whips, but an eight inch whip? :-)

> The difference is nothing tremendous but it is a better performer.

A 12dB difference was measured at the last CA 75 meter shootout.

I have both a screwdriver, and an SGC230 - the screwdriver is considerably better with the standard whip arrangement as normally used in mobile operation, while the SGC 230 into a decent random end-fed wire at a campground from our RV is VASTLY superior to the screwdriver... The SGC AIN'T a mobile setup worth serious consideration!

Gee Bobby..who's post did you read (or not read). We all have check books..nothing wrong with that. But there is a big difference in your feeble attempt to understand my post as code being "the value" in ham radio and it "giving value" which is what I said. If you dont understand that hard work gives anything more value to a person..then I'd say maybe you might try it sometime. See ya on HF... or will I..???

>frequency?
.....

Ham radio frequencies run the gamut from medium wave (1.6 Mhz) all the way through HF, VHF, microwave, etc. The amateur radio 2 meter band is (at least in this hemisphere...it shifts slightly depending upon your ITU region) is 144 - 148 Mhz. This band is used mostly for FM communicatons, but there is also AM, SSB, and morse code (CW), etc. Many better radios can transmit in these various modes and can receive a far broader range of frequencies than they can transmit in. Also, it is easy to modify certain radios for wider coverage. (I did just such a thing with a dual band (2m & 70cm) hand held that I own so that I could use it to operate on the 70cm (440 Mhz) amateur satellite frequencies; some of the low earth orbiters run analog FM and it is a real kick to operate through a satellite using a hand held!!
Craig (KB8FGC...licensed as an Advanced Class ham)

I am not satisfied with my news reader. Is there a better way?

Can I use Deja.com like I would with AOL? That is news.deja.com
or something like that?

And how does one cancel a message that one has sent? Or modify
who might receive it? I am from the old school and used UNIX news
readers. The stuff with Netscape and Outlook leave me confused.

I'm not an expert but I am happy with Forte Agent........you can
download the freeware version (FreeAgent) and try it if you want.
But I think posting to Usenet is like posting a letter......once it's
in the system you have no further rights to it.
Have to agree on the Netscape and Outlook readers.
I sometimes use dejanews for the odd group my service doesnt
supply......but it is web-based and loads accordingly. I could be
wrong but I don't think it has a provision to keep your files.
BTW.....Agent/Freeagent is a pretty good email client as well.
Hope this helps.

Got an old FTDX401 from a friend.The rx is fb but the tx is not.Somebody has tampered with
the pa- compartment but i finally got drive to the pa tubes(6KD6)and i replaced the tubes
with new ones,as there was little current left in the old tubes.The problem is that i can't get any
(or little)respond from the "plate"control as i try to resonant the pa output.It looks as sombody
have experimented with the outputcoil bandtappings and i just wondered if anybody out there
could tell me the tappings on the pa output coil on this rig.

David, T have wondered why the name did not apear on the radio somewhere.
Now I know" the rest of thr story". I bet that there are enough stories
about Ten Tec that a book could be written about them.

I am in no hurry to sell my Triton IV.
Its a good radio that will hold its value.
The price is set to see if anyone wants to buy it more than I want to keep
it.

I need help locating a computer program. The program may have originally been on one of the early 90's Buckmaster CD's. Some of you may be interested in the program and hoping someone knows of the program. I have lost track of it and would like to find it again. The program had several functions, but the one I used and liked did the following: Start the program, tune your receiver to a signal or beacon, rotate beam antenna from stop to stop (360 deg), At the end of the rotation the program would display on screen a picture of the antenna receive pattern. As I find the receive pattern is very close to the transmit pattern in most cases, the program was very useful. The only connection needed was to connect receive audio to the computer soundcard. I have no idea of the program name or who wrote it. Sure hope one of you knows. Please drop me a note if you can help. Thanks, Bill, KG8AW

The only problem with Deja News is it operates through your web
browser, and it is very slow. In addition, its ability to handle
messages and message threads is really crude. Use Deja News only as a
last resort.
>
>And how does one cancel a message that one has sent?

Once it has left your computer, I don't know of any way to cancel or
modify a message. It's out there!

> Or modify
>who might receive it? I am from the old school and used UNIX news
>readers. The stuff with Netscape and Outlook leave me confused.
>

I agree, the newsreaders built into the web browsers are not all that
great.

I use Agent. An excellent reader. $30. It also comes in a freeware
version, Free Agent. To download either version go to the web site for
Forte Inc. software:

http://www.forteinc.com

If you'd like to see all the newsreaders in one place, and see how
they are rated, you can go to the big shareware site:

http://tucows.alpha1.net/

And once there, look under "Network Tools."

Good luck!

I have one Icom IC-R100 Communications Receiver forsale. This is a Scanner plus a Shortwave Radio. Its in good condition and had been installed in the dash of a Toyota 4-Runner. Owned by non-smoker.

Wideband frequency coverage 0.5 - 1800 MHz continously with FM, AM and Wide FM modes.
Multiple scan functions including auto memory write scan.
24-hour clock system with muliple timer functions.
A variety of tuning steps corresponding to any operating band. 1k, 5k, 8k, 9k, 10k, 12.5k, 20k, 25k.
800 MHz band NOT Blocked.

Comes with: Mounting bracket, CP-11 (optional) 12volt cigarette lighter cable with noise filter plug, original operator manual.

Asking $600.00 or B.O.
Dan

I have a Kenwood PS-430 power supply whose case is in very rough shape. Kenwood says that the case components (top, bottom, and front plastic bezel) are all discontinued. Does anyone here know of a source for these components, or have a "dead" one of these supplies with case components in very good condition. I would love to "restore" this supply so that it will match the rest of my Kenwood station.

Thanks and 73,

Alan

5006. FT-100 and screwdriver antenna?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-30 00:00:00 UTC
From: n6kb@fix.net
Message-ID: <qaly3.16$bo6.3212@news.callamer.com>
Source record: 99701

Has anyone interfaced a Yaesu FT-100 to a "screwdriver" antenna, so that it auto tunes or memory tunes like the Yaesu ATAS antenna does? I am sceptical about the efficiency of the Yaesu antenna particularly on the lower bands (I guess it's only supposed to go down to 7 MHz anyway) and think it's too expensive.

5007. zero beating a TS50

Newsgroup: rec.radio.amateur.equipment

From: blairt@direct.ca
Message-ID: <37c9e056.4618035@news.direct.ca>
Source record: 99702

Hello all. Can someone succinctly explain how to zero beat a Kenwood TS50S? I've been told to tune an incoming signal to the point where the pitch (lowest) just disappears, and then go back 600 HZ. Is this oversimplified, or should that get me close enough? They've been talking about zerobeating on QRP-L, but some of the discussion has left me in the dust :) Thanks
Blair VE7HHH

Source record: 99712

I am looking for a few things on-line and apperiantly I need to turn to users of newsgroups for help :) Which is no biggy for me I learn a lot from newsgroups. I mainly do it for FCC Bashing and venting...lol.

So here is a list of things that I am having problems finding.....

1.) Any and All Mods possiable for Yaesu FT-50RD. Donot respond to this thread about this please e-mail me.....any sites, mods period, etc. I have looked on the QRZ database and others and found nothing. But I have found it's "brother" the Yaesu FT-50R. Are them mods the same for the 50RD?

2.) Cutting Edge Enterprises/Power Port. Do they have a website. I ordered there catalog and I just can't wait for it to arrive in order to get some power supplies and that.

3.) How do I obtain my MARS/CAPS Permits? Is there a website or anyother advise that ppl can give me about getting that. I have a medical condition that wont allow me to drive : (So I don't know about getting the permits, if "Uncle SAM" will allow me to do so. Discriminating little bastards....grrrrrr

4.) A good and cheap site that I can order things like amateur radio t-shirts, hats, pins, pens, QSL Cards, etc. Is there a site like that?

As you can tell I am anti-government and I plan on being that way until I die :) Nothing no one can say will change that. I hope that we all put our differences aside just for a few seconds to respond to each others posts/threads. And just be willing to help out when someone asks for help.

Hello ppl :)
I need to know where there's a site on where I don't have to download any "practice" tests and that I can take them (the tests) on-line for me to pratice and being able to get my ticket. I have been studying for about two years off and on and my goal is to get it by this year. But first of all I need to know where I can get my hands on any on-line tests/study materials. For which are like hands on. The reason I am asking about this is because I am on WebTV and WebTV CANNOT download. I have seen several sites on where I have to download in order to take the practice tests and study from the materials provided. If anyone can help please feel free to drop me a line and all the help would be greatly appericated :)

From: Derf <ke4ros@hotmail.com>
Message-ID: <7qdqh9$ha7$1@nnrp1.deja.com>
Source record: 99716

Hello all,
My question is, what unit of measurement does an AF Voltmeter indicate?
Is it Peak, Peak to peak, or RMS? I don't have one, but if I can find
out what the unit of measurement is, I can use my O'scope instead.

thanks,
derf/ke4ros

5022. Heath wattmeter, phone patch and other goodies FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-30 00:00:00 UTC
From: Ken Simpson <W8EK@usa.net>
Message-ID: <bKty3.1205$Dj2.78713@monger.newsread.com>
Source record: 99717

Heath items for sale:

Heath HM-102 Wattmeter. This is the HF version of the
wattmeter, and scales for 200 W and 2000W, as well as SWR.
It has a removable remote sensor, so the meter can be about
3 feet from the sensor. This looks in great shape, not quite
like new, but close. $ 40

Heath HD-15 phone patch. Separate control of transmit and
receive audio, with nice VU meter. Will work with high or low
impedance mic input. Manual included for $25

Heath IP-27 low voltage power supply. It is fully adjustable
from about 0.5 Volts to 50 Volts, and has current limiting that
is built in and adjustable from a couple ma up to 1.5 amps.
There is also a nice large meter for measuring current or
voltage. The supply is "floating", so can be used for
either plus or minus supplies. It is the "Heath Brown"
color. Manual included. $100

I also have the following Heath manuals available. All are
originals, and are in good condition.

IO-103 Five inch scope $ 12

GR-2000 TV Set $ 12
GR-2050 TV Set - Five book set $ 18
GRA-2000-1 TV Clock $ 3
GRA-601 TV Clock $ 6

Prices do not include shipping from Florida.

E-mail to W8EK@fdt.net

Thanks.

5025. Mysterious horizontal lines on IC 756 display

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-30 00:00:00 UTC
From: "Dr. Know" <rmarks8231@my-deja.com>
Message-ID: <7qe1vdmih1@nnrp1.deja.com>
Source record: 99720

Hello Group,

I have a IC-756 that I bought new and is approx. 18 months old. I've noticed that mysterious horizontal lines will appear in the display at random locations. Sometimes they are intermittent and other times they will stay on the display for hours. This seems to happen more when the rig is first powered up but appears to happen more or less all the time. Sometimes these lines will obscure the display in certain areas when they overlap with something being displayed. It is also annoying.

Has anybody else in this group seen this before? Is there an easy fix i.e. re-seat a cable or board assembly or something??
Any help would be great as this problem appears to be getting worse.
Thanks and 73

5026. Ts-850s problems...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-30 00:00:00 UTC
From: Asle Fonn <asle@sotraweb.com>
Message-ID: <37CA8388.DF45CE95@sotraweb.com>
Source record: 99721

I hav a Ts-850s from Kenwood, it have worked fine for about 8 years now.

However lately it have benn making som trouble.
When the rig is warm (not overheaded) it drops the outpower from about
100w to 0 after about 0.5 sec. and after 2 sec. the
Power is up again. When this happens the alc meter jumps up.
I have seen this in CW, AM, FM and FSK mode.
I have tested this with both antenna and a dummyload and there
is no differense.....
When I have keydown the cycle repeats for ever 10 sec.

Is there anybody have seen this before or have sugguestions
where to start looking?

Regards
Asle Fonn

5033. Re: Question: AF Voltmeter

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-30 00:00:00 UTC
From: Crazy George <munsch@ibm.net>
Message-ID: <37cab377@news1.us.ibm.net>
Source record: 99728

Audio Frequency AC voltmeters are made to measure various parameters. Most simple meters measure average, but may be calibrated RMS, peak, or peak to peak, leading to wild inaccuracies for non-sinusoidal waveforms. HP and others build True RMS voltmeters, the old 3400 being a classic, but it doesn't cover below 10 MHz. There are digital true RMS audio meters like the Fluke 8060A, and peak reading as well as peak to peak. Usually a meter is well marked if it reads something other than average. If you have a "peak reading" voltmeter and it has a + and a - selector like some of the old Keithleys, it probably does read zero-peak. Otherwise, a VOM or VTVM or TVM, analog or digital, expect it to measure average on AC, and be somewhat frequency sensitive and very waveform sensitive.

> : >or something like that?
> :

There are a couple of different issues here. One is, what newsreader to use to access the newsfeed offered by one's ISP, and the other is, what to do if your ISP doesn't offer a newsfeed (or offers a bad one)? If you have the latter problem (as I do) then you use a web-based reader such as Deja or Remarq. I've used both. Deja threads a little better, and it archives things forever. It tends to go down alot, though. When it does, I switch to Remarq. It seems to load a little faster, but the threading isn't as great (It looks as though it just concatenates all the messages with the same subject line).

AFAIK, you can't just specify news.deja.com, or something like that, as the newsfeed for your local reader. You have to subscribe to their service - it's "free," but there are a lot of ads.

(Actually, I just remembered Deja will be offering something like that - local access to their newsfeed, with whatever newsreaderyou choose - but you will have to pay for it).

5036. Re: No Code Is Citizen's Band

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-30 00:00:00 UTC
From: noone@nowhere.com
Message-ID: <37cce56a.351490065@news.squonk.net>
Source record: 99731

Tim has a point, in that it does serve to qualify those who pass the code test, but it isn't as simple as a test of a willingness to do 'hard work'. It's a test of a willingness to do hard work without a real point. It's a form of hazing, IMHO, a ritualistic hurdle to cross. Kinda like the drill instructor having a guy move a pile of sand from one place to another.

It shouldn't be surprising that this sort of thinking doesn't go over well in this country. We've always been a group of people more likely to say "why?" than "how high?", and I think that's one of our greatest strengths. "Because everyone else did", doesn't hold up as a good argument in this society.

You want to beef up the written test, to make it a more current test of knowledge? I think that would be great. Include something about digital design, or modulation theories (boy that would be nice), or FFT's - things that would give hams a better understanding of the technology that they/we ALL use.

Forty years ago, I suspect that most, if not all, hams had a great understanding of how their radios worked. What was the percentage of hams that build their own gear? How many people build radios from scratch now? Close to zero. Certainly only a few percent. Why? Because it's too hard??

Now how much sense does that make? How many hams have ever designed a PLL circuit? Laid out an RF PCB? With SO MUCH new technology out there, and ham supposedly a hobby with at least some interest in "advancing the radio art", this doesn't seem right.

I, for one, don't mind hard work. I enjoy it, as a way of improving my skills in some area, or helping out a person or a business, or whatever. I think most people do, or at least take a sense of pride in accomplishing something. But who enjoys working for something without taking benefit from it? Yes, you get the license, but it's an artificial barrier. You might as well have people move a pile of sand. Me, I'd probably figure out how to run an end loader.

Mike-

I purchased the TS-50 when it first came out. I replaced it with an Icom IC-706 when they first came out. In my opinion, the TS-50 is the superior radio, in spite of its lack of the Icom's fancy features.

As far as purchasing one today, consider that its design is now several years old. There are rumors that Kenwood may announce one or more new rigs within the next few months. Should they announce a replacement for the TS-50 that includes Six Meter capability, I'll be the first in line to buy one!

If you go ahead with the order, I hope you get a good price.

> talking about zerobeating on QRP-L, but some of the discussion has
> left me in the dust :)

Blair-

How you zero-beat depends on what rig you are using. I believe the TS-50 automatically offsets the CW signal, so that if you tune the received signal for a 600 Hz tone, your transmitted signal will be on the same frequency. (The rig's setup may have an option to choose other audio tones if your hearing has a notch at 600 Hz. Check the manual.)

Of course, many QRP rigs may be less sophisticated, since digital electronics would shorten battery life. In the case where the CW signal is not offset digitally, you may have a problem if you "go back 600 HZ" in the wrong direction. I suppose it is something you have to learn by doing. Try zeroing on a signal, make contact and see if the other station stays on your frequency, or if the two of you end up "walking" up or down the band!

5047. Re: FT-100 and screwdriver antenna?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-30 00:00:00 UTC
From: M Johnson <silversq@ix.netcom.com>
Message-ID: <37CAD9B0.50045040@ix.netcom.com>
Source record: 99742

Hi Ken,

I appears that the radio provides the right level of voltage to make the ATAS go up or down. The radio monitors the SWR and then shuts off the tuning voltage when it drops to a minimum. If you had a standard screwdriver that would respond to the same voltages that the FT-100 puts out I don't see why it would not work. Of course you would have to de-couple the DC voltage control voltage from the the coax. The problems with current screwdriver antennas are that all that I know of switch the polarity of the voltage to the tuning motor. The FT-100 just provides two different voltage levels of the same polarity. I also don't know of any current screwdriver antenna that takes it motor voltage off of the coax but, it should not be too hard to do that with proper filtering.

Amateur Electronic Supply in Milwaukee is currently listing one for $1719.95

5059. FS: Drake TR-7 / PS-7 station

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-30 00:00:00 UTC
From: Bob <xyz_P15218@flash.net>
Message-ID: <37CAEF8C.46@flash.net>
Source record: 99754

Drake TR-7 transceiver, PS-7 power supply, MS-7 speaker, FA-7 cooling fan, Drake desk microphone (7077?), AUX-7 board, two TR-7 owner's manuals, one TR-7 service manual in Drake binder (not copies). I am posting this for another ham who is not sure of other options in the radio but it appears to have a wide filter for AM in addition to the SSB filter but no CW filter, no noise blanker (the "NB" button does nothing). Condition: the radio receives, and transmits ok and appears to transmit on any receive frequency. There are scratches on the cabinets and the aluminum bright work on the top front of the TR-7 and PS-7. The front panels look good. He is asking $600 for the lot and it will NOT be separated. Shipping is not an option...come buy and pickup in the Detroit Mich area. Operation can be demonstrated.
Bob

Hi,

does anybody know a type of a handheld Transceiver working at 70...80MHz (RX _and_ TX), e.g. a cheap professional portable radio or a amateur-radio trx which can be modified (maybe vx-5r?).

The case: We are using some of these frequencies for internal communication on our plant and we are searching for cheap equipment.

Thanks

Johannes

> Please elaborate how the antenna gets involved in "motor noise".
> I run glassmounts on three rigs, with no problems at all.

I don't know about the glass mounts...However...One potental problem is
that of DC in the antanna coax shield. The DC power ground line and the
coax can be conducting the return current.

Steve

That's totally possible. It wasn't until I installed my new FT-90 that I started to get a lot of 'noise' in both rx and tx. A little troubleshooting found that the power ground was bad and that all current was being routed through the antenna coax to the antenna bracket on the fender. I quick repair of the power ground and voila!
No more noise.

The TS-50 is an excellent rig. Fine front end in mine. I agree with Fred - wait a little while longer - if you can - and see what Kenwood releases. I was at the Huntsville, AL hamfest a couple weekends ago. Kenwood was there. The rep told me they are about to release a few new products that are going to make hams all over the world salivate. (Practically his exact words!) If you decide to buy, don't pay more than $775, and I doubt you will be unhappy with the rig.

5081. MFJ - Lack of Service

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-30 00:00:00 UTC
From: tom <tsokol@injersey.com>
Message-ID: <7qfbnufmq1@nw001t.infi.net>
Source record: 99776

Does anyone here know what's up with MFJ service?

I sent in an MFJ-986 Differential Tuner. The tuning mechanism is fine, but the meter circuitry was bad. It has been almost 2 months, and I have not heard from MFJ. I know the tuner arrived OK because I tracked the UPS delivery. I also called and asked a Customer Service Rep to confirm it is there. They said it was there, but could give me no est. time for service. I know the usual practice is to get something in the mail confirming delivery, but I did not even get that.

In other posts I have seen suggestions to call Martin Jue, but let's be realistic....a simple tuner should be able to get repaired without intervention by the owner of the company (assuming I would ever be able to get through to him anyway.)

The tuner probably just needs to have the meter circuit board replaced. Had I realized MFJ was this poor in service I would have ordered a new board and replaced it myself....(yeah, I know...20/20 hindsight!)

Have others here had problems with MFJ service, and if so, any suggestions???

Tnx & 73,
Tom

My Father tells me a story of back in the 60's when he and his partners put a new AM broadcast station on the air. He said they walked for miles through corn fields, swamps, you name it, I am sure all uphill also, to do required field strength readings. The same story through the years drove home the point of ERP and its relation to direction, ground radials, and lobes etc. etc., not just a good match to the transmitter.

5088. Re: Selling a "XXXXX" MINT

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-30 00:00:00 UTC
From: Doug McFall <mcfall@srv.net>
Message-ID: <rsmjlvs3j7148@corp.supernews.com>
Source record: 99783

Amen, I posted a scale of one to ten last year, and would like to see that used. It went from a ten being in the box never used, to a one, chassis only with parts missing? It seems when someone list their prize radio as a seven, then it is toast. We need to be honest. Mint is in a sealed package from the mint. By the way, this message is mint, so please dont read it.

> Gary - KJ6Q
> --

Gary,

I believe you are doing it just right. The screwdriver is almost
as good as a Texas Bugcatcher on 75 and will QSY right on up to
10m while you drive. Using a coupler be it SGC or Icom or Alinco
or what ever with a random long wire is best from the camp ground.

I do the same thing with rental cars and since I don't have your
counterpoise I use ground strap to the common RF ground with a
plate on the other end and toss the plate in to a stream or ocean
or what ever I can find to increase my ground leg.

How ever all of these arguments can be settled, if someone has a
system he is fond of bring it down to El Paso and we will find out
what it can do. A most interesting case was that of a beautiful
bugcatcher style antenna that showed up a Santa Barbara the coil
was stainless steel and the ohmic losses were so great that it was
beaten by my Outbacker Perth on a mag mount. Not very impressive
for a $500 antenna.

Come one come all to El Paso and we shall see ho it all shakes out.

5096. Re: Advice on a world band receiver

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-31 00:00:00 UTC
From: Butch Magee <butchkay@netdoor.com>
Message-ID: <37CC2755.D038D275@netdoor.com>
Source record: 99591

If you rig up an external antenna it should do ok. That metel car keeps a lot of signals from getting into the car so that the receiver can hear it. I had the saame problem at my office, tooooo much metal. So I threw a wire out the windo into a tree and plugged it into the 2010. worked somewhat ok. You cant be too critical of these off the wall remedies you know! :o) IF YOU CAN REACH your cars radio antenna where it plugs into the car receiver, make an extension cable that will be long enough to reach the car seat (where I assume you will have it) and enjoy what ever you are able to hear.

Source record: 99598

Cushcraft is a Company that does nothing for its customers. We
installed a R 6000 one month
ago. Every So often the transmitted and received signal fades to
almost nothing, then
comes right back. After checking everything several times, my friend,
the owner called
Cushcraft. He asked if they could send him another black box so he
could substitute the
original. He offered to pay for it on the credit card and upon receipt
of the original
black box, Cushcraft would issue a credit.
Cushcraft refused to do that. They wanted $160. To submit a Warranty
claim, you would
have get a form, fill it out send it back etc etc. Bottom line we have
a $270 piece of garbage.
Just thought you might want to hear this before you plunk down hard
earned money,
on a cushcraft product.
By the way my own R5 un installed itself from my tower a year ago. At
least I didn't have to go up
there and remove it. I found it in the back yard on day physically
separated between
elements.

5123. WTB: Dead or BAD FT-100

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-31 00:00:00 UTC
From: "Jim C." <mrnstar@nospam.enteract.com>
Message-ID: <7qhs0c$80r$1@eve.enteract.com>
Source record: 99618
Cross-posted to: rec.radio.amateur.equipment,alt.ham-radio.marketplace

that's right with all of the bad things going on with the new FT-100, we want to buy one or two.

I have seen many posts in various newsgroups about the extreme disgust with this radio.

A couple of us are looking for FT-100's and are willing to work through the difficulties with Yaesu.

If your radio is dead or bad, whatever just NOT smashed, run over, dropped from 6 floors high, etc., you get the idea, I will buy it.

Of course we are looking for an extremely great price. We do not want to spend any more then $250.00 per radio. We will also consider a fair price if you have a working unit that you no longer want.

I would never consider such an insulting low offer any other time, but from some of the posts I have seen, some folks said they are about ready to pitch them. So if that is the case let us know!

Also I am interested in the ATAS 100 antenna. I have seen a lot of bad posts on this also, want to try for myself.

Please send all offers via e-mail to morningstargroup@hotmail.com or decode the email address in this post and send there. Please do not reply to the newsgroup, since for some reason some of the newsgroup posts are getting lost on my ISP, and I cannot sometimes follow an ongoing thread.

Of course, like all posts, this one will generate flames, send those to mrnstrgrp@aol.com. I will check there first, really!

73's
Jim C.

5124. FS: Kenwood, misc HF ham gear

Hi,
Check out my for sale web page, please. Lots of
Kenwood HF gear for sale. Lots of miscellaneous
HF accessores for sale too including watt meters,
old straight keys, etc. Includes some digital
pictures.

I dont like EBAY much -- somehow jacks the price up and takes the spirit
away from swapping radio stuff. Didnt want to clog the newsgroup with
lots and lots of individual posts, so I put
this web page together.

http://www.papadads.com

thanks,
Joe

Date: 1999-08-31 00:00:00 UTC
From: Rocco Conte <rocco@superior.net>
Message-ID: <37CC81ED.4FAF7297@superior.net>
Source record: 99622

Hi all,
I have a FT-1000MP For sale. It rates a 9 on a scale of 1-10. The only mark that I can see is a small scratch that can be taken out easily. It is being sold with the SP-8 speaker, MD100 desk mike, FH-1 Remote control keypad and the DVS-2 Digital memory recorder. This unit has a clean bill of health from Yaesu. I sent it to them this past december to

have a cap replaced in the antenna tuner. Yaesu went through the whole rig for me. I can E-Mail pictures upon request. I have all boxes etc. I

did however take the manual apart when I scaned it into the computer to send so info
to a programer for the CAT program he was working on. The asking price is $2700.
and that includes the shipping in the US. The Serial # is 6HXXXXXX for anyone
interested. I can be E-Mailed at rocco@superior.net
Thanks,
Rocco

5128. Help! Kwd TS-940SAT ant tuner not tuning on 28 Mhz

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-31 00:00:00 UTC
From: Joe K7JOE <k7joe@yahoo.com>
Message-ID: <37CC80A0.9736DAC0@yahoo.com>
Source record: 99623

Hello,
I have a Kenwood TS-940SAT, with the internal antenna tuner. When using the internal tuner, it is no longer able to find a match with the tuner -- it just keeps hunting and hunting. Radio does this on a resonant antenna, and even into a high quality dummy load.

Suspect a problem. Anyone have a fix or some things to check?

Antenna tuner seems to work fine on all other bands (except 28 Mhz), --match is typically 1.2:1 or less.

thank you,
Joe

Amen again. I've used a couple versions of Netscape Communicator, Outlook Express, Outlook, DeJa News and I've recently landed on Free Agent and it whacks the rest by a long shot for Usenet ops. Very fast, efficient and highly intuitive. Has cut my online time significantly. My only squawk is that it does not graphically show quite all of the thread trees like Messenger does. No biggie. You do need an ISP without an agenda (AOL, MS) which provides direct newsfeeds and lotsa groups to get FA to really talk. I'm lucky in that respect with over 35,000 of 'em directly available 24/365. The curent maxed-out CD version of Agent with the book is now $40, the check is outta here shortly.

Oh noooo it looks like an out of warrantee repair. I was going to guess heat related until you said it happens when you first turn the radio on. I assume you still have these lines even after playing with the brightness/contrast levels.

I have had my 756 for 2.5 years and have never seen this problem. Call Icom, hear what they have to say.

Source record: 99648

ki0cv in denver co. first msg I read on talkaway.
used my mfj-259 a lot, now all my antennas work fine except a 3ele 10m
beam I was cutting down for 6m for my ic756. The gama match is all
silicon sealed, and I am to busy to finish that project.
My high tower and mosley 5 band and 2m 440 all woak great, so the mfj
259 just sits on the shelf. Tuneing coax feed line for 160 meters was
the last project. Will enclude the 50 ohm load for doing this.
Also have grid dip coils, if I can find them. So make me an offer,
enclude shipping. If you find one closer/cheaper, that's fine.
They are very useful. Did a 10m gamma match without 259. Climbed the
ladder 30 times. Boring. Now I can climb it once. 73, nick

Source record: 99653

28-03-1999 Expanding the Kenwood TM-V7: A & E versions English language

28-03-1999 Expanding the Kenwood TM-V7: A & E versions

Original TM-V7A Mod

Remove the top and bottom covers.

Look at the vertical p.c. board behind the front of the radio. There will be 2 small chip resistors on the left side of the board.

Carefully remove the one with the number 0. It will be the one closest to the left near the grounding spring. You will probably have to scrape it off with a pair of needle nose pliers.

After you remove it the VFO ranges should be:
VHF TX 136.995 - 173.995. RX should be 118-174.
UHF TX should be 410-469.995 RX should be 300-470.

Additional TM-V7E notes:

There is a row of five numbered links on the edge of the front panel board. In my E version radio, 0, 2 & 3 were made as standard. I now have only one link fitted in the number 4 position which enables the repeater function not defaulted in European versions. I have removed all other links.

I can now also receive the AM Aircraft band (118-137MHz). It is possible to change from AM to FM by pressing the MHz button for 1 second. Plus I have discovered doing the same key press (MHz for 1s) in the UHF band gives a 800-999Mhz RX band.

The European version has a 1750Hz tone-burst function, a modified band plan for the auto-repeater shift function, adds a -7.6Mhz repeater shift and sets the band limits to 144-146 & 430-440 - the AM Air band & 800Mhz bands are disabled. All these European 'features' are lost when the radio is expanded.
(The repeater offsets are still programmable, but you must learn how to whistle at 1750Hz). I think the only other difference between the A and E versions is that the E version has an N type antenna connector fitted.

Making link number 5 causes the radio to power up in a Memory recall mode (i.e., with channel numbers) and so is not overly useful!

I'm not sure exactly what links 0, 1, 2, & 3 all do individually! Maybe other configurations are possible: any information would be gratefully received.

As for RF performance, the front-end (and PA) must be tweaked to use frequencies other than the factory alligned defaults, with a little tweaking out of band performance should come good (at the expense of regular 2m/70cm

performance).

The chip resistors are SMD zero ohm things - a wire link (or solder blob) will do the same job. They can be carefully removed (for re-use) by using a fine tipped iron, de-solder braid, and a pair of long nose pliers or tweezers. The front board can be carefully detached from the rest of the radio to make removing the links easier.

Thanks for reading this.

This is what I got:

Two radio amateur 27MHz (11 meter) trancivers with external speaker
connection.

This is what I need:

A device waiting for a special modulated signal from another device
connected to the other tranciver. When the signal is encountered by the
local tranciver, an alarm should ring. I need this for
(free) telephone-like communications with some friends.

1) What can I call this device?

2) Where can I find schematics for a homebuild device?

3) Does anybody have experience or suggestions that they will tell me?

Thank you very much

OK, I went out and looked for info on XNEWS and found the following
comments on Xnews in ZDnet.

"Xnews is designed for the hard-core newsgroup fan. It handles all the
necessary tasks quite well: retrieving messages; replies (either to
the newsgroup directly or through email); deleting unwanted messages
(via a score file); and decoding binaries in a variety of formats.
Other features include multi-server/user support, article searching,
and customizable options such as headers and signatures. Although
Xnews is a very competent newsreader, the interface isn't particularly
intuitive (the author designed the program for his own use, not the
general public), so those new to the world of newsgroups might want to
try another program. Those with some experience, however, will find
the program, particularly for free, to be a good choice."
"Reviewed on Feb 15 1999".

The download version is a 32-bit beta. Beta?? Uhhhh . .

To me this sez that Xnews is for experienced computer folks rather
than most hams who would rather just plug 'n play without having to go
thru configuration drills and a learning curve just to be able to jump
in.

Hi, name here is Les. I have purchased a Kenwood TS-50S so my TS-140s is for sale.

The 140 is a general band receiver and HF rig for 10 mtrs. to 160 mtrs. Full 100 watts, FM board, power cord, mic and photo-copied manual. Works great and looks good [all the front panel markings are clean and visable].

Asking $450 + shipping.

Contact me via: E-Mail at kbtgw@spec.net or via Telephone at 516-295-0696.

Tnx and 73 de Les K2TGW

Hi Al,
For something that is not worth $400, I bet " bonehead" will be the first
in line with HIS $400 to buy it!!
The 850 is a great controller, and all parts are common, so support is
never a issue! 73s

Yes. Just about all VHF/UHF radio's have an internal adjustment
to decrease or increase the PL tone level.

Hi All,

I have a new Yaesu FT-90 and the PL on 70cm is way too hot. It's
around
1.6Khz.
Is there a way of adjusting it, or am I stuck with sending it to
Yaesu?
Any help is appreciated.

I would call MFJ, order the board, and ask that your Tuner be sent back. Do the repair yourself if you know what the problem is.

I have found MFJ's Service Department to be quite 'non-customer focused' when I have contacted them to ask questions. Also, I have never received an email response to an inquiry.

73,

Mike

While you seem to make a lot of valid points, try not to compare MINT in the sense of a reuseable item (like a radio) to MINT in the sense of a one time use item like a stamp. I HAVE seen what appear to be several MINT condition radios out here, I am currently in the hunt for a MINT condition Ten Tec Omni 6+ HF rig. When I think of MINT condition, I feel like the only thing that would make me believe it is not factory fresh is the fact that I may have to wipe some dust or fingerprints off the rig... By the way, it cannot be MINT if I dont get original packing materials.. Without those it is only an almost new radio...

I think a much safer route to take is to compare the dealer below with my 16 yr old kid. MINT to him sounds about like 'yes dad, my room is CLEAN'...

Doug-

There is a similar problem with used cameras. One of the main sources of used equipment is the "Shutterbug" magazine advertisements. When the magazine first started, it was called "Shutterbug Ads", and they had a rating system ranging from SA-1 to SA-10.

In spite of their good intentions, the system has been corrupted so that you wouldn't want a camera that wasn't at least rated SA-9. In other words, a camera that is honestly rated will never sell for a fair price.

Personally, I liked the old Amateur Electronic Supply group in downtown Dallas, and always thought of Gerald and the Tx Tower guys as AES wannabe's... That was a long time ago.. Now AES is gone, the Heathkit store next door is gone, and Tx Towers survived.. I have dealt with Gerald and the folks there on several occasions over the years, and noticed one thing. These people are in the mail order ham business 'period'. Sure they have a small storefront, and they do support local HAM events, however, if you walk in there anytime, you will find most of the guys on the phone explaining to some poor schmuck the ins and outs of some piece of gear... Face it, you come to these types folks for the best $$$ deal you can get. You cross your fingers, and when everything works out perfect, you get what you want, at a price that is probably better than a big storefront shop. These types of stores generally post exactly what the return policy is, and will stick to it by the letter in most situations.. Send the radio with all packing and docs to the highest person you can get a name for at Yaesu and they will probably be able to help... Explain that the radio didn't work out of the box, and that you have made NO warranty busting mods (if that is not true, bite the bullet and get it repaired and pay for it)...

If you dont like the Tx Tower way of doing business, go pick up a Kenwood from Fry's electronics (at retail cost) and notice their policy for returns...

> what measurement unit the 5mv is in... can anyone help define this?

derf-

Although there may be an "official" definition, there is sometimes a
confusion about "mv". Depending on how it is used, it could mean either
millivolts or microvolts. In this case, I'm fairly sure it is meant to be
millivolts.

On your AF voltmeter, 5mv would be read as 0.005 volts, or 5 thousanths of
a volt.

5179. Help ICOM 738

Newsgroup: rec.radio.amateur.equipment
Date: 1999-08-31 00:00:00 UTC
From: Oris <oris@dirtball.com>
Message-ID: <37CBED02.652A98BA@dirtball.com>
Source record: 99677

Hey Guys
I bought a rig from Murry Neece. I'm truly not happpy with the ICOM 738. It has pintched tinny audio and the digital readout on the low bands is 200 HZ low off frequency the tunner doesn't work on the 75 meter band. The rig interfears with TVs phones and everything else when I'm on 75 meters. Its just 75-meters that I'm having the interfearance problems. On ten its as clean as can be. The tunner works great on ten The antenna setup is the same setup as my old TS 930 and it didn't interfear with anything even at 1500 watts on ten. This is the same radio as the 736 except it doesn't have 6-meters and it doesn't have the powersupply. Can anyone send me a copy of the service manaul so at least I can fix the pinch up audio and find out why the tunner doesn't work on 75. I asked for sujestions from Murray Neece to help me with the rig and he said ,"You are really kinda fulla shit oris." then he offered me my money back less shipping. Well I donn't think that that is the solution to the problem. He really should of been a used car salesman. He did talk me into this rig.. Anyway getting my money back so he can unload it on someone else isn't right. The right thing to do is fix it and make it right. Enough of that.
Does anyone have a copy of service manual on this rig I can get and does anyone have any sujestions what to do with the rig to make it right, other then stick it where the sun don't shine or put it in the trash can toilet etc etc etc......
Thanks
73 from Oris

I know that ths Kenwood will do inband and cross band repeat are there any others that can do the same in a mobile format. What I need is a mobile that will allow me to transmitt on 2m and retransmit to a distant repeater. Os will allow me to transmit on 70cm and crossband to 2m. I can find plent of radios that will crossband 2m to 70cm. All of this of couarse depends on weather the radio has 2 actual VFOs and weather what bands can run and when. SO ...Any other radios that fit the bill. And comments are welcome about this (TH-V7A) or any thing else.

Thanks,

Source record: 99442

Excellent condition Kenwood TS-450SAT transceiver.Only a couple of
small scratches on the top of the case. Works perfectly and puts out
full power. Has the auto tuner inside and it works wonders with my
parallel dipoles. Comes with the following:

Power cable
Instruction manual
Programming manual
Desk microphone, not a Kenwood but it works well.
1.8 khz narrow SSB filter (Kenwood YK-88SN-1)
I don't have the original box, sorry.

Can hold 2 additional filters in two IF's.

Asking price is $750. including shipping and insurance to your QTH.
Contact me by email if interested.

Hi:

I've seen one prior posting similar to this problem. I was wondering if anyone has experienced a problem with the DX-70 where the display starts to blink; then no receive on USB. After Resetting the CPU, the problem persists. Shortly after, both Transmit and Busy LED's light, the S meter pins, and a burning smell comes from the rigs body!

My DX-70 at 4 weeks old is at Alinco for warranty service (no thanks to HRO who said 'we can't replace it if its 4 weeks old already!!!).

Mike

Many years ago I tried something similar, and the
buzz/hum/interference the Commodore 64 produced on 20 meters (on my
Icom 735), made it impossible to hear any incoming signals.

Source record: 99456

I have a new FT-100 (actually it belngs to KF6TQI) I bought it at Dayton in May. I have only recently hooked it up and it works great. So far I have found no problem that could not be resolved by a little more careful reading of the operating manual. I have made no modifications other than installation of one optional filter, the TCXO and CTCSS decoder. Yes there are a few things I would change if I could. For instance I'd like to be able to get to the keyer speed setting with the push of just one button. Any radio this small with so many features is going to have to use menus or some other method to make a few controls perform multiple functions. So far this one performs 100% as advertised, and as described in the manual.
So what I'd like to know is this: Is ther a list of things that I should check out to see whether I can a fault in this rig and become yet another ranting dissatisfied customer?

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=156415915

Data Tek 9600 Mfg: Atlantic Research Corp. I DON'T know too much about this unit but appears to have capabilities as a
Generator, Data Format, Async Analyze with Modem and Terminal ports. Lots of dip switches, lights, knobs, a meter and
such. Operation Instructions are provided inside the case on a paper attached. Looks like it was used to by the local Telephone Co. but might have other TEST applications? Unit has a nice steel carry case. Sale condition "-AS-IS" but unit
only tested with power only. Meter fluctuates also when switches are moved. Uses 120vac plug provided. Also c/w (2) ERPOMS - Ship weight 7kgs (16lbs) so approx. cost will vary between $8-15USD GROUND depending on your location or
$22USDAIR- within CONUS so bid accordingly. Email for questions or concerns but I don't know too much about this test
unit hence the NO RESERVE bidding.

Tim seems to be a troll that has nothing better to do than put down the FT-100. He was bad mouthing the thing here and on the FT-100 mailing list before it even came out. He does not have one, Has never had one and I hope never does. There have been some users with problems but they are few compared to how many he professes. For some real information from FT-100 users sign up on the onelist FT100 mail list and read the archives to find out that the vast majority there love their radios.

I have had mine all summer and have not had any problems with it. It makes a great mobile rig.

Hello. I have a 10m-40m/WARC Trap diapole for sale. It includes the balun to connect a coax right into it and the manual. It will handle 600w PEP and will probably load on any frequency between 7-30 MHz if you have a good antenna tuner. It's overall length is 55ft but it only around 30ft for the upper HF bands. Can be mounted as a sloper, diapole, inverted V, etc. It's certainly not new out of the box, so cosmetically it around 70%. Works 100% and I've never had any problems with it. Never been used above 150w and I'm the original owner. The balun and traps are in excellent condition. I will ship it to you for $50 UPS Ground or USPS Priority Mail, your choice. Let me know if your interested. Thanks for reading.

Actually, now that I search my recollection a little more, everything was fine on 2 meter FM packet -- no reception interference at all from the Commodore -- it was on all the HF bands where the RFI from the Commodore produced continuous birdies/hash across many of the bands. I was using, if I recall the brand correctly, an AEA modem with the Commodore 64...

Steve -- I used a Curtis EK-430 for the TS-830S and now use it on the
TS-850SAT. I like it a lot better than the built in keyer. No mods
necessary for either rig -- has a switch on the back.

Have seen them on E-Bay and rec.radio.swap

I had a similar problem with another antenna (non Cushcraft). The receive would fade out. The strange thing is that on transmit, the SWR would show as normal. I pulled my hair out over this. After a lot of substituting of coax, components, etc., I found out that the coax L connectors that I was using on the back of the antenna turner apparently went bad! Replaced them once, same thing happened, and replaced them again. Been o.k. ever since. You never know, the darnest things, and the things you least expect, can be the culprit. Good Luck!

Regards,

Duffy - WB8NUT

>looks as though it just concatenates all the messages
>with the same subject line).

I work for remarq, so you can take all my comments with a
grain of salt- I am undoubtedly biased :-)

I can't speak too well to what Deja is trying to do with
their service but I can tell you what we are trying to do
with the Remarq service. We want to make a discussion
interface which is easy to use for everyone and is also
fast. As such, we try to optimize the interface to
minimize the "web clicks" to the end user, since each click
represents a network transfer. This means that when you
view a discussion on remarq, you'll see the entire
discussion in one shot, rather than having to click through
each article.

And yes, we thread articles based on subject line
matching. In fact, we even group "like" postings
together. For example, often posts will come in for
"Mickey's photo album part 1/5, 2/5, ..." Those will be
grouped together within one thread for quick viewing. This
also reduces the size of the list of threads that you have
to download since you don't see multiple entries for a
bunch of articles with the same subject line.

Deja keeps a good long backlog of articles. We only
archive a few months worth at Remarq. But I don't believe
that Deja carries any binary groups. Remarq carries both,
and the binaries take a heck of a lot more disk! :-)

>(Actually, I just remembered Deja will be offering
>something like that - local access to their newsfeed,
>with whatever newsreaderyou choose - but you will have

>to pay for it).

You can get this from Remarq if you'd like. Its called a
"personal usenet account". I think it costs around $12 per
month or so.

If you try remarq and have any problems just drop us a note
and let us know what we should do better.

Good luck,

Mike

My recent experience backs up these kinds of complaints about
Cushcraft's lack of responsiveness to customers with valid problems
with their antennas:

I recently sent them the following query:

>> My D4 is doing something strange. A strong windstorm last week flexed the
>> antenna more than usual. After that I had an erratic high SWR problem that
>> seemed to be caused by antenna movement (flexing). I rechecked all the
>> connections at each trap, tightened everything, and it was OK for a day but
>> is doing it again. When transmitting at 100 watts (full power from my
>> exciter) into a 1:1 load, the sudden blip in SWR causes the final
>> protection circuitry in the exciter to trip. This happened with 3
>> different exciters. I''m afraid to use my linear because the sudden blip
>> in SWR could be disasterous at 1 KW. The problem seems most severe on 15
>> meters. The antenna will show a low swr at under 25 watts, but as power is
>> increased, it suddenly pops up to 4:1. Is there something mechanical inside
>> the trap(s) that might short out with mechanical movement? Do these traps
>> ever go bad? If it is a bad trap, how do I locate it?

The answer I got back was:

> It could be a problem with the trao or the matching network.
> Regards
> Cushcraft

To which I asked:

>What is a "trao"???? Which matching network?? (Note that the
>problem is there in 3 different rigs--e.g., not a transceiver problem.)
>

Their answer was.... nothing. Ignored.

Anyone in the Phoenix area want a free (problematic) D4? (I have to make room for the new Force 12 antenna I bought after the above experience with Cushcraft.) Force 12 has superb factory support, in my experience.

Ooops I meant TM-V7A. What this radio does is inband repeat as well as cross band. Like I said earlyer I CAN find plenty of radios that will crossband but I don't know of any other radios that will do in band repeat. And only a few will do crossband in UHF/VHF and VHF/UHF. Most will only do crossband VHF/UHF. What I'd like to know is are there other radios that will do inband repeat? OR at least to crossband in both directions.

Hey Joe Ham... You have probably thought of this but could it be your coax connectors? I had one that like to drove me nuts. How about water in the coax? Belden 9913 is real bad about water getting in if you do not take special precautions sealing the connectors. Sounds like something could be arcing across.

I was told by a Dealer there is FT-100 MK II coming out next year. I expect the price on the existing FT-100 MK I to Plumet.
Yaesu USA denies there is any such radio in the works. It sort of reminds me of the Icom 706 line. icom denies the new radio until it is on their Web site. Same story with the ICOm 756 PRO. Alinco DX - 77.
Most of my info comes from BRITISH Ham Dealers who have been 100 % right and appear to get info say 6 months or more before the radio is announced in the USA.

5254. G-800SDX, wiring confusion

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-01 00:00:00 UTC
From: isimco@aol.com
Message-ID: <19990901100211.08456.00000263@ng-fr1.aol.com>
Source record: 99558

Hello,

Just picked up a new Yaesu G-800SDX rotor and noticed there is a error in
the wiring diagram. The instructions state to wire pin 1 to 1 2 to 2 ...
etc, with pin 6 (center pin) not being used. The diagram shows pin 4 as the

center pin. The actual connector that plugs into the rotor has pin 4 as the
center
pin.
Does anyone have the correct wiring for this?

I am running more than 125 feet and will be using a larger diameter wire
along
with 2 of the wires larger than the rest. The manual does not state which
pins
to attach the larger wires to. I am guessing the larger wires are for the
motor?

thanks,

Ken

Absolutely LOVE my TS-50! Thinking about getting another one just for the RV. Paid $650 in new condition from the internet.

Two weak spots to watch out for though:

1) the headphone jack is a mini-jack and requires an adapter to banana plugs. This creates a BIG lever arm which tends to bend up the internals of the connector and eventually no headphone op! I replaced the connector and hand-soldered a mini-jack directly to the headset.

2) the center conductor at the SO-239 is at a 90 degree angle off the PC board. With normal mobile vibration this will eventually break at the solder. I replaced it with stranded lead and it's been fine ever since.

I think this is the BEST RADIO for HF mobile ops.

5264. Ref Osc problem in FT-726R/6m

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-01 00:00:00 UTC
From: Scott Townley <nx7u@primenet.com>
Message-ID: <37CD464A.15123182@primenet.com>
Source record: 99568
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment

<Exposing ignorance>

The reference oscillator in my FT-726R 6m unit PLL circuit (if you care, 6.4MHz xtal osc w/ 2SC945P transistor driving a divide-by-64 CMOS chip) doesn't have enough voltage output to drive the divider. Known working modules generate roughly 3Vp-p into the divider; this one is generating 0.3Vp-p...not enough to trigger the CMOS gates.

The osc circuit is very simple, XTAL is series with a tuning cap and hanging off the base of the transistor; base biased with resistive divider; emitter (output) AC-coupled to divider and a 3.9kohm emitter feedback resistor to ground.

One other symptom is that the DC emitter voltage is significantly lower than specified/measured on a working unit (broken is 3.5V/3.9k for an Ic=0.9mA; correct is 4.9V/3.9k for an Ic=1.25mA). Collector and base voltages are spot-on (should be since the collector is the power supply bus rail and the base is just divided down from the collector...common-emitter configuration).

How would one increase the amplitude of the osc to the correct level? The freq is right...I've replaced the transistor on general principles but that changed nothing. Weak crystal?? Lower the emitter resistor value to get more Ic flowing?
<Covering up now>
Thanks in advance!

5272. Re: Help! Kwd TS-940SAT ant tuner not tuning on 28 Mhz

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-01 00:00:00 UTC
From: Keith Hester <ks9c@chorus.net>
Message-ID: <37CD63EB.4856EE2A@chorus.net>
Source record: 99576

Hi Joe,

Question: Does your TS-940 appear to work properly on 10 meters when
the antenna tuner is disengaged? The reason I ask this question is that
if there is no drive or output available on a band, the antenna tuner
has no signal to work with and, consequently, cannot find a proper
tuning.

Keith

5273. ICOM AH2 Marine Version Antenna Tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-01 00:00:00 UTC
From: Bea Palmer <bea-palmer@email.msn.com>
Message-ID: <uCdjoEK9#GA.292@cpmsnbbsa05>
Source record: 99577

this tuner will load anything more than 8 ft long or up to as much as 125 ft
. it has 6 memories. it is water proof and retails for about 600 +dollars.
it has the h.d. ribbon cable and 4 pin connector and an rf pigtail already
so that it doesnt have to be opened. would trade for an MFJ259b in new or
near new condition. fred WA5WZD 940-321-2029 or Bea-Palmer @msn.com

5274. Re: Commodore 64/128 as a TNC?

Newsgroup: rec.radio.amateur.equipment

> MFJ sells a item (MFJ-1271) that turns a commodore 64 or 128 into a TNC.
> Has anyone tried this? How does it work? What modes to you get? Anything
> else? Thanks!

Among other things, they are prone to crashing with carrier up, and modem screaming. That was my intro to foxhunting. A crashed 64 was tying up 145.01 all over LA. Amazing what a 100W radio will do from a good location.

Get a real TNC. I've bought KPC-3s (a sweet machine) for as little as $20 online.

5275. Kenwood Manual Copies

5276. Re: Help! Kwd TS-940SAT ant tuner not tuning on 28 Mhz

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-01 00:00:00 UTC
From: Joe K7JOE <k7joe@yahoo.com>
Message-ID: <37CD6946.D08F512F@yahoo.com>
Source record: 99580

Hi Keith. Thanks for the reply. Yes, the 940SAT works
fine on 10 M with the tuner bypassed. It's just the tuner
that does not match on 10M. Someone mentioned some adjustments
to the tuner -- a procedure in the service manual maybe?

thanks,
Joe

Message-ID: <7qjp0f$li4$1@usenet.nau.edu>
Source record: 99582

I have an Azden 7000h 2m radio that was working fine except that the 2 bulbs that light the LCD display were burned out. In trying to replace the bulbs, I managed to "break" the radio. Any help or references would be appreciated.

In trying to replace the bulbs, I got in a hurry and instead of taking the front panel apart correctly, I tried to bend the LCD out of the way far enough to get to the bulbs (which I never got replaced). When I put the radio back together, the LCD displayed a bunch of garbage. I've reset the CPU to no avail. I've now taken it apart the correct way three times to examine the control board with the CPU and the LCD. I can find no broken traces, etc, but the edge of the LCD that has the "contacts" is chipped slightly (no doubt from my bending it up away from the board). It appears that it should make contact, but maybe not. In any case, every time I put it back together it displays the same garbage and the radio does not function. I can hear something that sounds like voices from AM radio (this radio does have AM aircraft receive) but it does not change by turning the tuning knob. It really appears that the control functions do not work.

I would expect garbage from the LCD if I "hurt" it and can still get a new one from Azden even tho they are leaving the US, however, I wonder if that will really fix the radio. Here's the question - is it possible that the CPU and/or control circuitry will not work if the LCD is defective? That is, could the control functions depend on a good display? If that is likely, I'm willing to buy the new LCD and install it (correctly!), but I sure dont want to throw good money after bad. As you all know, 2m radios are so cheap now, its not worth spending much money on fixing them. Time is OK, I've got that.

Any help would be greatly appreciated.

Thanks and 73s,

Bruce Johnson (NF7C)

Hello,

Please Check out this link:

http://kq6mu.8m.com

It has tons of Ham Radio Resources on it!
I spent many hours gathering this info on the page.
Some of the info includes:

Satellites, HF/VHF/UHF, Yaesu FT-847-FT-50RD page,
HF Rig Reviews, Ham Radio Classified Ads, and TONS
of Ham Radio Resource Links.

Webmasters:

Please add me to your links section, I can return the favour and
add your link to my page.

Thanks & 73,

Mike Green KQ6MU

I have several Radio Shack business band radios model BTX-120.
The battery packs are just like the ham rig HTX-202 and 404, and
also the Icom 2AT. The packs are 8.4 volt.

Does anyone know if this radio can handle up to 12 volts?

The BTX-120 is like the 121, 122 and 123 also.

Tim

5282. Need ICOM IC2700H mobile's face cable.

Hi All,
I need to pull my radio out and repair it.
Lightening got my 2700, AmFm, and a tree next to driveway...
But I've built my face to radio cable into the car.
If you have one you can spare I'd like to borrow or have yours.
I'm also willing to buy one if you wish to sell it, or know of one
of the retailers that may still have one in their clearence section.
I'll post this in .swap also. Tnx 73 Bobby K4BGA

I am closing the station at my summer home. This is my Ameritron
AL-1500 HF anplifier with 8877 final (2.4KW output potential with 65-75
watts
drive) and automatic fault protection. The amp was purchased new from
AES Feb. 1998, has been used less than 100 hours (I visit my summer home

less than 6 weeks a year) in casual operating (no contesting or data
modes), and is cosmetically and electronically in perfect, as-new
condition (the chassis isn't even dusty). Will ship to buyer first
week in October when I close the station. Comes with original manual
and factory packing. Cost new $2,570.Will sell for $1,850 + shipping
(AES now sells a 10-year-old model, without 17/12, for the same price.)
Tks es 73! Jan N0JR

Date: 1999-09-02 00:00:00 UTC
From: radioguy <radioguy@mr.net>
Message-ID: <00d301bef5bf$89ce2620$6358a0d0@woody>
Source record: 99413

EVERY dualband radio I've ever owned would do crossband repeat
BOTH ways.

VHF to UHF and VHF to UHF. None would do INBAND repeat.

Get a Motorola or a GE commericail rig and a 6 can duplexer if you
want
to do that. HAM rigs can't do it. Don't try.

Tom

Subject: TM-V7A inband repeat, the only one?

Message from the Deja.com forum:
rec.radio.amateur.equipment
Your subscription is set to individual email delivery

Is the TM-V7A (Kenwood) the only dualbander that will do
inband repeat in production? What about older radios for
inband repeat. How about any radio tha will allow UHF/VHF.
Most radios that I know of only allow VHF/UHF repeat. This
I believe has to do with the VFOs and how they're set up.
Basically I camp in some extremely remote areas and would
to extend the range of my HT via some method of a repeater
in my Jeep. Having a radio that can xcossband repeat with
an option of either UHF/VHF or VHF/UHF would at least give
me the option of the output band. So what else has the repater
options that match those of the TM-V7A?

Well, since you posted an ebay ad disguised as a "for sale"
posting, I'll add a bit of info to help the buyers:

The GPS 38 is a single-channel multiplexing receiver. Almost all GPSes
that you can buy today (with the exception of the Magellan Pioneer/300)
have at least 8 and usually 12 parallel receiver channels. These newer
parallel receivers have much better performance: acquiring satellites
faster, retaining navigation in poor signal conditions, and providing
more accurate fixes.

Since you can buy a brand-new 12-channel GPS for under $150 US (Garmin
GPS 12, Magellan 315), the value of a used single-channel receiver is
just not very high.

Hello,

I hope someone can help with this...I need to build a remote control with four channels in it...The thing is, that it must have about a one mile coverage...It is for a Carillon in a cemetary...The priest want to activate the Carillon for funeral toll from anywhere within the cemetary...I tried using a Futaba radio and two servos to hit four different realys to acivate certain features, but the distance was to far away and the servos went crazy...I can modify the design without a problem...I have thought of having the reciever and transmitter off of the same power supply and then using something to trigger a circuit in the transmitter...But I can not figure out how to get that distance...I tried some Radio Shack in house pagers, but I had four in this box and if I paged one, all of them would go off even though they are on different frequencies...Even if there was something that could transmit that distance and work those servos or trigger a little relay would be great...If any one can please help it would be greatly appreciated!!!

Thank you for your time,

Phil

I have for sale a Yaesu FT-911 FM hand-held transceiver. This unit is
for transmitting on/in the 23cm band in ham radio . It is about one year
old & I am selling it because I hardly use it.
It is in mint condition . I kept the box and never sent in the
registration for it .
Heres what it comes with :
CSC-35 case -(for the FNB-17 battery)
CSC-37 case -(for the FNB-12 battery)
1ea.- Yaesu FNB-17 7.2V 600mAh compact battery (new never used)
2ea.- MAHA FNB-12 12V 600mAh Ni-MH batteries (used very little)
1ea.- NC-28B Yaesu battery charger for FNB-17 battery (new)
1ea.- NC-18B Yaesu battery charger for FNB-12 battery(good condition)
+ the FTS-17 CTCSS Subaudible Tone Squelch Unit is installed in it.
I am asking $475.00 + shipping for the whole thing . I'm located in So.
Calif. Please e-mail me directly .
Thank-You

I have a mint BC9000xlt 500 channel scanner and Sony 7600G shortwave receiver to trade for an HF transceiver, maybe a TS140S or ? Must be general coverage. Must have mic, manual, etc. Would also consider trading for a Drake R8 or 2 meter rig in excellent cond. and PS. What have you got? Must be in excellent cond. Must be close to an even trade.

Bill K9KZ

Most "real" newsreaders (programs designed for reading news, not web browsers that also happen to have a news interface) will let you cancel your own articles.

Do keep in mind, though, that if your original article has left your own machine already, it's started its spread through the world. The "cancel" generates another special article that also spreads through the world. On *some* machines, the cancel message kills the original message. On others, cancel messages are ignored (due to past abuse). Some machines will never get the cancel message due to network problems. You'll never kill all of the copies with a "cancel".

I've become interested in the trunk tracking capabilities of the BC895XLT but I am wondering if it includes a toneboard. If not, can on be added? Also, can it be modified to pick up cellular? I know the UBC9000XLT can take a toneboard, is cellular ready and does wide FM too but dealing with trunked radio without a tracker is a real bugger.

I continue to dream of the all-in-one scanner that I can afford without selling a kidney.

The BC895XLT already contains a tone-board. To my knowledge it can not be
modified for cellular reception.

What does a new battery cost.
I just bought one for my Compaq that was $125.
It is a shame that computers costing thousands of dollasr just a few years ago have lost their value so quickly. I will make you an offer of $100 for the laptop based on the age, processor, limited memory (hard to run win/95 with less than 16m) and bad battery. You will be best off keeping it and using it as a loging computer for ham radio. That is what I willuse it for. Let me know if you want to let it go for $100.

I have an IC900 for sale with 2m, 220, 440 installed. Is in working shape, but some of the mounting brackets are missing (way it was bought). It is a very hot (sensitive) receiver especially on 2m!!

The 1st $600 takes it!
Postal money orders, or cashiers checks only.
Shipping included.

I do use remarq sometimes, and I do appreciate that it loads a little faster. If you are taking suggestions, here are some that would like to see implemented in Remarq.

(1) I actually prefer to see posts in plain monospaced font. Both you and Deja are trying to make it "easier" by formatting quoted text with a different color or style, and it doesn't always work. I don't mind seeing the little ">" thingys before each line of quoted text. Perhaps you could make that an option, at least from the MyRemarq page?

Also, I've noticed that it seems that remarq will not show text written between those sideways carat figures <> Here is a test:
<can you see this from Remarq?>

(2) I actually prefer not have all posts with the same subject line grouped together unless they are in the same thread. Sometimes, posts with rather generic lines like "request" or "help" get grouped together without belonging together.

(3) Could you show all the newsgroups that something is posted to when it is cross-posted? Also, how about an option to view the entire header (useful when you think someone is spoofing or forging a post). This goes for Deja, too - an option that is not available there unless you select "view original usenet format."

(4) A .sig file option would be nice in MyRemarq.

(5) Also, killfile option would be nice from Remarq - and Deja.

Nick

One of the MFJ products I've purchased (the cheap low-pass filter)
became defective a couple of weeks after I got it. MFJ was very
helpful on the phone and replaced the filter with no hassle.

I've found their phone and email support to be very good, each
time I've needed it. And having so many of their manuals freely
available on the website is great, IMO. Not only is it handy
for people who lose manuals (like me), but it also lets you
learn more about a product before you make a purchase decision.

Then how about everyone who is concerned going to the FT-100 list and checking out the archives for themselves. There have only been one or two people there who have said they did not like their radios and gave them up after problems. The majority of folks, even the few who have had problems, love their rigs.

You can get to the list by going to http://www.onelist.com and search for the FT100 mail list.

This guy is comparing apples to oranges. WALMART, K-Mart, & Home Depot
Don't sell ham gear, so who cares about their return policy on a Bra or can of
windex. Radio shack's extremely limited selection of 2 or 3 ham radios
consists of mostly way overpriced Non-Japanese made stuff. Their current 200
milli-watt "no-keypad no battery pack, & no charger" HT sells for a whopping
$180!! Much More than just about every 5W full feature, full keypad w/ batt &
charger HT!! (I'm sure they have already sold thousands of these, even before
it ever goes "on sale") It is also more than double what most of the 200 to
500Mw similar rigs sell for. That is why theycan afford have a 30 day return
on their stuff. HRO, Texas Towers & just about every other Ham dealer sells at
rock bottom mail order discount pricing (usually less than 10%), which is what
us hams expect from them, & they can't afford to allow 30 day free "test drive"
switcharoo policies on the real ham gear they sell. I agree.

My Ten-Tec Pegasus experience so far:

My new Ten-Tec Pegasus arrived yesterday (9/1/99).
After dinner, it took less than one hour to install it and be on the air.

I had no problems with the hardware installation, thanks to Ten-Tec
providing all the cables, and even spare connectors. I think it
has an attractive looking case.

I had no problems installing the software. The Ten-Tec instructions
were clear. I'm using an old 75 MHz Pentium laptop with Windows 95.

The software and the radio worked the first time without any
problems. That's more than I can say for some products these days.
I spent most of my time exploring the various controls and settings
to learn what's there. It is quite different not having knobs
to turn, but it seems like it will become easy with a little practice.

The receiver sounds good. I first did some shortwave listening all over
the spectrum, and then made a CW contact in the ham bands. It is
clearly "adequately" sensitive and selective. Its nice to have a large
number of filters to choose from, rather than just two. The
DSP notch filter worked to eliminate a heterodyne, but I didn't
notice much effect from the "Noise Reduction" filter. The built-in
speaker had an occasional "rattle", but the sound on the headphones is
perfectly clear. After I learned how to turn the power output up,
I made a CW contact. I got the usual 5NN. I didn't ask for a
signal report in detail, as they were busy working down a pile-up.

In my opinion, after 25 years of ham radio, and experience with dozens
of other radios, this is clearly a "good" radio. I can't yet say if it is an
"exceptional" performer or not, since that will take more time and
experience in more crowded band conditions. So far, I'm happy.

Best Regards,
Mark Aaker K6UFO

I have several Bird Slugs for sale. All are in good condition.
They normally sell for $75.00 new, I will take $35.00 each including
shipment to the lower 48.

5C - 5 watts 100-250 MHz Qty 2
500E - 500 watts 400-1000 MHz Qty 1
500C - 500 watts 100-250 MHz Qty 2
500A - 500 watts 25-60 MHz Qty 1

Source record: 99528
Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment,alt.radio.scanner

Cellular reception on the BC895XLT has been written about using Virtual Downconversion. It employs enabling the 800MHZ filters on, while searching through 360-380 MHZ. The 895 also must be in NFM mode while doing this instead of the default AM, so one must find the lines which control the modes and swap them out. It CAN be done, yet one needs a service manual to attack it. Steve Donnell, the creator of VDC wrote about it, so I'm a believer.

Bill Crocker wrote:

5359. TM-V7A inband repeat, the only one?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-02 00:00:00 UTC
From: mwilsher@earthling.net
Message-ID: <7qmhhbuvd1@nnrp1.deja.com>
Source record: 99529

Is the TM-V7A (Kenwood) the only dualbander that will do
inband repeat in production? What about older radios for
inband repeat. How about any radio tha will allow UHF/VHF.
Most radios that I know of only allow VHF/UHF repeat. This
I believe has to do with the VFOs and how they're set up.
Basically I camp in some extremely remote areas and would
to extend the range of my HT via some method of a repeater
in my Jeep. Having a radio that can xcossband repeat with
an option of either UHF/VHF or VHF/UHF would at least give
me the option of the output band. So what else has the repater
options that match those of the TM-V7A?

Phil, assuming you need 4 outputs not 4 analog channels why not just use two of the new single channel family radio service hand helds? I think I saw them the other day in a wholesale store for around $56 for a pair! Now build a simple tone decoder for the recieve end something simple like a 567 etc. At the transmit end a simple tone generator using a 555 timer should do the trick. If the reciever is up in the air you should easily get a mile or more. Email me if you want specifics.

Tim

DITTO HERE TOO! Nearly everything in my shack is MFJ except for my 4 hf rigs and 3 VHF toys. Martin, the owner, who's initials just happen to be MFJ even built my amps which are Ameritron but, Martin owns these too. Any problem you may have with MFJ will be repaired or replaced "no matter what". Who else makes a warranty like that? The first antenna tuner was an MFJ-16010 That was lost/stolen when we bought another house. I wish I still had that tiny 'lil tooner for my swling and qrp'ing. MFJ does a great job of supplying Amateurs world wide with great equipment that they couldn't afford otherwise from the big names in amateur radio. It does look like MFJ is taking over the big names also. I love it.

Jarrod,

Yes, the FT-50 cable will work with the VX-5. I would suggest using the EVE software
with the VX-5, it is freeware and is available for download from the web.

I'm looking for a DualBand HT or mobile. Late model.

I have to trade or partial trade the items below. What do you have.

ICOM IC 28H 2 meter mobile 45 watts

6 meter RINGO antenna (Cushcraft AR-6)

2 220mhz RINGO RANGERS (Cushcraft ARX-220)

Hy-Gain UHF yagi Model 7031 DX 420-440mhz 31 Element
on 24 foot boom. Rated at 17.6 Dbd gain at 432.1 mhz

MFJ 948 Versa-Tuner II 160-10 meter antenna tuner. Cross
needle SWR/WATT meter

Relisys 3500 Digital camera 680 X 480

Mirage 2 meter Linear amp. Model 215 1-2 watts in 120-140 watts
out. All mode with pre-amp. (need repair)

6 meter all mode homebrew amp. 28 volt (no ps) Uses 4 (four)
motorola MRF 175GV power devices. (Each device rated at 250 watts
output up to 250 mhz) (unit need repair)

Swan Model WM 1500 HF Watt meter 160-6 meters.
5,50.500,1500 watts full scale.

Diamond SX- 400 VHF-UHF 140-500 mhz Watt meter.
5,20,200 watt scales.

M squared Antenna combiner (for stacking 2 2 meter antennas
1 50 ohm input- 2 50 ohm output. With "N" connectors

2- 80 foot lengths of 9913 super flex coax. One end with "N"
connector. One end with PL 259 connector.

Comet duplexer Model CF 360 600 watt pep rating.
1.8 -30mhz / 49-470 mhz

Source record: 99348

I downloaded the software from the Ten Tec Site (Free) and it looks real nice.
Another thing that is nice is Ten Tec's
30 days return policy. If you don't like the radio for any reason you return it
in the same condition as you recieved (you pay shipping both ways and they
refund your money. How can you go wrong?. If you buy a Japanese radio at a USA
Ham store you can't return it unless it dies in 8-10 days and then it is still
at the discretion of the ham store plus they charge you a restocking fee and
usually give you a hassle. IT is sort of like "YOU BOUGHT T >>NOW YOU ARE STUCK
WITH IT". If there is a problem after 8-10 days you have to deal with the
manufacturer distributer who will play hot potato and you send the radio back
and forth till the problem is resolved. I hope this radio is as good as
I think it is. QST will be doing a review in the next few months so I will
beinterested how the radio stacks up against other $895
radios. You have to remember the DSP is in the IF ..not AF stage and there are
no extras Crystal/Mechanical filters so the total price is very low. I am not
sure if I will get the Optional tuning Knob freq entry keypad..the price is
right .

Go to the HRO and AES web page . They are the few Dealers who have any return privlages. Most Dealers tell you to deal with the manufacturer and theat is what a Warranty is for. HRO has the Return stuff written on thier WEB PAGE. It says HRO /
AES may give a refund in 10 days AT THE DISCRETION OF HRO (does that mean they don't have to give a refund?) for returned radios plus they MAY charge a Restocking Fee. HMmm Ten Tec gives you 30 DAYS (NO QUESTIONS asked, NO RESTOCKING FEE). Againg I have nothing against HRO or AES since they are the FEW HAM DEALERS who have any return privelages. Read most Ham Dealers web page and they offer NO return . They say soemthing like " We don't sell radios for evaluation and you should fight it out with the Manufacturer.

Source record: 99350

Just like all HamsI am cheap and have delt with the Poor quality of MFJ stuff .

I found that if you want to try a MFJ product and don't want a lemon you are better off buying direct form MFJ and paying a a bit more than from the Local Ham Dealer. MFJ gives you 30 days return policy and they do give refunds but it takes
30 more days (slow). MFJ Quality control is poor so manytimes they don't test or calibrate the stuff. It has happened to me many times and I am cheap and accept the risk. OFten You have to troubleshoot the device youself and that is why the 30 days return privelage is best.

You're getting closer, anyway - they were made by MIZUHO in Japan
(Mizuho is still in business, but not so many products now), sold
by AEA with a private label, and probably distributed by Henry. The
model you're talking about has a MIZUHO model number if MX-28S
(there are numerous other Mizuho SSB/CW Hand-held rigs, but that's the
common one).

Hmmm I may have been confused with the locked band vs the cross-band operatiosn as described in page 81 of the TM-V7A mamual. No I don't have one yet but it looks like a nice radio... The descriptions are hard to follow. I guess I should have read it closer. Still I see a lot (most) radios that will only do VHF to UHF in crossband.

Wanted:

Yaesu FT-23R and/or FT-73R
working condition, can be without battery case or antenna.
CTCSS board is a big plus.

Trade to computer equipment (HDD, PCI/ISA/AGP cards etc) or money.

Mail me.

That is a real good question. I hate to think that our communications
reliablility is dependent on Bill Gates' software.

And check anything you buy *new* from them for scratches and misuse. Just where do you think those returned things go? I got a new SWR analyzer home from the local HRO store before I discovered the scratches. It worked ok so I said what the hell and kept it. It was going to have more scratches on it soon anyway...

Greetings,

The Drake TR270 will inband repeat and also can be set as a repeater. You have to use two (2) antennas or a set of cans. I have set my rig up as a repeater with two antennas and it worked fine. If you do not have the two antennas far enough a part it will not work properly. I had mine approx. 50 feet a part. Of course if you used a duplexer, (cans) you would not need to worry about that. 73, Stuart

5418. Coaxial Capacitor

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-03 00:00:00 UTC
From: Stephen Mitchell <smitche1@san.rr.com>
Message-ID: <T0Zz3.5441$iy.125076@newsr1.san.rr.com>
Source record: 99382

Greetings all,

I live here in San Diego and as some of you may know, I'm in the process of eliminating some obnoxious fuel pump noise from my HF radio. I'm trying to find a coaxial capacitor to install on the positive lead of the fuel pump. I've tried HRO (pretty much knowing that they wouldn't have one but might know where to get one) and they referred me to Gateway Electronics here in San Diego but they don't have any. In fact when I asked about one they looked at me like I didn't know what I was talking about. Anyone have any ideas?

Thanks,
Steve, N6TGK

5429. Re: 2m rig in Dodge Ram Truck, Where?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-03 00:00:00 UTC
From: k4krh@bellsouth.net
Message-ID: <37cf0fac.475983@news.rdu.bellsouth.net>
Source record: 99423

I mounted my dual band Alinco on a 1/4 " board the width of the radia
and watt/swr meter by the length from the seat down to the floorborad
where it meets the dash, then mount the radio and meter with velcro.
If it need to carry 3 in the front I can not use the radio (have to
take up), but I have the quad cab so I put 3 in the back and me & 1
other in the front. I rest my arm on the center console and the radio
is right at my finger tips to operate. I have a digital camera, can
send U some poto's if you wana see

I put mine at the bottom of the dash below the ashtray.There 2 screws already there holding the 2 sections of dash in place.I used the two screws to mount my bracket.It works great I've have a 45 watt alinco.
Hope that helps .If you have any questions let know.

I'm the original owner and used it only a few times; still has
macturer's protective clear plastic film on lens, so no scratches! Works
great, too! Small, lightweight GPS weighs only 9 ounces. Features
include - large backlit LCD display, easy to read characters and graphic
plotting. TrackBack feature lets you navigate your track log back home
without manually storing waypoints. Resettable trip odometer keeps track
of distance travelled. User-selectable navigation screens for Compass or
Graphic Highway Steering guidance. Dry nitrogen filled case for water
resistance. Over 100 map datums, 250 waypoints, 20 reversible routes,
optional computer cable, up to 20 hour battery life. Comes with wrist
strap, user's manual, and quick reference card. This GPS receiver has a
newer updated operating system that does not have the Y2K-related EOW
problem that many other GPSs are currently experiencing (check on this
before buying any GPS!!) Please add $3.50 for shipping within U.S.
International shipping is more. Personal checks will be held 7 days to
clear.

From: Shadow <shadow@home.com>
Message-ID: <28Hz3.102$gS2.46@news.rdc1.ct.home.com>
Source record: 99434

Well, I have had this radio for seven days now. I have never received such glowing reports for any new radio I have tried, nor has interest ever been this great. The transceiver worked first thing, right out of the box. The software (Win 3.11, 95 or 98) installed perfectly and I was off and running. Easy to use is easy to say - but in this case it is true.
Receiver - plenty of bandwidths to select, IF DSP for noise (very effective, i.e. on 75 meters at night). Auto notch, a very effective passband tuning scheme, plus audio in to the computer (I am using a very old TI Extensa 75 MHz laptop) so you can record or process it further. It is as selective and sensitive as my 990.
Transmitter - considering all the bandwidths available, geesh. I have been getting wonderful audio reports with an old RS electret mike and an Astatic (not D104) base mike. Really - some of the toughest critics on the East Coast have given glowing reports.
Upgrades - flash bios, so no new chips to install plus the inevitable software enhancements to come will all be done via TenTec's web page: http://www.tentec.com/Amateur.htm

All in all - for $895 this thing blows the socks off the competition, virtual or "real" radios. You will not be disappointed with this radio.
Dave Ward, WA1RD wa1rd@home.com

5442. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-03 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7qnit8dot1@news.hawaii.edu>
Source record: 99436
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

One question I had...

If you're operating, and the PC crashes, what happens? Can you still operate as long as you don't try to QSY? Does the receiver keep running but you can't get into transmit? Or does it go totally dead?

>turnaround time from Yaesu. The comments are :" my radio does in 3 weeks
how
>about yours. What parts did they replace? Do they know why all the Ft-100
are
>dying. Is it a lemon??

I'm not sure where you've been reading, but it surely is not the onelist. The serial number listing that was being circulated indicated that the vast majority had no problems at all.
As to your other comments, I have read every message on the ft100 - onelist, and have never seen a posting that suggests that all the ft-100 are dieing, or any of the other drivel you suggest here.
As to most of the guys on onelist having their finals go bad, that too is entirely incorrect. I have asked you before to cite your sources of information, and you have never done so. "Dealers in the UK" is not a source, other than perhaps a source of misguided rumour. The comments you ascribe to the folks on onelist have never occured. In light of the obvious fact that what you are posting is misinformation, I must question as to why you continue to post it?
As to my ft-100, I've had it since March or April, used it both mobile and base, and have been very happy with it- a fantastic combination with the atas-100. Recently made extensive use of it on a 2600 mile road trip, and had a blast. I hope others are as happy with their radios, whether they be yaesu, Icom, kenwood, or what have you, as I am.
Happy hamming!

Source record: 99241

I have read your posts on this matter from day one, and it seems that you do not understand the postings, and do not make note of who is posting. 3 postings about a defect does not mean 3 radios defective, if all three postings are from the same person.
As to the serial number listing, you have refered to it many times, and clearly do not understand it. The listing of numbers is that given by all the people who have advised the original poster of the serial number of their rig. Only the few that have a notation to the right have had problems.
What radio do you use? and what is your call sign?
William (VE7WJM)

5450. ADI vendors w/ good return policy

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-04 00:00:00 UTC
From: kamst39@pitt.edu
Message-ID: <37d2448f.102795194@news.sgi.net>
Source record: 99244
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner

I've been looking at purchasing an ADI PR-52 6 meter handheld rig and I'm interested in finding a mail order company that has a decent return policy. I think its particularly hard to know before you buy that what you are getting is of decent quality and that you are going to like it. You can see pictures in mail order catalogs, or on websites, and read emails and usenet posts about it -- but for me it requires holding it in my hand, playing with the controls, and what not before deciding whether it's worth the hard-earned couple hundred dollars the equipment costs.

I don't have any local dealers of ADI, that I know of.
The mail order companies I usually deal with have terrible "no-return" policies on new equipment - which, despite understanding their situation - doesn't make me a happy shopper.

The company I work for has a 45-day money back guarantee on ALL products, despite the fact the manufacturers may or may not reimburse us for the loss. The idea is that you only carry GOOD QUALITY products, so the amount of people returning items is relatively low. And, even in the event someone might take advantage of the situation, you still WIN because you have 99% happy customers, and thats a good thing, especially for repeat business.

The reason for my message is this. Does anyone know of a reputable ham radio mail order company that sells ADI products (http://www.adi-radio.com) that stands behind their products with some sort of money-back guarantee? Or perhaps one that assesses a 15% fee on returned new merchandise?

Thanks,

Keith

5456. ALL MODE 10M HT!! A REALITY? OR NOT

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-04 00:00:00 UTC
From: breda@hom.net
Message-ID: <37D126E3.5E5298C3@hom.net>
Source record: 99250
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.shortwave,rec.ham-radio.swap

I recently saw a 10m, all mode HT. on copper electronics website.
Has any one ever used or seen one of these. If so please comment
good or bad. It is refered to as a EAGLE SPITFIRE 454. AM/FM/SSB
28-29.699MHZ. but supposedly modifiable to 26-29.699Mhz.

If its an OK radio, I might cosnider buying one,

If its OK but made in CHINA, They can keep it.

Please reply to breda@hom.net so I don't have to review
all RADIO news groups.

Thanks in advance.

What when I can buy an 847 for 1000 USD and get all that plus 6m and HF
and hi power on all bands in a radio 15 years younger!

Come on get real!

Its probably worth 400 USD tops!

Your right, as a second thought you should go back and look at the number of posts where people have had problems with that rig you'll find the number is VERY low.

Hi Mike:

I'd be interested in the details, for example what was the supply voltage and what was it? Battery? Power Supply? Was anything plugged into the rig at the time like a keyer? Any connection to the ALC circuit? Also go easy on HRO their hands are tied.

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling 1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped) for 1 to 10 issues. If you are interested in over 10 issues or the entire collection, make me an offer. I am willing to ship anywhere on this planet so long as you are willing to pay the actual shipping costs.

Here are the issues that I have:

QST

1992 Jan - April $1.00 ea.
1993 Jan - Feb & April - Dec $1.00 ea.
1994 Jan - Oct & Dec $1.00 ea.
1995 Jan - Dec $1.00 ea.
1996 Jan - Dec $1.00 ea.
1997 Jan - Dec $1.00 ea.
1998 Jan - Dec $1.00 ea.
1999 Jan - Current $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.
If you would like to check my references, please feel free to do so. I am on Ebay and my user ID is: Andrew45
http://cgi2.ebay.com/aw-cgi/eBayISAPI.dll?ViewFeedback&userid=andrew45

That is not true at all. Just because I don't like a Ford Explorer
doesn't mean they are bad SUV's. Just because I don't like Pizza
Hut's pizza doesn't mean their pizza is bad. It comes down to
PERSONAL preference -- which differs from person to person. I'm not
worrying about the __quality__ of the radio -- I'm worried about
whether it or not it feels right in my hand or if it can be operated
one handed, or whatever little criteria I might add to decide whether
or not * I * like the radio. Opinions differ from person to person
and I'm sure there are some people who like their Standard's better
than their Alinco's, or their no-name-brand better than their Icom's.
This doesn't mean one is better than the other, it means that EACH
PERSON HAS THEIR OWN PERSONAL PREFERENCE, and trying to determine
whether or not a radio meets your criteria online or through a
magazine is sometimes difficult.

By the way, I own a variety of radios including kenwoods, alincos,
yaesu's, etc.

Keith

5466. Wideband frequency source

Hi,

I'm involved in some research as a consultant for my friend's work at university. We do examine and evaluate wideband voltage controlled oscillators (recent and future). Frequency coverage needed: .01-3GHz.

Would you please inform me about possibilities where to obtain functional diagrams and/or schematics of some wide coverage receivers/scanners? Required transfer of data: e-mail, ftp, http... Since we've no time reserved for direct communication with vendors now.

Any response appreciated.

Please, excuse indirect content of this message. Thanx in advance!

5471. ADI 201 PL question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-04 00:00:00 UTC
From: jh2658geocities@my-deja.com
Message-ID: <7qs925tit1@nnrp1.deja.com>
Source record: 99265

Hi,

This message is intended for those who have
programmed a ADI 201 HT.

My local repeater uses a 100.0 HZ PL tone. I
have programmed the repeater frequency, including
offset. I press FUNC+F4 twice such that T and SQ
are displayed. Yet I can't activate the repeater
when transmitting.

Pressing FUNC+0 and then 4 reveals that 100.0 is
set correctly.

Any help would be appreicated!

You can run two antennas without a duplexer IF the rptr is shielded and
GOOD 100% shield coax or hardline is used (NO RADIO SHACK RG8 here!)

For a 1 Mhz split or wider on 6, a 60 to 100ft vertical sep between
antennas will do....you MAY get away with less (like 40-60 ft) if the
power is less than 100watts and the radio does not have a preamp in
front of the rcvr...you MAY use one or two cavities to help that...

Hello everybody,

I appreciate all the advise I've gotten from people in regards to the noise I'm experiencing on my HF radio caused by the fuel pump. For those that may not have seen any of the previous posts, I'll re-cap what I've tried so far.

After determining that the noise was indeed from the fuel pump and that it was definately entering through the antenna I had Ford install their RFI filter on the fuel pump, which didn't eliminate the noise, only to have the fuel pump fail after a month of having the filter installed. My service advisor told me that the failure was caused by the filter. However, when I spoke to the Service Manager he told me that they don't know if the pump failure was caused by the filter. However, the filter was removed since it didn't appear to do anything anyway. Against the Service Manager's recommendations I decided I would try shortening the negative lead of the fuel pump and attach it to the frame as close to the pump as possible. I also wanted to install a coaxial or feedthrough capacitor on the positive lead. Once I got the truck bed off my friends and I discovered that what we though would be maybe three wires turned out to be seven. Three of the wires we were able to determine go to the fuel sensor/gauge. Out of the four remaining wires (red w/black stripe, orange w/black stripe, yellow w/white stripe and solid black) we found that the red/black wire had 7V on it when the key was in the on position and the yellow/white wire had 12V. When the orange/black wire was tested against the frame of the truck we got a reading of 7 ohms and the solid black wire read 0 ohms. With that we decided that the solid black wire was probably the actual ground wire so we attached that to the frame next to the pump. This did nothing to decrease the noise nor did installing a 4 uF cap across the 12V wire and ground. I still want to try a feedthrough/coaxial cap but so far I have no idea where to get one... I thought maybe an auto parts store since the caps are installed on alternators but no luck.

Anyway, I'm going to try a few more places for this cap but at this point, if I'm unable to eliminate the noise, I'm thinking about getting rid of the HF radio (brand new FT-100). Not that the radio is bad but because the truck just radiates too much noise to use it on HF.

Hopefully I'll be able to get rid of this noise. Stay tuned...

I have the Alinco DX70TH and had it on for more than a month (24/7), using a Astron 35amp power supply. Mostly on, not transmitting, except when the 6 meter band opened. No problems to report so far.

Radios are like another electronic product. Take for instance, you buy a computer and the hard drive fails. That's not a normal problem but it can happen. Does that mean the computer is a piece of junk? No, it just means that some products make it through the Quality Assurance Dept. that shouldn't have been sent to the store shelves. It's all a law of averages, sometimes they can get stacked in the wrong direction.

There are so many variables to this electronic wizardry, I can't even begin to start thinking of them.

Final thought, so far the Alinco Radio has worked fine for me. I'll definitely post something if I do have a problem so others can benefit from the information.

Hi!

I've been gathering information about how to build an radio modem,
(high baud rate, but only 10 to 20 meters) and
one of the ideas is to use an TV tunner as front end.
UV1336 from Philips seems excelent: PLL and I2C, wide band
coverage, etc.

Do you know where to find the datasheet???
(a couple of years ago I found it on the Philips Components site, but
nowadays it's no longer there!)

Thank you!!

Here is a good one. A guy purchased a MFJ 1789 TNC and found most of the functions didn't work at all but it did light up. He used his business card as a bookmark while reading the operating manual and accidently left it in the manual.
He returned the TNC as defective and got his $ back less restocking fee.About 10 days later he gets a call from a Guy who purchased the same TNC from HRO and found his business card in the manual.
The new owner also found the TNC lite up but didn't work. They compared serial # to see if it was the same Unit and it was.
It appears that HRo resold the defective unit as NEW after charging the first owner
a restocking fee of 15 %. If it were not for the business card they the new owner would have thought it was new and defective. HRO said that it is against their policy to see a used or returned unit as new. In my opinion their policy is NOT TO GET CAUGHT.l

I disagree on the 10 % profit margin.
I have various mutual funds and all bring me 15 % to 22 % returns. Why would the owner of HRO put his hard work into making 10 % when he could be making 15 % to 22 % return on his $ 7 Million of inventory you always see on his web site. My $ is in a 401 K and i don't pay taxes till I get it out at age 65 UP.

I just got my "Radio Shack 2000 Answers Catalog" and noted the 10m transceiver.

What do you think of this radio? Any good? Any problems? The price sure seems good. I would appreciate your comments.

Here's what the catalog says:

QUOTE:
Radio Shack 2000 Answers Catalog, Page 76
NEW 10-meter DX is hot! Get in on the action and work the world with this 25-watt mobile/base SSB transceiver - under $150
HTX-10. With this 25-watt rig and a modest antenna such as a dipole, vertical or mobile whip, you can communicate world wide. (See page 88 for antennas.) This is a lot of radio for its small price - a great incentive for no-code Tech Class Hams to upgrade to Tech Plus.* Features include rotary tuning in selectable 1, 10, or 100 kHz steps, up/down tuning from the mic, 5 easy-to-set memory presets and an effective noise blanker. You also get selectable USB/LSB modes, plus AM and full 25-watt FM operation with repeater offsets for General Class and higher hams. Tunes entire 28-29.669 MHz 10-meter band. 2 1/16 x 6 1/16 x 7 5/8 inches. Includes mobile mounting bracket and DC cord. Requires 13.8 VDC at up to 5 amps. 19-1110.....$149.99
Requires Novice, Technician-Plus Class or higher FCC Amateur Radio License. *If you currently have your no-code Tech license, just pass the 5 WPM code test to work the world with this radio.
END QUOTE.

Dear Readers,

I would like some information on the Automatic Numbering Information (ANI) system. Why is it used? How does it work? Where is it used? Pros/cons to using this system? Please assume I have no knowledge of subject and go from there. What equipment manufacturers? Brands/models/web sites? Thanks for your help with this info.

Cheers and 73,

Norm Beasley, P29NB/KO4CB

Norm,

The ANI system that installed and maintained for several years was made
by Selectone. Consisted of a small circuit board that is mounted inside the
radio. Depending on setup, the board can send out a series of DTMF codes
before or after a transmission to ID the radio. Of course, this is intended
to be used on conventional systems and not Trunked systems.

One of the pros is that you know which radio is keying up(i.e. you have a
prankster or someone who likes to cause malicious interference).

Cons are annoying dtmf on the channel constantly, and higher maintainance
costs on the radios. However...
Most newer radios such Motorola, will do some sort of ANI without an add-on
board.

You can checkout www.selectone.com for more info.

5521. What is it? (maybe the old timers know !)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-04 00:00:00 UTC
From: Al & Lo <alxlo@valinet.com>
Message-ID: <37D11AC8.2452BCAF@valinet.com>
Source record: 99327
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.amateur.misc

I was given an old military communication "something" The printed Metal
tag on it reads - TS-12/AP (unit 1) .
It has 3 so-239 Connectors on it labeled input 1, input 2 and meter
input.
It has 3 pots on it labeled input 1, input 2 and master gain.
It has a meter labeled standing wave voltage ratio.
It has a power switch (on - off), a meter switch (amp - ext), a
switch labeled (Bol - xtal) and an input switch (no.1 - no. 2)
It is 115 ac powered
It has a schematic in the lid that has a confidental stamp on it,
crossed out, and another stamp which reads:
Classifacation Cancelled
Auth: janap 140(a) dtd nov48
Date: 2 apr 53
By (signature)
P.U.S.O

It has 5 tubes, all RCA, as follows: 6SJ7, 6SJ7, 6V6GT, 6H6, and a 6X5GT

The first 6SJ7 appears to be shock isolated on a mount with the words
"Presto Recording Corp. New York, U.S.A." cast into the aluminum.
It has four masive caps in it labeled; T6080 NGP 8 MFD 600VDC and
other assorted smaller caps and resistors
I can scan in the Schematic and email it if nessesary to ID it.
With all input and no output my theory is that it is an antenna tuner,
tester, or matcher
Anybody know ?
Thanks in advance, Al

I have forsale a Yaesu FT-90 2m/70cm dualband mobile with YSK-90 seperation kit.
Two months old and I refuse to use the term "mint". The radio is as NEW and not a scratch on it.
Was mobile for three days on a short trip plugged into my existing FT7400 power cable.
Original cable unused and uncut.
Warranty card is unused so you get full warranty.

Reason for selling: I guess I am used to my larger FT-7400 radio. Going to buy an Icom IC-207. The FT-90 is just too small for me.

I am asking $400 for the package and I ship. Terms are USPS money order in advance.

Email dan@truvalue.com if interested.

I agree. The glare on the plastic over the display is appalling. And
if you think the standard battery is large, try the 1100mAh FNB-42
battery. It is even larger.

However, beyond these minor complaints, I am totally satisfied with
this radio. In fact, I recently purchased a second one for my wife to use.

How could a filter cause pump failure? I'd get a second opinion on that
one.. More than likely, it wasn't installed properly in the first
place. I'd try a different dealer..

Why a coax or feedthrough capacitor? Why not use a filter built from
a series inductor and a couple ceramic caps. You just have to know
how much current the fuel pump draws and pick or build the inductor
accordingly.

Tansformers for sale:

UTC S-62 filament transformer 10V CT at 5 Amps (M) $12.00

Heater transformer 5V at 3Amps (S) $11.00

See below for 6.3V transformers!

= = = = =

Audio driver transformers etc.:

Sescomm 3 Watts 15 k-ohm input, 30 k-ohm C.T. output (S) $14.50

3 Watts 190 ohms input / 8 ohms output (S) $12.00

+18 dBm 600 ohm input / 600 ohm at 75 mA C.T. output (S) $12.00

UTC 11282 10 Watts 20 ohms input / 4, 8, 16 ohm outputs (S) $21.00

= = = = =

Isolation transformer 120V to 120V AC at 2A (240 Watts) (M) $19.00

= = = = =

Isolation transformers:

120V 3 Watts - $ 3.00 (flying leads, open frame style)
120V 50 Watts - $25.00 Open frame
120V 150 Watts - $35.00 Open frame - solder terminals
120V 180 Watts - $40.00 In case, with 2 outlets
120V 250 Watts - $50.00 (New Stancor P-6161, NICE! looks
like 500 Watt size!)
(With AC power cords built-in)
120V 500 Watts - $85.00 Open frame
120V 1000 Watts - $105.00 Open frame

120V 200 Watts - $19.00 (flying leads, open frame style)

Other sizes and styles available. Inquire!

= = = = =

Step-up transformers:

Magnetron brand new power transformer:
115V AC 60 Hz in, and 208/240V AC out at 3 Amps

Also has a 24V AC at 1 Amp secondary also $79.00

Power xfmr:
120V AC in / 220V AC at 1.2 A (250 Watts) Out $45.00

120V AC pri / 200V CT AC at 2A (S) $25.00

= = = = =

120V AC in, 18V at 2 Amps out $8.00
Open frame. (M)

120V AC primary, 24 Volts AC at 24 AMPS(!) secondary (S)
$100.00

120/240V AC primary, 12V at 12 Amps, or 24V CT at 8 Amps (S)
$47.00

120V AC primary, 28V at 16A secondary (S) $55.00

= = = = =

Serious filament transformers:
(Most of these are potted)

120V Primary / 6V AC at 166 Amps! (S) $90.00

120V Primary / 9V AC at 111 Amps! (S) $90.00

115V / 230V AC Primary, 7.5V 51A Sec Approx size:
4.5" X 4.5" X 4.5" tall (S) (S) $60.00

115V AC Primary / 7.5V at 46 Amps (S) $80.00
(QTY 3)

115V AC Primary, 6.3V at 31 Amps sec. Approx size:
4.5" X 3.5" X 4.5" tall (S) $32.00

120 V AC primary, 12.8 V at 25 Amps OR 2 X 6.4 V at 25 Amps
Approx. size: 5" X 4" X 4" tall $39.00

120V AC primary, 6.3V at 40 Amps. Approx. size:
3.7" X 4.2" X 5.7" tall (S) $40.00

120V AC primary, Two sec. each 6.3V CT at 10 Amps
Approx. size: 3" X 3.5" X 5" tall (S) $28.00

120V AC primary, 6V or 6.5V or 7.0V AC (taps) at 13 Amps
Approx. size: 3" X 3.2" X 4.2" tall (S) $29.00

120 or 220 V AC primary, 6V at 36 Amps (open frame)
Approx. size: 4" X 4.2" X 3.7" tall (S) $36.00

115V AC Pri., 2V at 30A or 4V at 50A sec. potted (S) $36.00

= = = = =

Plate Transformers:

All 120V AC primary

68V @ 4A $30.00

75V @ 30mA, 6.3V @ 5.6A (Hallicrafter) $15.00

85V @ 500 mA $16.00

280V @ 500 mA $26.00

400V CT 100 mA, 6.3V 15A and 6.3V 8A $25.00

410V @ 315 mA, 220V @ 150 mA, 6.3V @ 12A $29.00

440V @ 110mA (New) $17.50

510V CT @ 85 mA, 6.3V @ 2.5A $18.00

560V ct AT 85 Ma, 6.3v ct at 2.5A $19.00

> Anybody know ?

From NAVSHIPS 900,105: "TS-12/AP is a standing wave indicator designed for measuring or checking the standing wave ratios of plumbing, TR and RT boxes, crystal mixers, and antennas of various radar equipment. It is also used in conjunction with TS-13/AP (signal generator) for extensive testing. [It] consists of a slotted section, probe and fittings, amplifier and meter, cables, tools, and assorted screws..." Unit 2 consists of the probe and accessories.

From: W4UDX <W4UDX@juno.com>
Message-ID: <37D2819E.1808D4C5@juno.com>
Source record: 99173

For Sale: NON-working Yaesu FTV-107R transverter w/2M module. Includes
ACC cable and photocopy manual. In only fair condition. I recently bought
this unit from a ham in Florida for $150 who descibed it to me as in good
condition and supposedly working. Truth is I got burned on the deal. I won't
mention his name, but his call is something like N#PBC. (Be careful when dealing
with this guy.)
Anyway, the transverter is for sale at best offer. Or would trade even for a Ten-Tec
2M transverter. Let me know if you are interested as I will probably sell it reasonably
cheap. It receives OK, transmits when first powered-up, but then becomes very
intermittent. Will definately need some kind of work. Maybe the relays need replaced....

Email to... W4UDX@juno.com

Mark W4UDX

5570. Re: Help ICOM 738

Newsgroup: rec.radio.amateur.equipment

Message-ID: <37D2AB45.4BB4@ix.netcom.com>
Source record: 99174

Oris this is very common sound for these Icoms. If you want better audio contact Inrad and order a 3Kc filter. This will make a huge difference. Also try using an EQ and a good mic. These are the first two things every audio concerned ham would do to any rig. About the freq change, adjust the two varicaps next to the PLL, also very common on all older Icoms. 73 Chris

Drake TR-7 transceiver, PS-7 power supply, MS-7 speaker, FA-7 cooling fan, Drake desk microphone (7077?), AUX-7 board, two TR-7 owner's manuals, one TR-7 service manual in Drake binder (not copies). I am posting this for another ham who is not sure of other options in the radio but it appears to have a wide filter for AM in addition to the SSB filter but no CW filter, no noise blanker (the "NB" button does nothing). Condition: the radio receives, and transmits ok and appears to transmit on any receive frequency. There are scratches on the cabinets and the aluminum bright work on the top front of the TR-7 and PS-7. The front panels look good. He is asking $600 for the lot and it will NOT be separated. Shipping is not an option...come buy and pickup in the Detroit Mich area. Or, I may be bring this stuff to the Findlay Ohio swap.

Just enjoy it!

It's a great HT. I use mine daily. I like the Maha MH-C777 universal charger/conditioner and FNB-47 NiMH packs for the FT-50.

I also like its computer programmability - just last week I needed to set it up for a trip to Phoenix (from Riverside, CA). I already had that set of frequencies programmed in ADMS software. Took a whole minute or so to re-program the FT-50 for the trip.

I don't know if you're asking too much of a company or not, Keith.

Suppose you bought a new automobile. Plunked down the cash, and drove it off the lot.

But two weeks later, you decide it doesn't quite fit your needs. You want to return it with no questions asked and no "restocking" fee.

Let's get back to the HT. There are published reviews of that ADI product. There are user groups that discuss its merits. There are amateur radio clubs in your area - and surely someone there has one of these units! There is a lot of research material you can discover on your own...before purchasing.

But you want to be able to "test drive" a HT, but be able to return it in a couple of weeks...

I don't believe you can expect to "have it" both ways: rock-bottom mail order prices, and the most liberal of return policies. Firms like HRO and AES are working on very slim margins on HTs. You are asking that they ship you a brand new unit, but accept a return in a couple of weeks and demand a full refund. They cannot sell the unit as "new" ever again.

Maybe I am just spolied by having a Ham Radio Outlet only thirty minutes away from me...but I sure would perform research before purchasing any radio...and I wouldn't think of asking my dealer for a refund because I didn't do my own homework beforehand.

From: "Tom V." <TVAC@postoffice.worldnet.att.net>
Message-ID: <37D29945.38AA@postoffice.worldnet.att.net>
Source record: 99182

Hello,
I recently purchased a new SS-30M (switching). It is my first Astron product and purchased from a hamfest dealer, so have some hopefully minor questions about it.
I've noticed that output is about 14.3VDC, is there a way to adjust this down to 13.8, or does it matter? Also, my unit did not come with an owners manual, did they leave something out? It came with what looked more like a product brochure, listing all models and specs... Finally, does anyone have a schematic that they wouldn't mind providing?
Thanks!
Tom WA2CRG

I haven't been active for almost 20 years. I see a lot of gear for sale, but I'm afraid I've been out of the loop for too long. Is there a place (on-line) that describes the various rigs up for sale? My son is interested in getting his ticket, and I'd like to pick up a good used starter rig. How do I compare the TS-530 and 630 with an IC-735? Is there a listing somewhere describing the various rigs? I appreciate any help anyone can offer.
73's
Ken

I looked at both the FT-50, and FT-51. They are both good radios with numerous features (which most people never use). I made the choice to buy the FT-51 as the FT-50 wont Crossband Repeat, a feature I use frequently.

I have friends that have the FT-50, and they are happy with the radio.

Does anyone have a manual for a KDK FM-2030 two meter transceiver?

Or does anyone know where there is one on the web that can be
downloaded?

Thanks.

Ken, W8EK

Hi Ken -- welcome back to Ham Radio. For older rigs -- try browsing the
Boatanchors at URL:
http://www.ac6v.com/pagex.html#HR
May come up with some photos at least.

Also you might want to add a Kenwood TS-830S to your list. I owned a
TS-520, TS-820 and the TS-830S was the best of the lot. Has vacuum tube
finals and a driver -- otherwise solid state. Super sensitivity and
selectivity and has that kenwood Hi-Fi transmit sound.

Hi Ken
Sorry no on your questions -- but the manual vendors on-line may have
it. See URL:
http://www.ac6v.com/pageaae.html

No affiliation here -- just ham help intentions

I had my FT-2500 mounted on a pedestal. My truck is a 96. I now have an FT-8100. The control head is mounted to the bottom section below the ashtray. Rig is under the drivers seat. I plan to add an IC-706. That will go there also. The plastic is very strong there. By the time I get rid of this truck it won't matter if there's a hole in the dash. I bought it to use it.

I'm looking for a winter project. I want a broken, burnt, lighting hit,
console type HF amp, (ie. Henry, BTI, Collins, etc.)
I don't much care what it looks like, (it can be very ruff), all I want
is a good cabinet, and an RF tank, that can handle 2KW+ output, and it's
got to be cheap!
Slightly above scrap price is more like it. Since are unlikley to sell
it for much more anywhere, without lots of fixin.
send a message to,

Can be ordered for $15 from: http://www.w7fg.com/

I bought one for my KDK FM-2033 I got at the Dallas hamfest for $20 (broken)
was able to fix it with the schematic. Kinda bugged me that I paid almost
as much for the manual as i did the radio, but added up, still a good deal.

cheers

Okay... thanks for all the input.

After much thought and the advise of many of you, I'm going to consult another dealer about the TSB. I, as some of the rest of you, question the installation of the filter since it didn't work and then caused the failure of the fuel pump a month later.

If it doesn't work then I'll just use the FT-100 on VHF/UHF until I can get the money together to purchase an FT-8100 and put that in the truck and then save the FT-100 for when I get into a house within the next several months.

I hav a Ts-850s from Kenwood, it have worked fine for about 8 years now.
However lately it have benn making som trouble.
When the rig is warm (not overheaded) it drops the outpower from about 100w to 0 after about 0.5 sec. and after 2 sec. the
Power is up again. When this happens the alc meter jumps up.
I have seen this in CW, AM, FM and FSK mode.
I have tested this with both antenna and a dummyload and there
is no differense.....
When I have keydown the cycle repeats for ever 10 sec.
Is there anybody have seen this before or have sugguestions
where to start looking?

Regards
Asle Fonn

Wow! Thanks for pointing that out.

I want to contact them and make sure it is the same model and other
limitations etc. Perhpas I paid too much for mine...

Here's what I found out.:

Company MCM Electronics
Listing ID 3393
Phone 800 543-4330; 513 434-0031
Fax 513 434-6959
Mail MCM Electronics, 650 Congress Park Dr, Centerville, OH 45459-4072
USA

Do you know if they have a web site?

I will withdraw the offer for sale on my VARIAC since it is apparently
not worth the price I came up with.

Thanks again - E.T.

If you subscribe to QST, I believe you can look up the various reviews
of rigs they've done over the years, just by going to their web site
and doing a search for the desired rig.

Look at the ARRL site, http://www.arrl.com/ and subscribe to QST
there, and then you can both get the magazine and look up past rig
reviews online.

They're also selling all the back issues of QST in CD-ROM form, but
that may be a bit more expensive...

Bob
n5ahy

(By the way, I have an Icom 735 -- it has a very hot receiver and
works quite well -- a good, used one would be an excellent rig.
They're selling in the $450-$500 range, used.)

Source record: 99215

I have acquired an H.White & Co morse key dated 1918. It's a very intricate thing made almost entirely of brass with a send/receive switch next to the standard brass pounder type lever. At the far end of the lever from the fist end is a double pole set of contacts operated by the send receive switch and the contacts that the key lever hits are duplicated, i.e. there are two contacts for key up and two contacts for key down. All in all the thing is quite intricate which is what drew me to it. All this gubbins is enclosed in a brass circle which looks like it had a cover over it - I am told glass.

Someone has suggested that it's a naval key but do you know anything about them and if this is so?

5615. SALIOR MARINE RADIO GEAR FOR SALE

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-05 00:00:00 UTC
From: Frank Davis <fdavis@nf.sympatico.ca>
Message-ID: <37D2DB0C.6AF532BE@nf.sympatico.ca>
Source record: 99219

List of the Sailor equipmen for sale:
* R1119 receiver, serial #297618
* S1300 Exciter, serial #238867
* T1127/H1200 Amplifier with remote control, serial #'s
287239 (amp), 239340 (remote)
* N1401 Power supply, serial #296016 . We have a complete
set of manuals. Copies of originals. Units seem to be
working OK. Asking $2500US + shipping

Please reply direct to:

vo1hp@rac.ca

SPECS:
* estimated weight:
H1200 - 4.5 kg
S1300 - 12.7 kg
R1900 - 7.7 kg
N1401 - 29.5 kg
19" rack for above is 43 kg
T1127 - 20 kg
19" rack for above is 27 kg
Specifications for the receiver:
* fully synthesized with frequency resolution of 100 Hz
* has speech clarifier with frequency control range of
+/-150 Hz
* intended for reception of wave types A3 (A3E), A3H (H3E),
A3A (R3E), A3J (J3E), A2 (A2A), A2H (H2A), F1 (F1B) and
2.4F1 (F1C)
* frequency ranges 10kHz - 30MHz
* tuning error less than 30 Hz
* frequency drift short time less than 5 Hz
* frequency drift long time less than 25 Hz per year
* frequency drift 0 to 40°C less than 25Hz. Also
possibility for better figures for frequency drift when
using another TCXO.
* IF bandwidth for mode - SSB/A3J:
Min. pass band at -6 dB is +350 Hz to +2700 Hz
Max. pass band at -60 dB is -300 Hz to -3400 Hz
Classification of reception old is A3A, A3J, F1, 2.4F4
Classification of reception new is R3E, J3E, F1B, F1C
* IF bandwidth for mode AM/A3H:
Min. pass band at -6 dB is +/-2900 Hz
Max. pass band at -60 dB is +/-9.5 kHz
Classification of reception old is A3, A3H, A2, A2H

Classification of reception new is A3E, H3E, A2A, H2A
* Sensitivity 20 dB SN/N:
MF, A3J: <16 dB/1 uV
MF, A3H: <30 dB/1 uV
HF, A3J: <10 dB/1 uV
HF, A3H: <24 dB/1 uV
* Adjacent Channel Selectivity:
A3J: >50 dB at -1 and +4 kHz
A3J: >55 dB at -2 and +5 kHz
A3J: >75 dB at -5 and +8 kHz
A3: >55 dB at -10 and +10 kHz
A3: >75 dB at -20 and +20 kHz
* Blocking:
wanted signal - 60 dB/1 uV
blocking level - >110 dB/1 uV
* Cross modulation
wanted signal - 60 dB/1 uV
cross modulation level - >100 dB/1 uV
* Intermodulation:
3rd order intermodulation = delta f = 30 kHz
intermodulation level = >90 dB/1 uV
* Spurious Rejection:
image rejection > 60 dB
IF rejection > 60 dB
all others >70 dB
* Automatic gain control:
AM, AGC: attack time approx. 35 mSec
AM, AGC: decay time approx. 80 mSec
SSB AGC: attack time approx. 2mSec
SSB AGC: hang time approx. 3 Sec
TELEX AGC: attack time approx. 2 mS
TELEX AGC: decay time approx. 80 mS
* IF frequencies:
1st IF: 10.6085 MHz and 16.6085 MHz
2nd IF: 600 kHz

I had a FT-2500 and a little time to spare so I took out the cup holder and
mounted the radio in there and then filled in the sides with black plastic.
My friends went nuts trying to copy it. it did look awesome too.
It was a leased 95 dodge and when I turned it in I reinstalled the
cupholder. You never would know there was ever a radio in there when it was
complete. And reinstalling the cupholder took about 4 minutes.

I guess I do not understand clearly the 455 kHz goes through a mixer and it mixed down to 15 kHz IF before it gets to the DSP.

Has radio changed so much one can not use a 15 kHz IF, Hallicrafters uses a 60 kHz IF in one of their products. In the 756 detection is accomplished within the DSP until that time all signals into it are at the IF leve. The 756PRO is clearly a different product, not just an upgrad of the existing IC-756, read the specs again closer see what they are telling you and you may see what I mean

Hi Clint,

Thanks for the reply.

Clint Bradford (clint@clintbradford.com) wrote:

: I don't know if you're asking too much of a company or not, Keith.

Maybe I am? Like I said, my company (mail order catalog selling high end networking equipment), will take ANYTHING back, regardless of price or reason within 45 days. We resell these units as 'Class B' inventory and usually make back at least the 'cost' of these units. Perhaps I'm just used to 'excellent' policies in comparison to 'no policies'.

: Let's get back to the HT. There are published reviews of that ADI
: product. There are user groups that discuss its merits. There are
: amateur radio clubs in your area - and surely someone there has one of
: these units! There is a lot of research material you can discover on
: your own...before purchasing.

But none the less, all the research on the world is not going to match up to holding one in your hand - bottom line.

: But you want to be able to "test drive" a HT, but be able to return it
: in a couple of weeks...

: I don't believe you can expect to "have it" both ways: rock-bottom mail
: order prices, and the most liberal of return policies. Firms like HRO
: and AES are working on very slim margins on HTs. You are asking that
: they ship you a brand new unit, but accept a return in a couple of weeks
: and demand a full refund. They cannot sell the unit as "new" ever again.

Just because the mainstream 'big boys' don't do it doesn't mean that we have to adjust OUR expectations to meet their limited policies.

There are companies that do this. Examples include

Example 1:

http://www.ccrane.com

Quote from their web site :

We have a 30 day, full refund, satisfaction guarantee on all items sold by us. Returned items and closeouts do absolutely no good for our company.

We reduce the price to acquire our capital back.

Example 2:

http://www.universal-radio.com under company policies.

Returns must be within 14 days of purchase. Returned items are subject to a 15% restocking fee. Shipping is not refundable.

Companies with fair CONSUMER ORIENTED return policies are out there. It took me awhile to find these companies yesterday, but I did locate them.

: Maybe I am just spolied by having a Ham Radio Outlet only thirty minutes
: away from me...but I sure would perform research before purchasing any
: radio...and I wouldn't think of asking my dealer for a refund because I
: didn't do my own homework beforehand.

Yeah, having a HRO nearby would be nice. And I do spend A LOT of time researching my radios before buying them - but it's certainly much better to play around with the equipment YOURSELF beforehand.

5628. Icom IC-706 and DTMF; an answer

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-05 00:00:00 UTC
From: "Michael J. White" <mike.white@erols.com>
Message-ID: <7quvol$9os$1@autumn.news.rcn.net>
Source record: 99232

I like my IC-706 Mk-II just fine, but I need DTMF for the autopatch on 2 meters. Against all odds, I found that the hand-held telephone dialers sold by Radio Shack work just fine. I have my mic gain all the way up, and you have to turn off the speech compressor to avoid distorting the tones. That done, it works just fine. It's kind of a kludge, but it's a good workaround for the lack of a DTMF mic. Just hold the dialer up against the mic and beep away. Give it a try.

Mike, N4PDY

They are called "Power-Pole" connectors and they come in red and black.
I believe they are made by AMP. The electric RC car and plane folks use
them for power connectors and they draw some heavy amps, just not for a
very long time!

5631. Fuel Pump Noise.... Late Breaking Development

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-05 00:00:00 UTC
From: Stephen Mitchell <smitche1@san.rr.com>
Message-ID: <4uFA3.7003$iy.152402@newsr1.san.rr.com>
Source record: 99235

I've been playing around with various ways of getting rid of the noise I'm hearing from the fuel pump on my FT-100 and have come upon some interesting developments.

First off, the noise I'm hearing is noticable on HF and VHF only when using the AM and FM modes although when using FM the noise isn't heard but seen on the signal meter.

Second, just for the heck of it I pulled my Uniden HR-2510 10-meter mobile and my Icom IC-2100 2-meter mobile out of the closet. I was using them in my 1994 Ford Ranger with NO NOISE PROBLEMS until the truck was totalled in an accident and I got the new truck and the FT-100. I powered both radios and plugged them into the same antennas being used by the FT-100 and to my surprise.... no noise. It now looks like the problem lies not so much with the truck but with the FT-100 and the inability to filter out the noise in the NB section.

I've since contacted Yaesu Technical Support through e-mail and I'm currently waiting to hear something. It would be interesting to find someone here in San Diego with an Icom IC-706MKII and power it up in my truck using the same power lead and antennas as the FT-100 and see if the Icom has the same problem. If it doesn't then the
FT-100 will come out and I'll go get an Icom 706.

If anyone in San Diego is reading this and has a 706 and is willing to let me try this experiment just e-mail and let me know.

Again, I appreciate all of your help out there.

73's
Steve, N6TGK

Why not just ask your dealer to contact Icom to send you spare Icom plugs.
The Plug assembly is available as a spare and so are the pins. Order all
the bits and you can make up a copy of the original plug that goes straight
into the back of the radio.

I think the Texas Towers return policy, below, explains the problem of offering a no-holes-barred return policy. If such a policy precludes making a profit while offering new, unopened merchandise, obviously, some adjustments have to be made.

Bottom line, goal # 1 for any ham dealer is to stay in business :-))

Bob
n5ahy

Fromt the TxTowers web site:
Returns
Unfortunately, we are not able to ship merchandise on an approval basis. Please make your selections carefully because we simply cannot accept items back
for a refund after they have been shipped to you. In the event that we do accept a returned item, it must be returned to us within 30 days of purchase? there will
be a 15% restocking charge to allow resale at a discounted price, as a used product. All returns are at our sole discretion. Any payment due you will be in the
form of a store credit to be applied to future purchases. This rigid policy is necessary in order to assure all of our customers that they will receive only absolutely
brand new, unopened merchandise.

THAT is surely a "customer-oriented" attitude! Please reply with your
firm's URL. NOT as a blatant commercial advertisement, of course <g>.
Just for me to place in my Rolodex[tm] for future reference.

> We resell these units as 'Class B' inventory and
> usually make back at least the 'cost' of these units.

I am not a retailer, but I do know that in the cut-throat amateur radio
industry, even the "big stores" are making very little on the popular
HTs. VERY little. That gives them no "room" to create a "Class B"
category.

And you and I would scream bloody murder if we purchased a "previously
opened" item that we thought was gonna be new...<grin>

> Perhaps I'm just used to 'excellent' policies in comparison to 'no
> policies'.

Firms with "no" policies don't get much respect anymore. You'll find
some independent dealers with liberal policies...but I cannot equate,
necessarily, rock-bottom pricing with super-liberal return policies.

So...where's the "middle?" I do not know.

I have purchased HTs and mobiles of several brands from HRO. And tons of
"higher-mark-up" accessories (my wife will attest to all this...). The
folks at HRO-Anaheim have ALWAYS been fair and honest with me, and with
those I send there.

But I haven't been in the position of purchasing a "bigger-dollar"
item...using it a few days...and then desiring to take it back simply
because I didn't like it. Between obtaining info from other users,
reading reviews in print and online, I guess I have been "lucky."

> ...all the research on the world is not going to match up
> to holding one in your hand - bottom line.

Touche - you are correct!

Maybe my experiences with (a) a close-by excellent dealer and (b) several manufacturers' offices all within an hour's drive have "clouded" what others feel.

> We reduce the price to acquire our capital back.

Remember Mad Man Muntz? "We lose money on every sale - but we make it up in VOLUME!" (An old Southern Californian reference...sorry - probably showing my age...)

Thank you, Keith, for the dialog...let's see what others think!

Highwayman

Written By M.F. Luder

I was a codeless "ham"
Along the coach roads i did ride
With dual band HT by my side
Many a young maid ran from my tirades,
Many a repeater contact I had made
The League grandfathered me in the spring of o-one
But still I want more, my whinings never done

I was a sailor,
I was born upon the tide
On 14325 did i abide
I sailed a schooner 'round the horn to mexico
I went aloft to furl the Outbacker in a blow
And when the mast broke off,
They said that my signal was killed
But i am living still

I was a damn CBer
Across the South deep and wide
Where shooting skip was my only pride
A place called New Orleans on the Mississippi low
I bought an amp that would let me bellow
They DF'd me by listening for the crackling sound
But i am still around
I'll always be around and around and around...

I'll talk on 10 meters
'Cross the Continental divide
And when i reach the other side,
I'll find a place to rest my Budweiser in a can
Perhaps i may become a highwayman again
Or i may simply be a single jamming pain
But i will remain
And i'll shoot skip again and again and again...

It's obvious that some folks can't take a joke...

However, Fords are infamous for having noisy fuelpumps, ignitions systems, blah, blah, blah...

Go to www.4x4central.com and there you'll find a link to a site that has some good info on correcting Ford's noisy fuelpump. Sounds like the FT100 is just a little too sensitive.

My Explorer's fuel pump is WAY noisy!

Well, we know that not to be true considering that I got over 120,000 miles on my previous Ranger before I even had to replace the clutch. I would still have it if it hadn't been for someone else that pulled out in front of me. When I went to buy a new truck I thought about a Chevy but after reading all the market research and Consumer Guides Ford ranked higher than any other truck. So you can bash Ford all you want. I think it's more of a jealousy thing... you wish you could have one. Besides, if you had paid attention to the message the problem wasn't with the Ford but with the FT-100 and it's noise blanker.

That is a standard 220-240 volt plug. If you want 110-120 volts there are
jumpers inside the set. Check your schematic first.

Lets assume a ham dealer takes a suicide pill & lets people "test drive" HT's and radios & then bring them back for a "reasonable" 10-15% restock fee. This, theoretically allows them to sell the "used" item at a deeper discount used or as "B" stock. Think about it, walk into the store & there's a brand new factory sealed "rig" for say, $99.99. Right next to it is a used one someone brought back, selling for $90 or $85. I think most people would expect the used one to be around $50 to $70, or 30 - 50% less in order to be worth not getting the new one. A "used" $199 radio selling next to the new one for a whopping $170-180??. This would be suicide for a ham dealer, but I'm sure it might not be for computer, clothing or other merchants, so it isn't fair to say some "other" company that sells "some other" kind of items has these type of return policies.

There have been at least three on this very ng over the past few weeks -
all at 1K or less. Some have had ATU's and additional filters too.

I didn't say it had to be new.

Please see my earlier response, quoting http://www.universal-radio.com
and http://www.ccrane.com as examples for ham dealers that HAVE this
policy and they are still in business(no suicide yet!)

>might not be for computer, clothing or other merchants, so it isn't fair to
>say some "other" company that sells "some other" kind of items has these type
>of return policies.

Agreed the margins are different, but if there are SOME ham companies
doing it, then it is at least a financially possible policy for OTHER
ham companies. Otherwise, they'd be out of business.

Go to www.4x4central.com and there you'll find a link to a site that has some good info on correcting Ford's noisy fuelpump. Sounds like the FT100 is just a little too sensitive.

My Explorer's fuel pump is WAY noisy!

73 Dan / N7WPD

I'm not taking offense to any of the posts regarding Fords or the the comment about the FT-100 having a fuel pump.

You're right though, the Ford's are infamous for fuel pump noise. That's why they have a TSB out about it. I wonder why Ford can't just put the damn filter on when they build the darn vehicle then they wouldn't have the problem with complaints. They know it's a problem, they have a fix so include on all production cars. Don't make the consumer come back for it.

I find it interesting that my old HR-2510 that I got for $225 can filter the noise out but the FT-100 which cost $1300 can't filter it out. But frankly, I've never been impressed with any HF radio's noise blanker. To me they all left something to be desired. The best noise blanker I've seen on ANY radio was the Cobra 148GTL/Uniden Grant SSB CB radio.

Oh well, have a good one guys.... what's left of the holiday.

>"Please see my earlier response, quoting
> http://www.ccrane.com as examples for ham dealers that..."
I followed the link to Ccrane & they don't seem to be a ham dealer , they seem to be mainly into other types of electroniics, I couldn't even find any ham gear listed anywhere in their online catalog. (there are 3 CB radios listed under "transcievers"!) I also checked a few of the major ham equip. makers websites & they don't list Ccrane as among their authorized dealer of their rigs. Universal, however, does seem to be a dealer, the lone exception so far.

Hello, all --

I have a Kenwood DSP-100 that I am considering selling. (Condition is excellent - electronic and cosmetic.) Got it in a package deal with my TS-850. It does a real good job of cleaning up and tailoring the transmitted SSB signal. Adds unwanted-sideband suppression! Reports say it "adds punch." Can vary SSB signal from rich "broadcast quality" to a sharp signal for pileups and contesting.

On receive, it does not do what a Timewave or NIR does, but I do leave it in line with my Timewave DSP500zx -- the signals are a little crisper with the DSP-100 in line WITH the Timewave.

It's a neat little box, but I could use the money for some other projects I'm working on. Thought I'd offer it to see if anyone was looking for one of these. If not, I'll just keep playing with it :-)

E-mail me at STEVE.W3SY@EROLS.COM if you have any questions.

Over the past 25 years, my opinion of the no-code license has changed 180 degrees. As of today, an international treaty requires some proficiency in CW for hf operations. Many countries consider 5 wpm sufficient to meet this requirement. If the FCC approves the new restructuring, that will be the norm for General Class.

I would think that eventually the international requirement for CW will be eliminated. When that happens, then the US can drop CW for hams.

As one person commented, I am in total agreement that courtesy is far more important than CW.

(BTW 90 percent of my operation is CW.)

Ham radio stores are only interested in final sales. They are not like Sears or Walmart. Once you make a purchase, you are on your own - even for most service problems.

The manufacturers do little to encourage anything other than the above - and also offer inferior service - as compared to most consumer product providers.

You ask why? Very simple, amateur radio is a niche market. We are fortunate to have the offerings we have - believe me it could be worse. And, it will get worse as more XYZ type chains take over and the small shops all fold.

Yes, there are a few small ham radio stores left, but they have a hard time competing with the no tax 800 toll free numbers.

I swallowed hard the last time I bought a new rig. But, I bought it locally and paid the 8% sales tax. The price was the same as the "big discounters" advertisements. But I did have to pay the tax.

If a few more dollars were kept nearer home, there would be more customer service. There is nothing like a small ham radio store on a Saturday morning. Where the owner knows the local hams and the tech is an active local ham.

I used to be the tech in one of these little stores. Greatest part time job (could you really call it a job?) I ever had.

But the situation could be worse. Don't believe me? Try owning an airplane and you will soon see what being at the whim of the dealer, service shop, and manufacturer really means.

Man, did Bill hit that one on the head!

Try being stuck in Idaho after your alternator on your 1962 Piper Cherokee
fails.
$500+ for a new one and $250 to rebuild the bad one. The $250 didn't
include removal and re-installation after the rebuild. Talk about having
you by the shorts hairs...

I tried so hard to be loyal to our local shop because I like to support
folks I know, but after I got treated so bad at the local place I gave up
and started dialing the 800#.

You folks that have two or three shops in your area are darned lucky.
I like being able to buy a piece if gear and take it home same day.
Mailorder sucks.

2 GE Master II UHF Linked Repeaters for sale

The first Hub repeater consist of;
Currently operating on 448.125
75 watt power amp on repeater,
Direct FM Mods on link radio and repeater
2nd GE Master II Link radio already wired in
TX-RX Duplexer,
gasfet,
Scom 7k controller.
pl deck
Will not seperate components
$1200 obo + ship
Will crystal and tune to your frequency for a nominal extra charge.

2nd Repeater consist of;
Currently operating on 441.400
75 watt power amp on repeater,
Direct FM Mods repeater
GE Phoenix Link 35 Watt programmable radio w/pl already wired in and configured
to link to the 448.125 above listed repeater.
Phelps Dodge Base station Duplexer,
gasfet on reciever
Link-comm RLC-1 controller.
pl deck in repeater
Will not seperate components
$1000 obo + ship

Will Sell entire system for $2000 + ship
Call 973-584-1550/6550 M-F 9-5, or eves and weekends 973-770-0242

5684. QRP Rig

Newsgroup: rec.radio.amateur.equipment

From: "Ralph C. Blach" <rblach@intrex.net>
Message-ID: <37D4579F.6C91022E@intrex.net>
Source record: 99081

Hi,

I really enjoy QRP and my home brew 40 meter rig just bit the Dust.

I was wondering if there are any comercial QRP rigs that cover all the
HF bands and modes. The tentec scout is nice
but it has the Module plug in and I liket avoid that.

Any Ideas.

Thanks

Chip

Hey Tim,

You may want to take a look at the "K2RIW" type of VHF/UHF
amps, they used 4X150's on 2m and 432. Really slick screen protection
And control circuits. Just adjust the voltages to fit your "jug"..
I applied the above concepts to a 4-400 that I used for rtty and SSB
on 80-10m. I could run my SB-104A at 5 w, out on rtty and got about
300 watts outta the 4-400. Worked alot of europe and Africa with my
model 22 tty. (Then the kids were born... oh well)

Don't worry about it. I run all my radio (12volt) equipment at 14.5
to 15 volts

Tom

Hello,
I recently purchased a new SS-30M (switching). It is my first Astron
product and purchased from a hamfest dealer, so have some hopefully
minor questions about it.
I've noticed that output is about 14.3VDC, is there a way to adjust
this
down to 13.8, or does it matter? Also, my unit did not come with an
owners manual, did they leave something out? It came with what looked
more like a product brochure, listing all models and specs... Finally,
does anyone have a schematic that they wouldn't mind providing?
Thanks!
Tom WA2CRG

Hey, be carefull if you're leasing it, they have a dim sense
of humor about those things, from what I understand.

Otherwise, why not? One of the cool things about owning
something is that you can drill holes in it! (When I got my
ticket, the first thing my ham friends asked was "have you
cut a hole in your car yet?", partly as a rib, partly as an
indication you're serious about the hobby)

I have an old bronco, and never did much to it, "because it
was new", now it's old, and I wish I did. I would have
enjoyed using the truck more.

This may not help much, but a 1988 ford light truck has only
3 wires going to the fuel pump - 1 ground, 1 sensor, 1 pump
power. Just looked at the wiring diagram for my old bronco,
covers F series too.

I can't imagine what the extra wires are for, but I'm
betting they have something to do with the noise. Wouldn't
it be interesting if one of them was a tach feed from the
pump, and the other feedback to control pump speed? I'd
also bet that the filter was designed to help with public
service radios, at VHF frequencies.

I have one. Make sure you get an aftermarket antenna. The display cover glass is rounded which makes it nearly impossible to rea the display in bright light. The 9 volt battery makes it feel like a hand grenande, although this isn't that bad for a full 5 watts. i do like it a lot, except for the stinkin display window.

5702. FS Radio Shack HTX 202

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-06 00:00:00 UTC
From: gojollybill@my-deja.com
Message-ID: <7qvf6fvfq1@nnrp1.deja.com>
Source record: 99102

Hi Listmates,

I have a used Radio Shack HTX 202 which needs TLC so I will sell it cheap, that is asking $50. It comes with the Nicad battery pack, the AA Cell pack, the Rubber Duck, the wall charger for the Nicad.

TLC is required because it has distorted audio on transmit (Rx is ok), the speaker mike jack should be changed and the squelch has an annoying habit of tightening up when using the rig for a time.

Radio Shack tells me they will repair it for $75 up front with actual cost usually about $50 for repair. (They refund your money if the repair is less than $75).

So, anyone want to have it? I would repair it myself but I am upgrading to a 2m Mobile.

Thanks For Reading,

Greetings, all:

I need info on an old Kenwood TM-701A dual bander that I picked up recently. I don't have a manual, and would like to acquire one. Barring that, I'd like info on how to program a PL and save frequency and PL to memory. I don't even know if this rig had a PL encoder installed...was it an option? I can get a "CTCSS" line on the display, but have no clue as to what tone is transmitted or how to change it.

This rig also has the RC-10 remote controller (looks like a telephone handset) installed. I'd rather have a basic hand mic...anybody have one that will interface this radio?

I'm not very familiar with older Kenwood stuff, and ANYTHING I can find out will be greatly appreciated!

Thanks in advance!

Can the software inside the TH-D7 be ugraded without a chip change?

I've no interest in KISS but there are some missing TAPR commands I'd
like to see (like mh), if there's spare real estate available in the
chip and there is the facility for updating.

Regards,

5712. Kenwood TM-742A Problem - No TX on VHF

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-06 00:00:00 UTC
From: RS <ReinhardSual@navy.org>
Message-ID: <4URA3.8$xH5.267@news>
Source record: 99112

I have problem with my TM-742A. The power always drop on VHF once it warms up. But now it is completely dead. I read on this newsgroup (i forgot the details) about one that has similar problem. Which caused by APC module (consists of Transistor, Ceramic Capacitor and some other thing). Could anybody help with detail?
I already send this rig to the repair shop 8 times for the same problem!
I normally set this rig as crossband Repeater with TOT 3 minutes using CTCSS.... The power module (SAV-17) is always in good condition. Apparantly there is a problem on driver circuitry or protection module....
It always fails on VHF (In VHF I use LOW 5 watts, on UHF I Use HIGH 35 Watts)...! I already put 2 fans to cool it down...

Hello,

I was wondering if any one had info on this antenna. It's label advertises it as "THE ONLY COLLAPSIBLE PORTABLE AERIAL LOOP. Made by the J. Nazeley Co. Mfrs. New York, New York USA. Pat. Pending. I've never seen one before so I found it interesting. It is has 4 spreaders in a quad configuration. A cloth covered wire loop with a black Bakelite or some type of hard plastic hinged hub. It works great. I've got it hooked up to a Hallicrafter SX 122A and can hear world wide. If anyone would know the approximate dates of manufacture and info on this company, I'd like to know more.

Thanks,

bobn9lzk@lse.fullfeed.com

5720. WTB Motorola UHF Maxar 50 @ ~$50.00 each.

Yep;

Just scored another one at it's
FAIR MARKET VALUE, of $50. Still
need a couple more working Motorola
Maxar 50 UHF, PL type radios. With
or with out the microphone, power cords
(accessories). Please dig around and
see if you have any of these older 1 or
2 channel crystal, compact UHF mobiles
in your, junk radio box.

Poor cosmetics ok, but it MUST BE WORKING,
must be UHF and PLEASE, it MUST BE A MAXAR 50!!

Also please, DO NOT POST REPLIES HERE on the
NG. Contact me PRIVATELY by E-Mail or telephone
with any information you have.

Thanks again to all that have supplied UHF
Maxar 50's thus far;

Thanks for reading;

Jerry -- interesting indeed. Been a big 10M nut since 1979 at the top of the solar flux two cycles ago. My guess is that the new RS 10M rig wont be of the same quality as the old Uniden HTX-100 -- just a guess, but, I'll bet this one is more of a glorified CB radio -- maybe it has FM in it -- probably put FM in, and took out CW?

Given the influx of bootleggers in the low end of 10 meters, and the number of bootleggers that I've heard actually in-QSO with hams on the novice sub-band, my bet is that these new "10M rigs" can be modified easily to the surrounding frequencies, or even designed/started that way!

At $150 bucks, might be worth it just to try. Was working JA and EU yesterday on 15M, so went up to 10M and low-and-behold, the band was wide open.

Karen,

For new equipment there are 3 options I am aware of. They all are
signal to noise type voters - they only need audio from the
rcvrs to do the voting.

LDG electronics has an 8 channel microprocessor controlled voter in
kit form or assembled. They have a web site, but I don't have the
addr
handy. Phone is 410-586=2177

Doug Hall electronics has a 4 channel voter card. Assembled only,
expensive.

Several years ago, QST published an article on a simple 2 channel
voter. FAR
circuits has bare pc boards available for it (only about 6 bucks).
These can
be cascaded for more than 2 channels. This was written up in October
'92 qst.

I have the following IF transformers for sale - please take them all as a lot - $15.00 plus postage - -

2 New in the box 85kc IF transformers - replacements for the BC453 Q5er.

4 new IF cans - only have a part number for them as marked on the top - G115A/G116A - slug adjusments top and bottom.

3 new IF cans - 1 - #22195, 2 -#22196 marked on top of cans. Cans dated 1944 and 1945.

Thats all I know about the cans. Most likely from military equipment replacement kits, Im sure someone will recognize and want them.

>the dumbest cop in Warren, PA.
>

Actually you are quite correct. There is no mention of "cellular" in Title 18
of "our" US CODE.....in fact what it does say is :

Sec. 2511. Interception and disclosure of wire, oral, or electronic
communications prohibited

(1) Except as otherwise specifically provided in this chapter any person who -

(a) intentionally intercepts, endeavors to intercept, or
procures any other person to intercept or endeavor to intercept,
any wire, oral, or electronic communication;
(b) intentionally uses, endeavors to use, or procures any other
person to use or endeavor to use any electronic, mechanical, or
other device to intercept any oral communication when -.............

ad-nausium.......

The key words to remember here is "ANY" and "COMMUNICATION"....this said one
must remember that the only thing that keeps bouncing off the screen in this
newsgroup is "cellphone" conversations when there is enough teeth in the law
to haul your ass in for telling stories about ANYthing else your scanner hears
with the following exceptions:

(g) It shall not be unlawful under this chapter or chapter 121 of this title
for any person -
(i) to intercept or access an electronic communication made
through an electronic communication system that is configured so
that such electronic communication is readily accessible to the
general public;
(ii) to intercept any radio communication which is transmitted
-
(I) by any station for the use of the general public, or that
relates to ships, aircraft, vehicles, or persons in distress;
(II) by any governmental, law enforcement, civil defense,

private land mobile, or public safety communications system,
including police and fire, readily accessible to the general
public;
(III) by a station operating on an authorized frequency
within the bands allocated to the amateur, citizens band, or
general mobile radio services; or
(IV) by any marine or aeronautical communications system;
(iii) to engage in any conduct which -
(I) is prohibited by section 633 of the Communications Act of
1934; or ....etc (you get the point).....

Now where does Indiana and Kentucky get off making their own laws that contradict the US CODE. Seems to me that the intent of the above was to allow ANY one to listen in to ANY government agency communication......food for thought......

Fred

Hello

I have a Kenwood TH-77A HT and am looking for some info on battery charging times. The Battery is an Kenwood PB-11 NiCad Battery pack capable of 12vDC 600mAh or 6vDC 1200mAh. The battery charger is a basic wall charger (BC-9) that came with the radio. I also have a Kenwood BC-10 compact charger but heard somewhere that it can't be used to charge the PB-11. Any info would be appreciated.

I have one Icom IC-R100 Communications Receiver forsale. This is a Scanner plus a Shortwave Radio. Its in good condition and had been installed in the dash of a Toyota 4-Runner. Owned by non-smoker.

Wideband frequency coverage 0.5 - 1800 MHz continously with FM, AM and Wide FM modes.
Multiple scan functions including auto memory write scan.
24-hour clock system with muliple timer functions.
A variety of tuning steps corresponding to any operating band. 1k, 5k, 8k, 9k, 10k, 12.5k, 20k, 25k.
800 MHz band NOT Blocked.

Comes with: Mounting bracket, CP-11 (optional) 12volt cigarette lighter cable with noise filter plug, original operator manual.

Asking $600.00 or B.O.

Message-ID: <7r2332osh2@campus1.mtu.edu>
Source record: 98949

DSI model 5600A Freq. Counter.
Was sold in high school auction.
Purchased with lot of equipment for $500.
Works OK, range 50-500MHz. Works best on large-time sampling and
with lower-frequency applications. Not recommended for RF environments,
but great for pulse-counting and direct-connection applications.
Red LED display, 12vDC jack in back. Handle/stand built on.
Provisions for rechargable battery and portable use with seperate options.
I'm willing to let this go for $60.
It works perfectly.

Looking for the following old electronic musical equipment from
1960-1990, in any condition, broken OK:

synthesizers
keyboards
drum machines
sequencers
effects
MIDI equipment
old modular patchable analog synths

I prefer older analog stuff with plenty of knobs but will consider
anything, especially if it's unusual.

For a better idea of what I'm into, please visit:
http://members.aol.com/rolandman1/index2.html

Pearl SY-1 Syncussion electronic drum module
PPG Wave 2.3
Roland Jupiter 8 with or without MIDI
Roland MC-202 Microcomposer
Roland Space Echo RE-501 or others
Roland System-700

If youve got anything or know someone who might, please email me at
rolandman1@aol.com and be sure to include price and condition. Thanks
in advance, sorry if this message bothers anyone.

> DSP-100 in line WITH the Timewave.

Hi Steve,

Your observation on how the DSP-100 compares with other outboard DSP units is absolutely correct. It was not Kenwood's intention to address the same problems that NIR and Timewave do. On the other hand, NIR and Timewave do nothing towards generating a quality SSB signal... which is the main function of the DSP-100.

Kenwood did a fantastically lousy job in communicating either the virtues or the limitations of this unit!

Rob,

Well I don't know much about that charger but I do know that I use a standard formula that is fairly well known that has worked for me for years.

Take the battery capacity (600mah, or 1200 mah, in this case) and divide it by the charging rate. This will be listed on wall charger, and in most cases (for slow chargers) is around 60/70ma. Then take your resulting time and multiply by 1.4.

Example assuming 1200mah battery with a 70ma charger.

1200/70 = 17.14
17.14 * 1.4 = 24.00 hours

...and don't get hung up on charging exactly 24 hours or whatever the result is - since your charging rate is so slow, your chances of damage to the battery due to overcharging is slim. When in doubt, check the temperature of the battery immediately after the charge it should be 'warm'. If its hot to the touch then you've overcharged.

Same general rules apply for fast chargers too - excepting that temperature stuff, fast chargers have a tendency to really raise the battery temp real fast.

Hope this helps,

Keith

Maybe I spoke too soon. I saw scanners and at one time they were an ADI transceiver dealer.

But nonetheless, I'm sure there are more out there, just because I've personally found only one, doesn't mean there aren't any more.

On the TS440 the VS-1 cable is built-in to the wiring harness. You do
not need any other cables...

I recently had a VX-1R battery that seemed to have failed. It showed virtually no voltage, and the radio refused to charge it at all. The thing sat in a drawer for a few weeks because I didn't have the heart to throw it away. Just for kicks, I hooked it up the VX_1R's wall-wart power supply directly to the terminals of the battery for about a minute, then checked the voltage ... 3.2V! It then charged normally, and seems to run just fine! After a few cycles, I see a seeminly normal life.

Don't throw away those "bad" batteries just yet!

I've often seen postings suggesting that SMA circuits are easier to work on than ordinary thru-the-board circuits. I'm about to find out, I guess.

I've got a Yaesu VX-1R that's showing serious deafness on the 2M band. It went out sailing with my daughter, and went into the drink when she dumped the boat. The plastic bag it was in leaked, and she transmitted on it before realizing it was wet. I dried it out and it seems to transmit OK on 2M and 440, and receives on 440, but it's now deaf as a post on 2M. Receives a 5W signal only if within 5 feet.

Yaesu "kindly" offered to repair it for $225. Note that new radios cost only $200 or so now, so I declined, and bought a new one instead. I just can't throw out anything electronic, however. I'm sure you all know the feeling. :) So I'm going to try to fix it. My best guess is that an RF-amp in the 2M front-end is blown. Hopefully nothing else.

Two questions, therefore:

- where do I get a heat gun appropriate for SMT work? I seem to recall Gary Coffman recomended a specific unit before. Other tools I might need or want?

- Will I be able to find replacement parts? I'm only familiar with standard components with leads as long as toothpicks. Does Yaesu sell replacement components? someone else?

Thanks for any advice.

Drake TR-7 transceiver, PS-7 power supply, MS-7 speaker, Drake desk microphone (7077?), AUX-7 board, two TR-7 owner's manuals, one TR-7 service manual in Drake binder (not copies). No CW filter and no noise blanker. Condition: the radio receives and transmits ok and appears to transmit on any receive frequency. There are scratches on the cabinets and the aluminum bight work on the top front of the TR-7 and PS-7. The front panels look good. I am posting this for another ham and he is asking $600 for the lot and it will NOT be separated. Shipping is not an option...come buy and pickup in the Detroit Mich area. Or, it may be brought to the Findlay Ohio swap.

Ok Bertone...I think that's about the last of your crap I need to hear. Your gonna put this guy and that guy on your stupid fraud list. Some may deserve it..some may not...It sounds like all it takes now is to question your intent to make that bad guy list. I do remember that you too have a reputation of not delivering what you promised...seems that you have owed a wall charger to a ham for quite some time now. Are you on your own fraud/crook/lowlife list..?? I think enough is enough as I'm sure most others on the newsgroup do.

Unless you know "first hand" and for a FACT that a person is a crook you best just keep it to yourself before the glass house you live in has a few rocks thrown at it also.

Well, I love my R-2, as it is the perfect size for me, and exhibits
better sensitivity in the 800MHZ band than my AR2700. But, this is
one person's opinion. You have to weigh certain factors, like the
fact there aren't any numeric keys and it wont trunk-track. i am
lucky enough to live in an area (Cincinnati, Ohio) where the voters
continually turn down a levy to upgrade the communication system. The
one feature I love about the R2 is the CTCSS search and decode, a must
if you live in a non-trunked, heavy traffic area. I notice your
e-mail is Italy, so I am at a loss as far as vendors. Here in the
States Lentini is selling them for $199.99 delivered, but it would be
a US "neutered" version.

For the specs on the US model, try www.icomamerica.com and for the
international version, try www.javiation.co.uk

QST did a review a while back....If you are an ARRL member you can check
their web site archives....
As I remember, their only complaint was the one knob with about 20 different
functions depending on menu selection (but this, unfortunately, is typical
of many of today's radios.) Of course, QST rarely trashes any rig from a
major advertiser :-)
P.S. you probably should have checked the reviews *before* ordering <g>!

5802. ICOM HM-77A Problems not Transmitting???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-07 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <19990907194418.21067.00006013@ng-bg1.aol.com>
Source record: 99005

Hello,

I am having a problem with my ICOM HM-77A DTMF and mic for my 706MKII. For some reason today the mic just wouldn't transmit on any band at all. I noticed that the little red light is lit and will not go out no matter what I do. I read over the instructions and nothing sheds light on the matter. I tryed to reset the mics CPU with no luck...the red light stays on..the mic won't transmit.

I put my 706MKII on "VOX" the mic would then transmit but would not allow manual keying of the PPT button. Any I also tried the mic with the "LOCK" switch on and off....works neither way...

Any experiece with this mic or want is going on... totally frustrated!

Sorry hit the send key by mistake. I don't have a lot of experience with this but I did have a similar situation where I did not have a chance to rinse the rig in fresh water before it dried, feeling gutsy I turned it on and found the radio acting really goofy after I gave it a good cleaning in fresh water and dried it it worked fine.

Message-ID: <37D5CC09.83E1C5A0@dirtball.com>
Source record: 99012

I have a ICOM 740 HF moblie that I would like to sale or trade. I'll take 300.00 cash plus shipping thats about 25.00 give or take. I trade it for a Pentium 233 socket 7(I will considerany other intell pentium computers above 120 Mhz) with at least 2 gig hard drive and 32 megs of ram, 56K V.90 modem,(Iwill consider 33.6 and 1 gig harddrive) Keyboard mouse and 13in svga monitor. Or I will take a 2-meter all mode base rig digital readout. Tell me what you have to offer for this HF rig.
The ICOM 740 is the stock IC-740 it has no power supply it runs strickly 12 volts DC. The rig is in good clean shape and I don't smoke and the guy that had it before me doesn't smoke. I was the third owner. I ran the rig in the moblie. The rig covers all the ham bands. It doesn't have a continous coverage receiver.The rig has both sidebands CW and RTTY as far as modes. Its demensions are 111mm (H) x 286mm (W) x 374mm (D). Its rated at 200 watts input. I will include stock mic and instruction manual.
Drope me a line and make offer
73 from Oris

Hi,

I have an ADI 2m HT for sale in good condition with charger, rubber duck, 9V rechargeable pack.
Unit is in good working order with fresh keypad and display lights. Also have nice padded neoprene belt case to hold it in. HT also comes with a Diamond dual-band HT antenna (better performance than the stock antenna).

Looking for $100 shipped or trade for ham gear. Interested in the following, and would be willing to add cash where applicable:

Yaesu VX-1
Icom Q-7
HTX-100
May also be interested in Iambic keyer combo

Let me know what you've got and let's trade...
Please no Motorola, commercial, or tube stuff.

It is a sweet radio. Crossband is rather limited (one-way only).
Other than that, it performs extremely well. Excellent sound with a
Heil microphone.

Built like a rock. However, check the microphone connector. I have
seen several with loose connectors (minor issue - just tighten up
connector looking in the front of the radio).

More information about my setup can be found on my web site.

The dots indicate one of the PLL's has unlocked. It is probably the Het
osc. Just recently I have found a 5000 with the famous TS440 potting
compound problem. It may be the same...

5821. HELP ME!!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-08 00:00:00 UTC
From: racerjm3@aol.com
Message-ID: <19990908102820.24949.00005527@ng-cq1.aol.com>
Source record: 98893

I need the cable that comes with the vs-1 synthesizer board for the ts440. I need it to read the frequency display. Some one told me it is in the radio but I want him to come and show me where. I can't find it and every one tells me I need that cable except that one person. If you can help me I don't want to bye a hole other board but if the price is right I guess I'll have to. email racerjm3@aol.com if you can help me email direct to that address if you can. Thanks

5822. Re: ADI AT-200 2m HT FS/FT

Newsgroup: rec.radio.amateur.equipment

From: cc732@freenet.buffalo.edu
Message-ID: <FHqtu5.uC@freenet.buffalo.edu>
Source record: 98894
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

What can you tell me about the ADI? How much power out?

Any accessories with it - like spkr/mic?

I have a VX1R I might be willing to trade if you could toss in a
a few bucks. Has a Diamond dualband flexi whip, MFJ spkr/mic,
spare Lithium-Ion battery (never charged!), original box and
book. With the extras I'd like $250, but..?

Interested? Reason to unload it is: I'm in the boondocks and I
really need something with a little more power to reliably hit
the repeaters around here.

There are a number of "secondary" functions that you access by holding the function button until you get a double beep. I can't recall all (as I just sold the radio), but here's a couple I remember.

F (1 sec) then VFO: Changes scan mode from 5-second pause on an active channel to pausing until activity ceases.

(I think) F (1 sec) then MR will skip the displayed memory during scan. (it puts a star or removes the decimal point...I can't recall which).

Also, there are three scan modes. When you are on a VHF (or UHF) memory channel, pressing the MR (or UP or DOWN on mic) for more than one second will start scanning THAT band. After starting scanning, press the BAND button and it will scan all memory channels on both bands. Another handy scan feature scans between one VHF and one UHF channel. Set the radio on the VHF memory (or VFO) frequency, then set it on the UHF frequency. Press and hold the BAND button for more than one second and it will scan between those two frequencies.

You can band scan by pressing and holding the VFO button until scan begins. Alternately, you can press and hold the UP or DOWN button on the mic when the radio is in VFO mode.

Note that scanning is rather slow.

The Duplex button allows you to listen on one band while transmitting on the other. I never found it too useful, but it can be used for cross band repeat (see below).

The radio can be modified for extended transmit (If not already done). Open the top (with speaker...I think) and you'll see a loop of green wire coming from the area of the front panel. Clip it to enable it.

THere is also a cross-band repeat feature that requires a mod. The mod (and the above one) is on QRZ.com.

Nice radio!! BTW: I seem to recall that it did have PL decode as well as encode. Could be wrong here!

email if you have any other questions.

Mark

>
> Yes, if the antennas are at the same site.

NO, a duplexer is NOT needed in a lot of cases of single site/
split antenna situations! Depends on the equipment, antennas (mounting,
gain, pattern, etc), coax used (how well shielded and how far apart
the TX and RX cables are)....basically, the overall isolation between
TX and RX is what counts...and with a 1 Mhz or wider split on 6 (which
the majority are still using thankfully!), this is easily done!
Not easily done with the God awful 500 kHz split some areas use
(stepping back in progress by doing a band plan based on 20-30 yr old
radios!)

> > If not, what should the seperation be between the two?
>
> About 10 miles!
> (Depending on power level and receiver.)

Hmm, you obviously never ran a 6mtr rptr...I know of several single
site split antenna sites where the vertical sep is less than 100ft
and the rptr is running 100 watts! Vertical gets you more isolation
than horizontal...but with 1 MHz sep, I can run less than 1 mile
horizontal and less than 100ft vertical if the TX is commercial
quality and meets Parts 90 and 97

> > Thanks, I am new at repeaters.
>
> You should read the Repeater books already written.

They dont tell tooo much...they are out of date and need rewriting
to come up to today's standards BUT he and others like him CAN join
the original repeater owners remailer on Onelist (repeater@onelist.com
is the address)....He can learn from those of us who have been
there, done that....still doing it after 20+years!

Amateur equipment has no approval process for speaker-mikes that have no local oscillator nor generate a signal on its own. I mis-spoke in the last message.

But I still wanna know what this gentleman is going to do with his setup! <g>

From: Mark Kempisty <NOPEmkempisty@pavcal.com>
Message-ID: <7r6hmdjcc1@mitl.MITL.Research.Panasonic.COM>
Source record: 98913

It looks like the RS-232 port died in my TS-850. The level translator works fine when doing a loopback test and I have tried two computers. I have looked at the schematics and the only active components are a 7404 inverter and the Kenwood's microprocessor.

Has this happened to anybody and if so, what was the fix? I can replace the 7404 but if its the micro, I'd send it back to Kenwood.

Hello, I need help locating two potentiometers for a Kenwood TS-530S. The part number from the Kenwood service manual is: R01-3414-05. This part is no longer available from Kenwood or its parts distributor, Pacific Coast Parts. So, I am hoping someone has a couple of these hoarded somewhere and is willing to sell them to me or possibly direct me to another source. Thanks for your time.

Sincerely,

Robin Deputy (KE9SQ)

5849. Kenwood TS-930S MRF-422 Finals

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-08 00:00:00 UTC
From: mjlinden@mcs.net
Message-ID: <7r6paq$ej3$1@Nntp1.mcs.net>
Source record: 98921

I'm trying to get an idea of how many people who have owned Kenwood TS-930S have had to replace the MRF-422 final transistors. I understand that the low-beta type that are used in the 930S are no longer being manufactured and are going for about $100 per matched pair (it uses two).

I've got a standing offer from a friend to trade my mint TS-530S (6146B tube finals) for his mint TS-930S (plus some cash). I'm just a bit concerned about being able to replace the finals if they go. The TS-530S' 6146B finals are still widely available for a reasonable cost.

Any input on your experiences with the 930S' finals would be appreciated.

Thanks, Michael N9BDF

I need to trade someone for a JT1000 UHF. I have the following list of stuff to trade. Please let me know if you can help.

Mike

3 Maxtrac 800's mobiles B5 (no mics or power wires)
2 STX's
1 MT1000 99ch UHF (no charger)
1 GP300 UHF with battery and charger
1 VHF Maxtrac(will take 5 days to get) no mic or power wiring
3 Saber I UHF's 12ch 440-470 split >>no battery or charger<(used condition) they
range from a 5 to a 8 on a 1/10 scale. Some have antennas, some don't.
2 Johnson VHF's 120w 99ch - 1remote and 1 dash (Remote 5 days, dash here) with mic and short power wire
2 Johnson 40W VHF 99ch(no mic or power wires)
several strobe power supplies and strobe heads
plain replacement strobe bulbs
siren and speaker
push button control switch (like in Galls book

Could it be that the 847 is a good rig an people don't want to give it
away? It is odd that 706's of all stamps lose value very rapidly, and
that jobbie holds up.

And also, the 25 pin connector that comes on the cable needs an adapter to fit in to the 9 pin connector on the computer. So add that to the cost!

It is Built into the harness for the Kenwood TS440S. If you know where
to mount the board the plugs are there.

READ THE MANUAL.

That's right with all of the bad things going on with the new FT-100, we want to buy one or two.

I have seen many posts in various newsgroups about the extreme disgust with this radio.

A couple of us are looking for FT-100's and are willing to work through the difficulties with Yaesu.

If your radio is dead or bad, whatever just NOT smashed, run over, dropped from 6 floors high, etc., you get the idea, I will buy it.

Of course we are looking for an extremely great price. We do not want to spend any more then $250.00 per radio. We will also consider a fair price if you have a working unit that you no longer want.

I would never consider such an insulting low offer any other time, but from some of the posts I have seen, some folks said they are about ready to pitch them. So if that is the case let us know!

Also I am interested in the ATAS 100 antenna. I have seen a lot of bad posts on this also, want to try for myself.

Please send all offers via e-mail to morningstargroup@hotmail.com or decode the email address in this post and send there. Please do not reply to the newsgroup, since for some reason some of the newsgroup posts are getting lost on my ISP, and I cannot sometimes follow an ongoing thread.

Of course, like all posts, this one will generate flames, send those to mrnstrgrp@aol.com. I will check there first, really!

Harry:
1.) Contact the seller and find out if he is aware of that defect - was the radio sold as operational? You might want to ask for your money back.
2.) The part number for that lithium battery is: W09-0364-05 I don't know if that helps but maybe Kenwood can still supply the part or maybe someone on this newsgroup knows a replacement battery. I have the service manual for the radio and if I can locate any more info on the battery, I will scan the page(s) and e-mail it to you.

Harry,

I too just got a used R5000 through the NG. The seller had the common sense to take the radio in for a complete service before selling it. Consequently, it works like new. Ironically, the battery was replaced, and that part number is W09-0599-05. Cost appears to be about $6.00 (I have the repair record in front of me).

Contact me if you want to know who did the service; it's on the east coast. I hope you get something out of the guy who sold it to you; however, don't let it sour you on the Kenwood receiver; I'm enjoying mine.

>
> 73, Keith

Also remember that the DSP-100 came out around, what, 1992 or so. There really was not a whole lot happening in the ham market in DSP yet. Remember the so-called DSP in the original Kenwood TS-950SD?

I have to chuckle when some of our ham brethren rant about how useless the DSP-100 is compared to a Timewave, etc. I just say, "Well, DUH...." That's why I want to be real clear about what the DSP-100 does and does not do. Yes, it's a misunderstood piece of gear..

Harry:
The R-5000 manual also says that it takes about 6 hours to charge a deeply discharged battery. The battery will last about 10 days with the receiver unplugged. Have you let the battery charge overnight (radio plugged in)?

The procedure to perform a complete reset of the radio is as follows:
Switch on the power with the A=B key pressed. You might try this procedure, just remember that it erases any frequencies stored in memory.

Hello, Seb --

All that is needed is a computer and a 16 bit sound card. Download the free software and you're almost ready to get on the air! See the response from the other ham on this thread. He gave the URL that will link to the PSK31 site.

If you have an accessory jack on your rig that includes fixed level audio in and out, you wire them with shielded cable to your sound card output and input. You might need to use the sound card mixer control to adjust the audio in and out levels.

That's really all! Check out the web site and feel free to e-mail me if you have more questions. I've played with this mode and like it quite a bit.

5869. FS: Military general coverage radio R-366

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-08 00:00:00 UTC
From: Bob <XYZ_p15218@flash.net>
Message-ID: <01bef994$d72429a0$d00ad7d8@default>
Source record: 99020
Cross-posted to:
rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.shortwave,rec.radio.swap

For sale, one ~1951 vintage US Navy R-366/TRR-5 general coverage receiver that covers .54 to 30 MHz in five bands. This radio was used for entertainment purposes and is truly a monumental piece of equipment. Weight is specified as 85 pounds and the cabinet is 14" high, 19 3/4" wide and 19 3/8" deep. The R-366 has 16 tubes with two RF amplifier stages, two IF stages, crystal filter, a four gang tuning capacitor, and push-pull audio output. All of the tubes with the exception of the rectifier are "minature" type (6BA6, 6AQ5, etc). I have owned it for about 20 years and I am thinning things out prior to a house move. The radio is nearly bone stock except for the addition of an antenna trimmer circuit and this is easily removable if you wish. Most of the original paper capacitors have been replaced and the radio works very well. The radio's front panel is very nice, there are scratches on the top and sides. I don't know what it's worth....it ain't no 51J-4, but it is not often seen....so I'll ask $175. Shipping is out of the question. I am located in the Detroit Mich area. On 12 Sept, this radio may be brought to the Findlay Ohio hamfest. Phone me at 313-382-2213 after 4PM EST , 313-317-2398 days, or reply to XYZ_p15218@flash.net but remove the XYZ_.

>
>--
>"Mike Not Mic"....... ï¿½ï¿½ï¿½.......
> w5old@sonetcom.com

Not a picture. However, the 7401 was a reworked HW-2036.

The thumbwheel switches were replaced with digital counters and buttons to let a unijunction transistor oscillator count the digits up and down. Pretty cumbersome, but it did allow scanning to compete with the Yaesu, Icom and Kenwood early models in 1979-1980.

There were some improvements to the LO chain and the VCO to improve spurs, adjacent channel selectivity, and operational frequency range. Also a few changes in the front end for sensitivity. There was also significant work done to eliminate the MANY birdies in the stock HW-2036/2036A.

The transmitter RF deck was changed to stabilize the poorly designed 2036 PA (when good RF design techniques were applied to the 2036, the power output went from 12 to 24 watts!). The power output on the 7401 was adjustable.

It was not a major improvement over the HW-2036 and did not sell very well. It was more of a "correcting the defects" model, except for the frequency readout, which was a step backwards, IMHO.

It has been a long time, nearly 20 years, since I watched this redevelopment. The engineer that worked the 7401 has since passed away. However, the problem overall was in the lousy marketing input to the engineering department. The marketeer at that time had absolutely no feeling for the current amateur market at VHF/UHF.

I am fairly new to ham radio and I will be buying a 2M mobile radio within the next week. I am looking at the ICOM IC-2100, the Kenwood TM-261A, the Yaesu FT-2600, or something similar (even a good used radio). If you have any suggestions of a similar radio I would like to hear them. Which do you think is the better buy? Thank you for your time and help. 73's

The number one rule for wet electronics is GET THE BATTERY OUT IMMEDIATELY.

Corrosion is drastically slowed, and you have a chance to save it. If it was dunked in salt water, then rinse it in fresh, distilled if possible.

Then dry it out, use heat if available, but no more than say 110F or you risk warping the plastic.

Most electronics made is washed in water at the end of the assembly. It's de-ionized water, but it's still water.

5881. Morris Coil Winding Machine Coilmaster

If you are interested in a Morris Coil Winding Machine Coilmaster please view my item on ebay currently 9-7-99 thru 9-14-99.
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=159740070
Here is the write-up:
This appears to be a new coil winder, which was never used. I had to put it together for the picture. If it is not new, it has seen little use. It is all metal and wood, no plastic parts. These items are getting hard to find but the demand keeps going up because of the scarcity of coils and IF transformers. Most people have to make there own coils now for vintage radio and TV equipment. It is hand operated and will produce self-supporting, universal, and honeycomb coils, also solenoid, single-layer, etc. Three cams are supplied, 1/8, 3/16, and inch. These cams used in various combinations with the four gears, and using different wire from 22 to 40 gauge, many types and sizes of coils can be made. Qty four 32-pitch gears are supplied with 39, 40, 42, and 44 teeth. This coil winder is made by Morris Register Company and is called Coilmaster. Comes with a two-sided sheet of instructions.

5884. Help w/ Kenwood R5000 display+RX problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-08 00:00:00 UTC
From: N1QVE <harry@connix.com>
Message-ID: <37D63118.5110C56D@connix.com>
Source record: 99035
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.equipment

Hello
I recently bought a used Kenwood R5000 on the net and it arrived with an "unadvertised" problem: when the set is first turned on, the MHz display shows the numbers for about a second and then reverts to " . . . . . " with nothing but noise audible from the speaker. Spinning the tuning knob brings the numbers back up but it blinks out again as soon as you stop tuning, still with no RX. After 15 min or so the set is fully functional. The problem affects both VFOs. I do know that the Li backup battery is dead, but since I rec'd no manual, I'm unsure if this is somehow related.

Help?

Thanks and kind regards,
Harry

A number of people have suggested this. The radio was dunked in fresh water, which reduces the likelihood of salt bridges, but does not eliminate them completely. I'll go ahead with a dw rinse. Thanks. The gentleman who mentioned that the battery should be removed - yes, I did remove the battery ASAP.

I cannot say it is the best, but I recommend you look at the ADI AT-600 dual-band HT.
http://www.adi-radio.com
Their products are solid, support is excellent. MARS/CAP mod is easy to do if you are so licensed. (Software, keypad mod, no opening the case.)
This model even has AM receive for listening to the aviation band. Because they are a lesser known brand, you get more features for your $$ compared to the big names of Yaesu, Icom, and Kenwood.
I own the AT-201 2m HT, and have been very pleased with the product and the company. If I had it to do over again I would have bought the AT-600 instead. I needed 2m, but 70 cm and wide band scanner features including aviation would have been nice plus.

5893. Re: Mobile Camping setup

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-09 00:00:00 UTC
From: Rudi Wiedemann <wiedemann@home.com>
Message-ID: <WCQB3.7876$Vi5.90815@news1.frmt1.sfba.home.com>
Source record: 98794
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

If you're camping, I assume you'll be operating "portable" rather than "mobile" (moving).

I assume you're interested primarily in HF, since VHF/UHF is line of sight which is problematic in remote areas. I also assume you're interested in DX AND want to work multiple bands AND would like omnidirectional low-angle radiation.

I've used a "St. Louis Vertical" http://www.fix.net/~jparker/slvt.html with good results. This was designed for QRP use by backpacking hams.

It probably costs about $50 to make, is omnidirectional, radiates well, is multi-band capable, and is quite portable. The classic ground plane setup is a bunch of wire radials positioned outwards fromt the base. You'll need an antenna tuner but you can get a good match with little RF losses on this setup.

I use 25 ft of aluminum screendoor material cut into 3 swaths as a groundplane on the roof of my fiberglass RV. This antenna is about 20 ft high and may be fit with a band-tunable (10m-40m or 10m-80m) professionally-made coil for use WITHOUT A TUNER BOX.
http://www.fix.net/~jparker/w6mma.htm

I've tried ALL KINDS of HF antennas for camping, from multi-band mobile antennas like from Hustler and the Pro-Am AB5Y, but they're mostly resistive "cloud-warmers". Hamsticks work great in my truck cab roof, but I can do a LOT better if I have the greater vertical clearance at a campsite. I've built helically-wound verticals but they're single-band. The helically-wound dipoles work great as directional dipoles, but again they're single-band and need to be turned.

So far my vote is for a well-built, tunable vertical that is portable and can be setup in 5 minutes!

Good luck.....Rudi - KF6RLQ
Damien D Keffyn wrote in message <8wKB3.6054$Ry6.8414@news.get2net.dk>...
Hi all, I suppose this is the best section to rate this problem.
I am going camping next week from Thursday to Monday, I will be using an Yaesu FT 100 & a Zetagi B300 Amplifier powered by a couple of car batteries.
I am just curious about the Antenna system I should use.
here are the choices I have;
1.. "Stationmaster" (10"-12" vertical) that's what we called them in Australia I don't know the term for them in Europe
2.. Discone
3.. Fritzel Long Wire approx 41 mtrs 21mtrs per side
----------(Balun) ----------
4.. Mobile antenna with various different tuned antennas
I will be camping beside a lake therefore can I use the lake as a groundplane?
Any other suggestions are welcome I would like to build up a decent Mobile system so please give me you imaginations.

Walt,
I've had mine for a bit over a year, and I like it. I also have the
ATAS-100 antenna that I use for mobile and base operations. As a package
deal, I thought then, and still think now, that it's the best going.

Brian

You are quite correct I will be operating "Portable" though I will not be transporting the station it will be a fixed campsite setup. I will however be operating mobile but only as a monitoring station, purely for listening pleasure and to test the new rig.

Rudi Wiedemann <wiedemann@home.com> wrote in message
news:WCQB3.7876$Vi5.90815@news1.frmt1.sfba.home.com...
If you're camping, I assume you'll be operating "portable" rather than "mobile" (moving).

I assume you're interested primarily in HF, since VHF/UHF is line of sight which is problematic in remote areas. I also assume you're interested in DX AND want to work multiple bands AND would like omnidirectional low-angle radiation.

I've used a "St. Louis Vertical" http://www.fix.net/~jparker/slvt.html with good results. This was designed for QRP use by backpacking hams.

It probably costs about $50 to make, is omnidirectional, radiates well, is multi-band capable, and is quite portable. The classic ground plane setup is a bunch of wire radials positioned outwards fromt the base. You'll need an antenna tuner but you can get a good match with little RF losses on this setup.

I use 25 ft of aluminum screendoor material cut into 3 swaths as a groundplane on the roof of my fiberglass RV. This antenna is about 20 ft high and may be fit with a band-tunable (10m-40m or 10m-80m) professionally-made coil for use WITHOUT A TUNER BOX.
http://www.fix.net/~jparker/w6mma.htm

I've tried ALL KINDS of HF antennas for camping, from multi-band mobile antennas like from Hustler and the Pro-Am AB5Y, but they're mostly resistive "cloud-warmers". Hamsticks work great in my truck cab roof, but I can do a LOT better if I have the greater vertical clearance at a campsite. I've built helically-wound verticals but they're single-band. The helically-wound dipoles work great as directional dipoles, but again they're single-band and need to be turned.

So far my vote is for a well-built, tunable vertical that is portable and can be setup in 5 minutes!

Good luck.....Rudi - KF6RLQ
Damien D Keffyn wrote in message <8wKB3.6054$Ry6.8414@news.get2net.dk>...
Hi all, I suppose this is the best section to rate this problem.
I am going camping next week from Thursday to Monday, I will be using an Yaesu FT 100 & a Zetagi B300 Amplifier powered by a couple of car batteries.
I am just curious about the Antenna system I should use.

here are the choices I have;
1.. "Stationmaster" (10"-12" vertical) that's what we called them in Australia I don't know the term for them in Europe
2.. Discone
3.. Fritzel Long Wire approx 41 mtrs 21mtrs per side
----------(Balun) ----------
4.. Mobile antenna with various different tuned antennas
I will be camping beside a lake therefore can I use the lake as a groundplane?
Any other suggestions are welcome I would like to build up a decent Mobile system so please give me you imaginations.

You need access to the Motorola RSS software - they will sell you a copy
but you maybe better to try and find someone locally who has it. The
cable is pretty simple and can be found on Batlabs website. It plugs
into the microphone socket.

yell if you need more help.

Here is one I found. Have not tried it. Good luck.

Boykin, KDF4AJJ

--

9-5-97 (modified 12-21-98)

SUBJECT: Expanded Frequency Coverage on TX/RX for the Icom IC-W32A/E

NOTICE: We can not guarantee specifications beyond the amateur bands.
Not responsible for any damages incurred in attempting this
proceedure. This modification may void all warranties.

1. Remove the battery.

2. Remove the 4 screws holding the rear cover and the 2 lower screws
holding the shield in place in the battery compartment. Note: The
shield screws are near the bottom of the unit.

3. Carefully lift the rear cover with the battery comparment shield
away from the front cover.

4. The front and rear sections are connected together with a flex
strip connector. Carefully lay the rear section aside by lifting upward,
turning and laying the rear section over away from the front cover
leaving the flex strip connected. Optionally you may disconnect the flex
strip from the front section by carefully working the restraining bar
forward, once it is loose, the ribbon can be gently pulled out.

5. With the front cover section horizontallyin front of you, antenna
connector to your left, locate the notch at the right side of the exposed
PC board. You will be applying this mod to an area of the Loginc Unit
Board. Locate the three, 3 terminal diodes near the lower corner of the
notch. Two are in line from left to right (D524,D525) with the third below
the diode (D525) to the right. This last diode (the one below the right one)
is diode D523. Very carefully remove D523. Use caution!!

6. Reassemble the radio in reverse order.

7. Perform a system reset by holding down the SQL (on the side) + VFO + MR
while turning the radio on. Note that all memories will be erased, so write
down anything you want to save or dump it to your PC using cloning software
BEFORE doing this step.

8. Reprogram the unit.

VHF coverage will be from 140 to 170 (plus or minus a bit) on Tx/RX
UHF coverage will be from 430 to 470 (plus or minus a bit) on TX/RX

On my unit (Serial # >08060) I get Tx/Rx from 400 to 500 on UHF and
from 130 to 199 on VHF

Enjoy

Subject: ICW32A Mod Update... Date: Wed, 17 Feb 1999 10:49:55 -0800

SUBJECT: Expanded Frequency Coverage on TX/RX for the ICOM IC-W32A/E

NOTICE: We can not guarantee specifications beyond the amateur bands.
Not responsible for any damages incurred in attempting this procedure.
This modification may void all warranties.

1. Remove the battery.

2. Remove the 6 screws holding the shield in place in the battery
compartment.

3. Carefully lift the battery compartment shield out of the radio.

4. With the unit horizontally in front of you, antenna connector to
your left/top, locate the notch at the right side of the exposed PC
board. You will be applying the mod to this area of the Logic Unit
Board.

5. Locate the three black diodes (3 terminal leads) near the lower
corner of the notch. Two are in line from left to right (D524,D525)
with the third one below the right diode (D525). This last diode (the
one below the right one) is diode D523.

6. Very carefully remove D523. Use caution!! Un-solder the top lead
while pushing the diode up with a small plastic screwdriver. Once the
top lead is free, it is too tight to get at the other two leads, bend
the diode back and forth a few times until the bottom two lead break
free.

7. Reassemble the radio in reverse order.

8. Perform a system reset by holding down the SQL (on the side) + VFO +
MR while turning the radio on. Note that all memories will be erased,
so write down anything you want to save or dump it to your PC using
cloning software BEFORE doing this step.

9. Reprogram the unit.

VHF coverage will be 136 to 174 MHz on TX and RX UHF coverage will be
400 to 470 MHz on TX and RX

FRS Band: 14 Channels = 7 at 462.### and 7 at 467.### MHz. If TXing on
the FRS Band, make sure you set the unit to the LOW = 500 mw power
setting.

5908. FS: racks, raised floor, old test equipment

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-09 00:00:00 UTC
From: matthews@wfu.edu
Message-ID: <7r99ar$pmq@f1n1.spenet.wfu.edu>
Source record: 98809

My department is having spring cleaning late this year.

We have several items ranging from nearly 200 square feet
of good quality raised access flooring, to heavy duty relay racks,
to a collection of old test equipment (General Radio, etc.)

Some of the relay racks housed Convex C-1 computers and include
hefty power supplies.

Visit

http://www.wfu.edu/~matthews/rummage/rummage.html

and let me know if anything looks interesting.

We even have a 500 watt RF induction heater.

The RF induction heaters and relay racks probably need to
be picked up here, given the size and weight.

Source record: 98816

Hi and thanks for reading this.

I just got a Kenwood TS-450 and I do not have the owners manual. I need to know what pins (I think on the 8 pin din remote connector) activate the keying circut for a linear.
Someone told me it was pin 2 and 4 , 2 being ground and 4 having low voltage on it. My contact was not positiveon this info. And if so how do I identiy pin 1 vs pin 8, is it marked ? Also is there a switch or a jumper I have to put in or throw to activate a relay.

Thanks in Advance
Bill, WR2M

Here is the sequence to activate the linear keying circuit in the TS450.....

Press and hold the LSB/USB key then turn the power on
Turn the M.CH/VFO.CH control to select menu #16
Press the UP key (band key) to turn the display from 'off' to 'on'
The linear keying is now activated

You'll hear a click now each time you key the rig indicating it is on.
Sorry I can't help with the remote plug pinout. AES does sell the complete
remote cable with ALC plug and keying relay plug for around $25

Message-ID: <uJWB3.1043$Ym5.28329@iad-read.news.verio.net>
Source record: 98818
Cross-posted to: alt.ham-radio.slowscan,alt.radio.amateur,rec.radio.amateur.digital,rec.radio.amateur.equipment

Hi Rich!

Have the Pasokon, and it is a fine SSTV system.

Couple of things you might try:

1. Check the board and see which interrupt it is set to.
2. Check the computer system to see if any other hardware is using the same interrupt. If so, change the Pasokon to another interrupt.

As I recall, Pasokon cannot share interrupts with other hardware. Mine is set up to interrupt 10 at the present time in a Pentium 200 running W95. I have it set up to reboot into DOS and the Pasokon card works fine this way.

Hope this helps. Let me know if I can be of any further help.

Yeah... right.

What have we been sniffing.

If I spent $1300 on an FT-100 (which I did) I certainly wouldn't sell it for $250... working or not. Especially if it was still covered by the warranty. I just see this as a way for someone to get an FT-100 for a really cheap price and then have Yaesu fix it up for them and then sell it for a substantial mark-up. Either that or they're too cheap to go out and buy one at full price.

I'm Michael Tuck and that's my perspective.

5924. Cobra Curve Tracer ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-09 00:00:00 UTC
From: Jeff <scanner@accessus.net>
Message-ID: <37D89290.2CD7A8E9@accessus.net>
Source record: 98825

Hello,
Has anyone heard of a Cobra Curve Tracer ? Model CT-751
It is a small box with 3 switches- on/off, gain-junction-leakage,
calibrate,b-e, b-c
a socket for a transister under test, and 3 leads red , black, yellow.
and a place to hook it to the vert & horz. on a scope.
It says it was made in Polaris ,NY which I can't find on any map.
Does anyone know of this device . I have hooked it up and it sames to
work fine but I would like more info on it.
Also as if you couldn't tell it is rather old.
I would be greatful for any help.
Thank you.
Jeff

5926. HELP! ICOM 751A Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-09 00:00:00 UTC
From: Michael Ruzinsky <maruzin@earthlink.net>
Message-ID: <7r9ukk$n9k$1@holly.prod.itd.earthlink.net>
Source record: 98827

Has anyone experienced this? My ICOM 751A will not work with a tuner. I can sit it side by side with another 751A, use it's power supply, tuner, antenna, and ground system. The other one will tune up just fine, mine won't.

Now here is the strange bit. Works fine with a dummy load. Works fine on a mono band antenna. It has been serviced by ICOM twice in the last two months. They have aligned the SWR and APC circuits. It is getting better, but something still seems to be wrong and the shipping costs are killing me.

Any suggestions?

Mike Ruzinsky

Only half right!

I just want one or two very cheap.

I have never sold a single radio that I have purchased since I got my ticket nearly 10 years ago. Just ask the XYL about that, and you will get at least an earful.

Actually some of the bad stuff on the newsgroups led me to believe that some individuals were likely to do this. I have since found out from some FT 100 owners that a lot of the bad things said were from some folks just trashing the radio. They were most likely not actual owners.

I have made this post a couple of times and this is first response I have received from it.

I actually feel now that this radio is no different than anyother and is worth the price.

Source record: 98842

I have some modern Electronics Fundamental Text books
available. All are currently in use at various colleges.
They are all Associate Degree (Technician) level.

Basic Electronics by Grob - 8th edition - 1997 - $ 30

Electronic Principles by Malvino - 6th edition - 1999 - $ 30

Electric Circuit Fundamentals and Electronics Fundamentals
3rd edition by Floyd - 1995 - $ 30

Electronic Devices and Circuits by Hassul and Zimmerman -
Conventional Flow version - includes student workbook
I think this is a 1998 copyright, but it is still in shrink-wrap,
and I do not want to unwrap it to find out for sure. $ 30

Understanding Data Communications by Friend
The title says it all! $ 15

Understanding Communications Systems by Cannon
This one covers all sorts of communication systems -- not
just the data communications like the one above. $ 15

Modern Electronic Communications by Miller
Communications techniques, modulation, TV, antennas, wave propagation,
waveguides, fiber optics, noise,
2nd edition - 1983 - $ 15
3rd edition - 1988 - $ 18
4th edition - 1993 - $25

Intro to Digital Data Communications by Stein
Data formats, UARTs, RS-232, codes, telephone
systems, DTE/DCE interfaces, error detection, protocols,
multiplexing, packet switching, LANs $ 22

Digital Electronics by Uffenbeck
Covers from number systems to shift registers to Programmable
devices to interfacing $ 28

Electricity - Principles and Applications by Fowler
Part of McGraw Hill's "Basic Skills in Electricity and Electronics"
group of texts. Mainly theory, in easy to understand
explanations. $ 20

Prices do not include shipping from Florida. All books are
new. By the way, most of these are large, heavy books,
weighing about 6 pounds each, but can be shipped "Book
Rate" fairly inexpensively.

Thanks.

I have had my 2600 for about two weeks now and still in the honey moon stage. It's first new 2meter rig I have aquired in almost 25 years. It is very simple and no non-sence, thats what I wanted. It uses extensive menus rather than discrete buttons, once every thing is set you don't need to mess with it again. Yaesu uses its brother (identical except no freq select knob) in the commercial two way market. The only bell and whisel I was looking for was tone encode and the weather frequencys. I have not had any of the problems describes earler. It was a selection between the IC-2100 and the FT-2600. The 2600 seemed to be more solid and less busy, although the 2100 is probably a very good rig also. Two very neet functions are the tone scan to identify the correct tone for a repeater and active frequency scan this finds the first 50 freq in use and puts them in memory seperit from the 170 some odd memorys. Good luck on your selection. By the way I have nothing to do with Yaesu or a dealer it's just a good rig and cheap.

tnx

Cross-posted to: alt.ham-radio.slowscan,alt.radio.amateur,rec.radio.amateur.digital,rec.radio.amateur.equipment

I recently bought a used Pasokon SSTV board with ver/s. 2.0, 3.0 and the
3.1 upgrade. I have installed it and

I am having problems with the setup. It seems to start ok. But it
wont generate interrupts.
I get the following error and I found the following in the docs:
4. Click on the "Recv" button or press Enter key to start
receiving. If you get the "Interface not generating
interrupt ..." message, call us for assistance.
Don't change the I/O address jumper in this case; you
wouldn't get this far if the basic I/O functions were not
working properly.

I have e-mail JohnL@world.std.com with no reply as yet. Maybe he does
not read his email very often. I have offered to pay for registration to
get some support and not feel like a bother or freeloader when I call.
But I really want to get this going.
Is there anybody who know how to help or has run into this? Please email
me.

National NC-46 Receiver, Excellent condition inside, Repainted cabinet is so..so,
with manual $100.00 Obo plus shipping

SBE 6 tube linear base amplifier, uses six 6LQ6 tubes, 15-80 meters
Easy 600 watts peak output $250.00 plus shipping SOLD

Electrovoice Slim crystal desk Mic with EV Base $75.00

Shure 522 Dynamic desk mic. Like new $60.00

Cobra 148 GTL with Galaxy Freq. counter and Astatic 575M6 amplified hand mic
extra freqs, Modulator dial a watt $200.00

Tram Diamond 60, 23 channel mobile CB, $50.00

SBE Sidebander II, 23 channel mobile CB with stock mic $30.00

Johnson Viking Mdl 1 AM/CW transmitter, plate modulated 6146's
good condition with manual $150.00 plus shipping, pick up in So. Cal. $150.00

Siltronics Mdl 90 VFO, -6 model, very good condition $60.00 Plus shipping

Siltronics, 1011C transceiver with manual, Not tested, receives $100.00 Plus shipping

Yaesu FT101EE, great condition, original NEC tubes working to full output,
Stock mic, AC/DC cord, Manual $320.00 Plus shipping

Gonset GSB-101 amplifier, Uses three 811 tubes, Clean condition,
with manual $225.00 Pick up in SO. Cal

Home Brew 10 meter amplifier, Uses three 24 volt version of the 6146 tube, Made from a military PA deck, Homebrew supply, open chassis construction, RF sensing, Meter, Bias adjust, plate/load controls etc. $100.00 Plus shipping

Amplifier, 10 meter, General Linear System PA deck using two 6LQ6s driving one 3-500Z, This is a 2 Peice amplifier mounted in what looks like a 3 drawer night stand, I call it the "Furniture Amplifier" Very unique $350.00 Pick up in So. Cal.

Tram D201, Good condition, Great AM, weak SSB, Maybe a tube, Manual $200.00

McCormick Commercial mobile radio, programmed with 16 packet frequencies, 40 watts output, great receive, AEA PK88 with manual, Both $170.00 plus shipping

6LQ6 Pulls, good output $20.00 Each

Abandoned Browning MKIII project, 2 receivers, 2 transmitters, One receiver works great, the other fair, New Nuvistors in both receivers, was in the process of making one good transmitter from the two, One transmitter missing knobs and the eagle. SAMs Service Manual, Pick up in So. Ca. area $300.00

All Items shipped upon receipt of MO, Personal checks will need to clear before shippment. References available, Delivered UPS ground or Priority mail.
Pics available upon request

5950. PRODIGY BUSY SIGNALS (off topic)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-09 00:00:00 UTC
From: PDWK66A@prodigy.com
Message-ID: <7r7dii$49va$1@newssvr03-int.news.prodigy.com>
Source record: 98861

PRODIGY BUSY SIGNALS (off topic)

This is a little off topic, but since we are all internet users, I thought I would let you know of a problem with PRODIGY INTERNET.

Prodigy has OVERSOLD its ability to provide service to customers in a dozen or more states. (To get a listing, call 800/213-0992 and select option 3).

As a result, current users receive endless BUSY SIGNALS when attempting to connect and bogus error messages if they are lucky enough to get through.

You would think Prodigy would have learned something from the AOL debacle of a few years ago, but apparently the quest for the dollar cancels any moral obligation to take care of current customers.

So, if you were thinking of switching to Prodigy, THINK AGAIN.

JOHN

So does this mean that setting up a 440 repeater, with 5MHz
split would be at least as simple? Would using collinear
vertical antennas, along with the shorter wavelength,
reduce the required vertical separation as well?

Is it possible that this could even be done with amateur
gear, if you somehow kept the duty cycle down?

Try the radio on a dummy load and eliminate the possibility of High SWR. The TS430 really folds back its power in high SWR situations. The protection circuit may just be doing it's job.

This TR4C Station is in very good looking and good working condition.
All original and on the air. 8.5 out of 10. Comes with a good copy of
the manual and a handmic. The receiver is very sensitive on all the
bands and the transmitter sounds good using three 6JB6s in the output.
Just plug in the mic and you are on the air with full output 80 through
10. $295.
I have JPGs available if interested. 73 Chris VE3NGW/W4 Florida

Hi all, I suppose this is the best section to rate this problem.
I am going camping next week from Thursday to Monday, I will be using an Yaesu FT 100 & a Zetagi B300 Amplifier powered by a couple of car batteries.
I am just curious about the Antenna system I should use.
here are the choices I have;
1.. "Stationmaster" (10"-12" vertical) that's what we called them in Australia I don't know the term for them in Europe
2.. Discone
3.. Fritzel Long Wire approx 41 mtrs 21mtrs per side
----------(Balun) ----------
4.. Mobile antenna with various different tuned antennas
I will be camping beside a lake therefore can I use the lake as a groundplane?
Any other suggestions are welcome I would like to build up a decent Mobile system so please give me you imaginations.

Hello;

Still need a few more Motorola
Maxar 50 UHF, PL type radios. With
or with out the microphone, power cords
(accessories). Please dig around and
see if you have any of these older 1 or
2 channel crystal, compact UHF mobiles
in your, junk radio box.

Poor cosmetics ok, but it MUST BE
WORKING, must be UHF and PLEASE,
it MUST BE A MAXAR 50!!

If at all possible please DO NOT
POST REPLIES here on the N.G. Contact
me PRIVATELY by E-Mail, or telephone
with any information you have.

Thanks again to all that have
supplied UHF Maxar 50's thus far.

>> somehow related.

No, this is caused by the potting compound on the main PLL. It seems as it aged the synthetic rubber compound absorbes moisture from the air.

The seller may have not known about the problem. If the radio was always plugged in and in a warm, dry place, it would not have the problem. When left to sit for a few weeks, or used in a damp place, the problem would occur.

BTW, there is no VFO in this set. The VFO function is simulated by a microprocessor and a phase-locked-loop (PLL) synthesizer.

If you are really good at these things, you can find the main PLL, remove the soldered on shields, and carefully pick away at the rubber. When you have it all removed, tune the PLL oscilator to 15mHz, resolder the shields, and put it back.

This is assuming that you neither destroy anything in the process, and nothing has coroded too badly to still function properly. Some people squirt hot glue or other poting compounds in it, IMHO it is not really necessary.

As for the battery, almost any lithium coin cell will do. It is under the front panel on top of the EPROM chip.

Geoff.

Hi all

to those who have read this in other place I appologise. I am interested in buying and building the tentec 2 to 6 meter transverter. I am sure there must be a few out there who have done this.

How well does it work
how bad is intermod
how selective is it
how easy/difficult is it for mear mortals to build
ease of installation

Any problems?
any operational problems
will I come over TV's, Radio's , Lightbulbs and Aunt Martha's Dentures?

To the two gents who have already send me emails thanks,

I d not wish to hear from Hams who work for tentec or their relatives as they have a vested interest.

73

chris

For free plans and info on solar oven's water and purifiers, that actually work, see<http://www.accessone.com/~sbcn/index.htm>

Almost any lithium coin cell will NOT do. The one in the 5000 is a
rechargeable lithium battery. Most lithium batteries I am aware of are
not rechargeable.

>compound problem. It may be the same...

That would be my R-5000 that I sent to Clif to fix. It behaved EXACTLY
as you describe. He fixed the problem very nicely and the receiver is
back up to the performance level it had when brand new. It's a real
bummer when you buy a radio that has a problem that you were not
informed of, but I can tell you that if you want to keep the rx and
have a fine piece of gear, then send it to Clif for service....I
highly reccomend him!

BTW...this is an unsolicited testimonial from a real happy customer!

JEEZE Chris - I'll sure be glad when you get that thing sold!

By the way out here on the left coast, I bought that same power supply AND the HW12A that went with it - including manuals, desk mike and speaker for *$80*... Could it be you've overpriced yours? And yeah, mine is perfect in appearance and operation!

Howmuch will this radio go for. In Geat Britian the price is expected to be 2200 Britush pounds. My guess is it will compete with the Yaesu Ft-1000 MP and that foes for $ 2700. I am cureous if the Icom 756 Pro has any optional filters if is it like the Kenwood TS-870 which doesn't allow optional filters.I also wounder if the Scope is faster than the original.

Hi Will -
Thank you for your reply.
I have taken time to try all the interrupts. I am running Win 98 and have looked in the system to see what IRQ's are taken. On some of the interrupts the software just craps out and dumps back to dos. On the rest the software acts like it wants to run but If I press the A button or the receive button I get the error "Interface can not generate IRQ 15" or what ever other IRQ it is set to.
For years Iv wanted the Pasokon system. I hate to toss it in the garbage.

I want to trade my ts-450s-at for a ts940s. preferedly with the antenna tuner and vs-1 but doesn't have to be. I will trade it with cash the 450 is in grate condition and I would like the 940 to be also. It must work grate and I hope it has never had any major problems. if you can help I have always wanted a 940. I might considder a 950 but it would have to be verry inexpensive. if you can help me email direct to racerjm3@aol.com thanks

6004. how to improve swr btween xcvr and SB220 amp?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-10 00:00:00 UTC
From: k7jy@aol.com
Message-ID: <19990910104923.00589.00006021@ng-fn1.aol.com>
Source record: 98715

I've got an Ft1000MP and an SB220 amp. The swr between the two is 1.8/1 which seems a bit high to me. I'm wondering if there is an adjustment in the SB 220 that can be made to bring it closer to a 50 ohm load for the xcvr, giving me a better swr. It is not a big deal, but shouldn't the match between the two ideally be 1.0/1? Any advice would be much appreciated. Tnx and 73, John, K7JY, Seattle.
P.S. And yes I could put a tuner between the two, but that is not my question. Tnx!

I need some suggestions on how to solve a
receiver overload prob. I have a Kenwood TS-450
being fed with a 200 foot long wire antenna.
There is a 50kw AM radio station a few miles from
my qth that is causing major grief. During night
time, the station causes interference over the
entire freq. range (1-30 mhz). Grounding the rig
has helped some, but not near enough.
Any ideas on things to try to solve the problem?

It is not the program/hardware that does not share IRQ's, it is WIN9x that is causing the problems. You need to boot command prompt or try an OS that does not get upset about IRQ shares. I use OS2 on my HAM CPU because it shared IRQ's five years ago with no hassels and still does today, NT is almost as good on sharing and WINdoze, which is very poor at this, is no better about it now than 5 years ago, it may be worse

6013. Bencher Paddle Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-10 00:00:00 UTC
From: Bob Sikes <rwsikes@mediaone.net>
Message-ID: <zkcC3.3842$PF3.231337@ndnws01.ne.mediaone.net>
Source record: 98724

I received today a Bencher BY-2 key that I purchased used (EBay). It has a problem in that the left paddle is so far out of allignment it bumps into the right paddle (which seems fine). With a bit more inspection, It seems that the metal arm of the left and right paddles are not identical. It looks like the right paddle might be bent out of shape and is causing the problem.

My question is, should the paddle arms be identical? I guessing yes, but I'd like to know for sure before I try to straighten the arm.

TIA

Bob

I like it, although others have expressed their dislike of it.
If you combine a FT-847 with the ATAS, ir makes a real nice package. As a
mobile setup, it's big, but has worked extreamly well for me. As a base,
I've worked 40m through 440, all over the place, so it works well there too.
Just keep in mind, as far as I have read the only 2 rigs that will run this
antenna are the FT-100 and the FT-847.

Well, stranger things have happened. It would be interesting to see if anyone is willing to do this. I know I'm sending mine back to Yaesu but only to have the Noise Blanker looked at. I've tried everything to eliminate the noise I'm hearing from the fuel pump on the truck and I found out that my old Uniden HR-2510 could filter the noise out completely so the problem wasn't entirely with the truck. Other than that I've had no problems with the radio... that doesn't mean I won't though I suppose. I guess I'll find out....

They are identical,
the bend from finger piece to screw hole is 90 degrees and from screw hole to contact is 45 degrees.
maybe this will help tell which one is bent.
probably thanks to the good folks at UPS.

do support the metal because the plastic finger piece will break at the first hole if you don't.
good luck with repairs and congradulations on purchasing a fine set of paddles.

Source record: 98738

Hi All,

In am looking for someone who can repair my low band syntor X radio. As it stands now, it appears to transmit, however, the recieved audio is only slightly audible when you press your ear to the speaker. There is constant squelch which appears to be uneffected by the squelch contral, however, the volume control does seem to make the squelch noise a little louder, but still not loud enough to hear without puting your ear to the radio.

Upon inspection, it appears as if a speaker wire some how shorted to one of the solder pads in the control head.

If anyone can help me out, please let me know. I am willing to pay or trade for the repairs.

Please E-Mail all responses.

Thanx
Mike

6039. WTB: DEAD or DAMAGED HTX-100

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-10 00:00:00 UTC
From: Michael <me_hamman@yahoo.com>
Message-ID: <7rcdqgmas1@news1.fast.net>
Source record: 98750

I've got a HTX-100 that was internally mangled by some !@$%&* individual.
I've been able to get the PLL board running again. The rig receives, but the
TX is dead.
It may be from the fact that it now has parts from a 2510 in the TX path.
The individual DESTROYED most of the ferrite cores and coils within the TX
path. RS gave up stocking parts long ago so.......does anyone have one with
a dead PLL board or totally trashed face / case they want to get rid of?????

Thanks
Michael

If somebody was willing, I would have some heavy guilt in taking it. Though it probably would not last too long.

I heard that the noise blanker on the FT-100 is among if not the best out there, so it must be either bad or some sort of strange problem. I have a HR-2600 now in the car and it is amazing how well the NB works on it. I do have to admit, and this probably will bring some heat from Ford owners, the 2600 does clatter with ignition noise and etc when some older Fords pass by on the road.

6041. Kenwood Parts Help!!! PS-430 Power Supply case

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-10 00:00:00 UTC
From: Alan Wolke <w2aew@qsl.net>
Message-ID: <37D9B8BC.278B@qsl.net>
Source record: 98752
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hello Everyone,

I hope that you can help me...

I'm on a quest for some discontinued Kenwood parts. I have a PS-430 power supply in excellent working condition, but the case is in rough shape. I am looking for the plastic front panel (A20-2461-13), and the top and bottom case halves (A01-0937-02 and A01-0938-12).

Kenwood has discontinued these parts, and both the east and west coast parts distributors have no more stock. So, I am beginning to seek out anyone I can find to see if someone may have these parts. I'd be interested in new, or Very Good to Excellent Used condition. I've also check with many of shops that I have found on the web that repair Kenwood equipment. So far, no luck...

Would you happen to have, or know where to look for, these parts? If so, please email me at w2aew@qsl.net

Thanks in advance, and 73,
Alan

6042. Re: Kenwood TS-930S MRF-422 Finals

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-10 00:00:00 UTC
From: Mike <ma@lightlink.com>
Message-ID: <37D9C45B.F4E6C64B@lightlink.com>
Source record: 98753

My 930S is still going very strong. The finals show 115 watts out after all these years, clear as a bell with no alignment in at least the last 8 years. It's an absolutely wonderful radio to operate, I love it, fairly simple, great audio, good receive front end, just a few minor spurs here and there. Nicest radio overall for beginners to low-experts I've operated overall, and the list includes Omni VI's and Yaesu 1000MPs (both of which are better radios in several regards but they are 10 and 15 years newer respectively; the TenTec has a lower noise floor and the 1000MP many more features but at a price in complexity). Does have Kenwood's typical problem with nearby video monitors however; you can put a grounded screen over the monitor to reduce interference. If only they'd protected the PLLs better...

Mine has definately not been babied. I run all modes on the radio except RTTY, but I do run PSK which is pretty hard on the finals. I do cut to 50 watts out when running PSK per the recommendation on running constant-load modes.

I'm the third owner we know of; I've replaced the digital board and that's it. The digital unit is the real weakness of the radio, the original digital units were washed with corrosive solder wash and the thru-hole solders corrode over time; replace it with a PIEXX unit if and when it goes, $300 ugh! but same price as Kenwood new stock.

So don't worry about the finals. Check to see if the digital board has been replaced, and if not that's where your probable troubles are hiding. And they're more expensive at $300 per than $100/set for 422s, but a LOT easier to replace. I did it no sweat and at the time I was NOT an electronics guy at all. Now, of course, I'm modding an AL-84 for a set of Svetlana #L-509s, so the bug has bit hard. Trading a 530 for a 930 probably means the 930 needs a new digital board. A 530 runs about $450 and a 930 runs about $650. Hmmm! ;)))) I do have a 520 so I understand the allure of tubes and simplicity...

Any questions feel free to drop me a line direct.

73, Mike KC2EAL

6043. Yaesu FT-2200 Question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-10 00:00:00 UTC
From: Jim Rizos <jrizos@nac.net>
Message-ID: <37D9C9E4.63D55D94@nac.net>
Source record: 98754

Hi guys-
I bought a used Yaesu FT-2200 and was told it is 25 watts. The previous owner said he replaced the power amp module. Now, everything I have read says that this rig is a 50 watt unit. The replaced power amp is a Toshiba S-AV7 which works fine. The diagram states that it should be something completely different though. Does anyone own a 25 watt version of this radio? I'd really like to be getting 50 watts out.
Thanks and 73-

Greg KC2EJB

6044. Cobra Curve Tracer?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-10 00:00:00 UTC

Hello,
Has anyone heard of a Cobra Curve Tracer ? Model CT-751
It is a small box with 3 switches- on/off, gain-junction-leakage,
calibrate,b-e, b-c
a socket for a transister under test, and 3 leads red , black, yellow.
and a place to hook it to the vert & horz. on a scope.
It says it was made in Polaris ,NY which I can't find on any map.
Does anyone know of this device . I have hooked it up and it sames to
work fine but I would like more info on it.
Also as if you couldn't tell it is rather old.
I would be greatful for any help.
Thank you.
Jeff

>THEM LET ME KNOW YOU CAN HAVE THEN FOR THE COST OF THE SHIPPING.
>
> GUS.S

After seeing how complicated the wiring set-up is for the fuel pump I'm
going to hold off on that. I found out the part of the problem lies with
the radio and it's inability to filter out the noise. My Uniden HR-2510 has
no problem filtering it out.

But thank you for the reply.

I'd suggest a shunt regulator.
(An overgrown Zener!)

Make it with a power PNP and a zener from base to ground.
It will dissipate none of your hard earned power until the battery (ies)

voltage rises at full charge.

I used to do this, but now I provide an unlimited sink for solar power.
(The house power!)

I had one for a while and found it to be a fairly nice radio.
My complaint was with the "wide band receive coverage". It does not
give total coverage from 225-400 mhz.

Thats why I got rid of it.

Good luck,
Ed

Hello Everyone,

I have the following for sale. All items are in very good condition or better unless otherwise indicated. I would like to sell the indicated packages as packages unless I get a great offer otherwise. Below prices include CONUS UPS shipping. Payment by US Postal Money Order ONLY, and prepaid. NO C.O.D.'s, etc. Please e-mail directly to n3fvg@worldlynx.net if interested.

ICOM HF Mobile Package - IC-706 HF/6M/2M mobile with Icom AT-160 automatic antenna tuner, OPC-599 acc cable, Comet CF-530 HF/VHF duplexer and all related standard accessories, manuals and boxes.....$ 950.00

ICOM IC-03AT 220 Mhz. HT package - IC-03AT with BC-35 desktop charger, brand new BP-7S battery, BP-8S battery, IC-DC1 Mobile Adapter, Icom speaker mic, manuals, standard accessories and boxes.....$ 325.00

STANDARD C228A 2M/220 HT with CNB-153 battery pack, rubber ducky antenna and plug in charger ONLY.....$ 300.00

BEARCAT BC-3000XLT handheld scanner, 25mhz.- 1.3 ghz. (less cellular but will receive "images), rubber ducky, ac adapter and charger, battery pack just rebuilt. Includes copy of instruction manual.....$ 225.00

RADIO SHACK PRO-62 handheld scanner, 30mhz.- 960 mhz. (less cellular and 220 Mhz. band), with optional leather carry case, rubber ducky, alkaline batteries, and standard accessories in box. Only programmed, then put back in box, never used.....$ 150.00

MFJ-989C Versa Tuner V HF antenna tuner. No original box or manual but used very little. In excellent condition.....$ 250.00

KENWOOD MC-60A amplified microphone. In box, excellent condition, no manual.....$ 100.00

KENWOOD UT-28S 10M unit for TM-641/741/642/742 mobiles. Brand new in box, never used.....$ 260.00

(2) KENWOOD MC-44 microphones, 8 pin din plug, brand new in boxes, never used.....$ 25.00 each

KENWOOD MC-52DM microphone, 8 pin din, back-lit ttp, brand new in original wrapper, never used.....$ 30.00

DIAMOND MX-214 Duplexer (2M/220).....$ 45.00

MOTOROLA Montana 33.6 PCMCIA Cellular 33.6 Modem/Fax with cable for connection to Motorola Cellular Phone (Tenatively Sold).....$ 25.00

Unknown brand HF SWR/Wattmeter, German mfg.?, says it handles 1KW but I wouldn't try it. Probably handles 300 watts, in box.....$ 25.00

(4) JOBCOM UHF handheld portables, 2 channel, 2W, 1 channel installed, 3 on same frequency, 1 on different frequency. Easily re-crystalled. With rubber duckies and plug in chargers.....$ 200.00 for set

MAXON VHF-hi , model CP-0510 handheld portable, 4 channel - 1 installed, with drop in charger.....$ 50.00

TERMS: PREPAID only by US Postal Money Order. Prices include CONUS UPS ground shipping.

6065. Astron vs Triplite. Which is the better supply?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-11 00:00:00 UTC
From: PCG #1 <adm@aol.com>
Message-ID: <08AC3.1260$z4.53419@petpeeve.ziplink.net>
Source record: 98650

I am about to purchase a 35 amp, 13.8 V DC powersupply. The two major manufacturers seem to be Astron and Triplite.

Does anyone have opinions backed up by evidence as to which powersupply is better? Which has the better design? Which has the better set of bells and whistles? Finally, which one is of higher quality?

Thanks

Chris

Chris

I have both supplies and they both work well. When I received the
Tripplite supply the thing I noticed most was the it wasn't as noisy
as the Astron. There is considerably more 60 Hz noise (acoustically
emitted) from my old RS-35M than from the new PR-40. That is about
the only difference I have noticed.

I have a set of QST on CD ROM. It is an excellent tool, but suffers from, what I think is, a poor user interface.

Has anyone found a better way to use the information on these disks with an alternate front-end?

I needed some parts some time back myself. Since MFJ purchased Hygain parts
are hard to come by while they are going though the transition..

You can try the Rotor Dr. (search on the web) If he doesn't have it, then look
to purchase a non-working spare. I look for them all the time for parts too.

Good Luck..
Great Rotor, just hard to find parts sometimes..

My Astron RS35M (3 yrs old) has been as quiet as a mouse. No complaints and
it powers a TS450S, HTX-212, and a couple power meters. Never a problem.
One note of caution. I originally had the RS20M on the TS450S and one day
while transmitting it up and quit. Astron fixed it free under warranty but
they mentioned it is at it's limit with the TS450 as a load. I know some
have used that PS with an HF rig and no trouble ...I am just relating my
experience and what the manufacturer told me. Again...no trouble at all
with the RS35M.

I've had both brands at one time or another. Heck, they are both just
about the same when it comes to reliability. Just figure out what
features you need and look for the best price between the two.

>what is a gem of a "oldie but a goodie" HF rig?
>
>There just isn't much info out there for older ICOM, YAESU OR KENWOOD rigs...

I am interested in a good transceiver for a novice operator (me). I thought about getting a Kenwood TS-520, but a friend suggested spending a little more money and getting a Kenwood TS-430, 440, or even a 450 instead so I could also listen to other than the ham bands. How do these other radios fit in with the "oldie but goodies" that have been talked about? If I decided on spending a little more, are there features that would be important to consider in deciding which of the 430, 440, or 450 I should more strongly consider (other than the overall condition of the rig)? Thanks in advance for any light someone can shed on this.

Hi Fellas;
I have for SALE:
Icom IC-730 Transceiver, covers 80 to 10 meters, 100 watts out on AM, CW, SSB.
The 28.000 postion is set-up for 11 meters, from 27.400 to 27.700mhz tested in
a dummy load.
All seems to work but some bands seem like theres no receive, 28.000 is fine
however and 100 watts out on all bands.
Have Mike, Manual, original box but no power cord, I used my Kenwood cord on
it!
Price is $150+ ups
Last one sold for $375 on Ebay.

Mike,
I bought my TS-930SAT in 1988 and have been busting DX pileups and contesting with it ever since. I also run RTTY from time ot time. Mine has NEVER failed to perform 100% ,in any mode, with the original final tranziggers. I remember in '88 that these finals were not any cheaper so I wouldn't worry too much. Just use common sense and a tuned antenna (or built in tuner). Its a better rig than the TS-940 ever was.

Red.

New QTH selling extra stuff ... everything includes basic shipping to conus (continental US). USPS MO preferred.

1. Kenwood PS-33 13.8v 20.5amp DC power supply in original box with manual. Real nice (came with my TS-690S but I need the cash more than I do matching components). Asking $125.

2. Kenwood DSP-100 w/manual in real nice shape. Asking $350.

3. Kenwood 2m mobile TR-7400A in original box w/manual and bracket (no mic). 5/25w, tone board. Nice condition. Asking $125.

4. Armaco M131 green w/chrome face bullet-shaped mic head. $30.

5. H-113U 600 ohm mil surplus headset by Audiosears. $20.

6. Polyphaser Lightning protectors (as new)

2 each IS-50UX-C1 (375w 50-220, 125w 220-700, 50w 700-1000mHZ)

1 each IS-B50-LN (375w 125-220, 125w 220-700, 50w 700-1000mHZ)

Details: http://www.polyphaser.com/ $125. for all three.

7. Nogatech Conference card. Adds Video & Audio inputs to your laptop via PCMCIA Card. Great for video-conferencing or free long-distance calls via the Internet, or for presentations. As-new. $125.
Details: http://www.nogatech.com/html/conferencecard.html

Good luck. I bought one of the parallel-paddles key kits at Dayton
about 5 years ago, and it's by far the best key I've used in 26 years of
CW.

I have the Astron SS-30M (version with meters) and the spec's are 25 amps continuos and 30 amps intermittent. The power supply has two 1/4-20 bolts sticking out the back right hand corner for power connections. The power supply is very light weight, small and there is no RFI problems as long as your radio is one foot or more away from the cabinet. This supply works fine with my Yaesu FT-847. I paid $125 for one at Dayton last May.

I have a Chronar Model CT1-3A panel. It has ratings of:

W. Peak 12.0w
Vspec 14.5v
Voc 22.5v
Isc 990ma
I@Vspec 828ma
System Voltage Max 50v

I need to find a proper regulator for this to charge batteries
for emergency power, and perhaps additional panels for more
power. Thanks for any suggestions!

This is my Kenwood PS-50 heavy-duty 20+ amp power supply with built-in silent cooling fan and DC connecting cable, plus separate output terminals capable of up to 16 amps.
The PS-50 is the power supply that was sold with the Kenwood TS-440 transceiver, but was designed easily to power ANY Kenwood rig (120/130/140/680/430/450/850/570/870) that needs 13.8 VDC in an external supply. This one is one-owner/nonsmoker, in excellent physical condition, and works perfectly in all respects. AES sells them for $165. They bring $150+ on ebay. I will sell this one for $110 + shipping firm, no trades, and will be able to ship about 10/1. Tks es

From: Solmar Quihenderpielle <Quolo@snedmak.net>
Message-ID: <yFuC3.39$I8.9990@news7.onvoy.net>
Source record: 98780

Yes, the FT2200 is a 50 watt unit and incidentally is an intermod sponge. When the final blows, many techs replace it with something they may have on hand or they buy a 25 watt final because it is usually quite a bit cheaper. They realize that doubling your power from 25 to 50 watts does little to improve your signal strength at the receiving end. What you most likely have is a modified FT 2200 and you would have to put in a new expensive 50 watt final to get back to the original unit.

6106. FS: Excellent HAMLINK Remote Radio Controller

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-11 00:00:00 UTC
From: Jan N0JR <swanman@cfu.net>
Message-ID: <37DA7DF3.AADBCF35@cfu.net>
Source record: 98783
Cross-posted to: alt.ham-radio.marketplace,rec.radio.swap,rec.radio.amateur.equipment

This is the very rare AEA HAMLINK Remote Radio Controller. I have used it to control my remote station to complete 5BWAZ. No longer available on the ham market, a complete HAMLINK setup is the ONLY way to remotely control Icom, Kenwood, and Yaesu radios from a Touchtone phone, and distance is no object: my remote site is 500 miles away!

This HAMLINK setup is COMPLETE IN EVERY RESPECT. It includes: The HL-60 HAMLINK Interface that goes between your rig and telephone at the remote site; the OP-80 OPERATOR LINK that goes between your phone and mic, headset, and CW key at your home site; the HL-62 Interface Cable to connect your HAMLINK to any Kenwood radio and control almost every Kenwood function; RJ cables to connect HL-60 and OP-80 to your telephones; all original manuals (including schematics and cable wiring diagrams if you're using a rig other than Kenwood); AND a top-quality telephone headset with amplified mic and headphones that produces terrific pileup-cutting audio. IN SHORT, HERE IS EVERYTHING YOU NEED TO COMPLETELY CONTROL YOUR RIG, IN ANY MODE, ON ANY FREQUENCY, ANYWHERE, FROM YOUR TELEPHONE. And the HAMLINK gives you seven switchable relay outputs as well, to control such things as power-on to other equipment, antenna switches, and even a rotator.

All pieces are in excellent to mint condition and work perfectly. The HAMLINK setup sold originally for over $400, and the telephone headset for more than $200. I will sell all for $175 + shipping, no trades. Tks es 73!

6107. HF rig FS or Trade

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-11 00:00:00 UTC
From: Oris <oris@dirtball.com>
Message-ID: <37DA84A8.87E5CB69@dirtball.com>
Source record: 98784

I had a guy tell me that he was moving to Philly PA. He said that he
wanted the HF rig. He said he would call me Friday. Well its saturday
and I have not heard from him. His offer was a Kenwood all mode 2-meter
rig. So I'm reposting what I have for sale or trade.
I have an ICOM 740 HF mobile that I would like to sale or trade. I'll
Take 300.00 cash plus shipping thatï¿½s about 25.00 give or take. I trade
It for a Pentium 233 socket 7(I will consider any other Intel Pentium
Computers above 120 MHz) with at least 2 gig hard drive and 32 Megs of
ram, 56K V.90 modem,(I will consider 33.6 and 1 gig harddrive) Keyboard

Mouse and 13in svga monitor. Or I will take a 2-meter all mode base rig
Digital readout. Tell me what you have to offer for this HF rig.
The ICOM 740 is the stock IC-740 it has no power supply it runs
Strictly 12 volts DC. The rig is in good clean shape and I don't smoke
and the guy that had it before me doesn't smoke. I was the third owner.
I ran the rig in the mobile. The rig covers all the ham bands. It
Doesnï¿½t have a continuous coverage receiver. The rig has both sidebands
CW
And RTTY as far as modes. Its dimensions are 111mm (H) x 286mm (W) x
374mm (D). Itï¿½s rated at 200 watts input. I will include stock mic and
instruction manual.
Drop me a line and make offer
73 from Oris

6113. Best Ways to Reduce RFI?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-12 00:00:00 UTC
From: Douglas Schnell <dschnell@oxy.edu>
Message-ID: <7ri6rl$421@sophri.cc.oxy.edu>
Source record: 98540

Folks--

Not sure if this is the correct place to post (if you have any suggestions as to more appropriate areas, feel free to pass them on), but I thought I'd try anyway:

I purchased a KVM (keyboard, video, mouse) switch from Apex for use on a home network. Unfortunately, it is a Class A device and provides a rather serious level of RFI on the TV located in the same room. Unfortunately', I don't have access to cable so I'm forced to use my existing antenna setup. Apex has no solutions (other than moving the TV and switch further apart). My feeling is there must be some sort of RFI "filter" or "deadener" on the market.

The switch and TV are isolated on different outlets, with the switch further removed from regular wall current by an APC SmartUPS 1400 power supply. There is no way to isolate the two on different circuits, however. Based on the isolation already in effect, though, I don't think this is a problem with feed through the electrical line. I am convinced it is from an RF field given off by the switch.

I could warp the switch in aluminum foil, but this is a less than attractive option. Does anyone know of anything that might help? Again, if you can refer me to a more focused newsgroup on this subject, I would be most appreciative.

Thanks.

--Doug

6114. HELP! How to put TMV7A into crossband repeat mode?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-12 00:00:00 UTC
From: Rudi Wiedemann <wiedemann@home.com>
Message-ID: <n1PC3.10574$Vi5.129888@news1.frmt1.sfba.home.com>
Source record: 98590
Cross-posted to: alt.ham-radio.marketplace,alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.amateur.misc

The manual (and on-screen help menu) says to:

1) press VHF or UHF band select
2) press the CONT SEL button
3) press the VHF+PWR buttons simultaneously

Well, pressing VHF the second time cancels out the "ctrl" flag on the
display, and pressing the PWR button shuts down the unit (what a surprise!).

If you know the right sequence, I (and 3 other TMV7A owners) would
appreciate it.

Not to mention that Astron has the finest customer service of any
amateur radio company that I've ever dealt with. Twice they've helped
me out with mine for free. The last time, after 10 years of daily use
the power switch failed. Obviously it is way out of warranty. But
Astron sent me a new one for free. Not even a charge for shipping.

The Yaesu VX-1 and VX-5, Icom IC-Q7, and several Standard radios are all small "pocket sized" units. There are also some "thick credit card" transceivers around. I don't know about all of these, but I'll bet that most of them will receive (but not transmit) AM aircraft and FM marine band out of the box, with no modifications - that's very common today.

For transmit, you need to have some idea of the power you need. Almost all of the above radios are a few hundred milliwatts RF out, which is OK for short range use. If you need several watts, the VX-5 is the only full-power tiny HT available.

I had visions of clandestine transmissions...007 type stuff...<g>

I don't know if this would "help" at all - but when I use a belt-mounted
2-amp power pack, the battery eliminator I use is the same size as a
FNB-47 battery - but it is quite light (nothing to speak of inside). It
is quite a different "feel" to the unit when talking into it than when
a "normal" battery is attached.

But "wireless" is an interesting way to go....

Hi :-)
I am the lucky owner of an FT8000 and the ADMS-2d software... but i am not able to make the template-file. The computer downloads the radio unto 100% is reach... but then i get the message: "Receive timeout". I have tried allmost evrything.. but my settings are correct and my cable is also ok.

If someone has a xxx.tpl file for the FT8000r to mail me i'll be glad :-)
That way i can test if its possible to upload anything to the radio....

Best regards
Espen@Esp1.no

I have been using 723's as voltage regulators for years and have NEVER had a problem. I built a homebrew supply that will run 35+ amps. It uses a 723 regulator chip, a Darlington driver, and 2N3055 pass transistors.

Additionally, I have two Astron power supplies that stay on 24 hours a day, 7 days a week. One an RS35M and the other a VS50M and neither have given me any trouble.

Look at the back of the radio. There is a socket in the back which looks like a tube socket for accessories (ACC) if no accessories are plugged into it (like a remote VFO) I believe it must have a jumper plug plugged into it or the radio may not work! You might also verify that the internal speaker is in place and hooked up (perhaps plug in headphones and see if you hear anything)..... Good Luck, 73 Bill

I don't think the TS-430S is a good choice. The TS-440S, TS-450S are good radios. I own a TS-440S and a TS-930S, both very good. My ICOM IC-725 is very good too. I don't care for Yaesu rigs. I have owned a TS-820S and liked it very much but, as you say, doesn't have a general coverage capability. That's nice to have but I find I don't use it much.

Great mobile or starter rig! I have an ICOM 740 HF mobile that I would
like to sale or trade. I'll Take 300.00 cash plus shipping thatï¿½s about
25.00 give or take. I trade It for a Pentium 233 socket 7(I will
consider any other Intel Pentium
Computers above 120 MHz) with at least 2 gig hard drive and 32 Megs of
ram, 56K V.90 modem,(I will consider 33.6 and 1 gig harddrive) Keyboard

Mouse and 13in svga monitor. Or I will take a 2-meter all mode base rig
Digital readout. Tell me what you have to offer for this HF rig.
The ICOM 740 is the stock IC-740 it has no power supply it runs
Strictly 12 volts DC. The rig is in good clean shape and I don't smoke
and the guy that had it before me doesn't smoke. I was the third owner.
I ran the rig in the mobile. The rig covers all the ham bands. It
Doesnï¿½t have a continuous coverage receiver. The rig has both sidebands

CW
And RTTY as far as modes. Its dimensions are 111mm (H) x 286mm (W) x
374mm (D). Itï¿½s rated at 200 watts input. I will include stock mic and
instruction manual.
Drop me a line and make offer
73 from Oris

6160. HELP: CTCSS acting weird on HTX-242

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-12 00:00:00 UTC
From: Robert Sojka <rsojka@worldnet.att.net>
Message-ID: <7rhrk9$4b2$1@bgtnsc01.worldnet.att.net>
Source record: 98636

I've got the strangest problem with my Radio Shack HTX-242 mobile 2m. The tone decode doesn't seem to work. When I tune in to a repeater that sends out a tone and set the tone squelch on the radio the signal does not get through. So I did a little test and set tone encode and decode on two seperate HT's--a Kenwood TH 79D and a Yaesu VX-5R and made some transmitions over simplex. Both worked OK between each other, but the mobile would not open up. Sometimes, depending on the tone frequency, the Kenwood could get the mobile to open up, but the Yaesu never could. Also, when transmitting on the mobile HTX-242, the kenwood would always open on the tone, but the Yaesu never would. What I don't get is there is no problem between the Kenwood and the Yaesu and I never have a problem with a repeater opening up on the tone sent from the HTX-242. Clearly there's something wrong with the HTX-242 tone decode since I can't get it to open up on any repeaters that send out a tone, though sometimes the Kenwood could get it to open up. But, when it sends out a tone the Yaesu also won't open up but the Kenwood will and so will other repeaters. Is is possible that the Yaesu just has much tighter tolerances on its tone decode? What the hell is going on here?

Anyone ever have this problem with an HTX-242? What can I do at this point? Do I have to replace the CTCSS module and is that something I have to send the radio in to do?

Anyone want to by a radio--cheap.

Thanks in advance for any information.

Rob

Well if a speakermic is wireless, I suppose it does generate some kind of signal on its own. I think Kenwood makes a wireless mic for one of its HTs. I don't know how it works, but I imagine it uses 900 MHz or 2.4 GHz between the mike and radio.

The application is not so different from other speaker mics, just more convenient. I'd love to have my HT on my belt or in a backpack, with only the mic to handle when talking.

From: jtien@Tsoft.com
Message-ID: <63EC3.4909$N77.371368@typ11.nn.bcandid.com>
Source record: 98670

Hi,

I am looking for a recommendation for a small 2m HT that is easily modifiable to receive am aircraft and fm marine. The HT should be as small as possible. The radio will be used mainly as a monitor and ocassional low power transmit to a local 2m repeater in town.

Thanks in advance.

Joe

6169. Re: recommendation for a mini 2m HT for aircraft and marine receive

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-12 00:00:00 UTC

Message-ID: <19990911230859.08105.00005920@ng-ci1.aol.com>
Source record: 98671

If size is the major determinant, I would suggest the Alinco 2m credit card tranceiver. They are quite cheap now too being around $80.

I have one and find the following to be significant negatives in the rig:
-300mw tx power
-very small non-removable telescopic antenna

other negatives
-low audio output through the necessary spkr/mic
-only 20 memories

For the size and money, the radio is a good deal, but if you can tolerate a larger rig, I'd look at the Icom Q7 or Yaesu VX1.

6170. Re: recommendation for a mini 2m HT for aircraft and marine receive

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-12 00:00:00 UTC

Source record: 98672

Hello Joe. Unless you are a licensed ham, any power transmission on the repeater is a no-no. I do not know of a 2 meter portable that will hear the aircraft frequencies. Air planes use AM, not FM. To open a reciever for marine FM is dependant on the radio and if it can be opened up. With some of the radios, it is a simple matter of put the frequency in and see if the radio takes it. Just a few bits of food for thought. Marilyn Hartley W4ME.

Source record: 98674

This question comes up about every 2 or 3 months -- dig through deja news if you want to see all the chatter but it all boils down to the same answer. The short of it is: it is not a pin to pin cable. There are level converter ICs imbedded into the DB-25 hood. I tried to reverse engineer it and gave up -- too many little surface mount parts with no identifiers --- you want to use it, you gonna have to buy it.

But, on the plus side, it works just great -- use it with my TMV7 and the TM-G707 -- program them both with it and the free software from kenwood.

have fun

Change diagram below to Courier New;

IC-756 GC HF TX Mod (1.6 - 30.0MHz)
VHF remains 50.0 - 54MHz TX only - pity!!!

Modification summary:
Remove the W805 jumper chip on MAIN unit by soldering iron.

Modification Procedure:
1) Remove bottom cover of IC-756.
2) On MAIN unit board you will see IF filters and daughter board (DSP filter) on the right side.
3) W805 jumper and IC803 chip located under DSP board.
4) You have to remove DSP board (lift it up careful).
5) Look for IC803 and line of jumpers (little green bugs).
6) Remove W805 jumper.
7) Install DSP board and bottom cover back.

```

That's too bad. NTIA requires 20HZ for HF. That means .67ppm for 30 MHz. Oh well, I guess the '706 is still the best bet, then.

Source record: 98684
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.swap

I just received an HF antenna that I think is a Hy-gain DX-88. There is a total of 8 small black coils and one is marked 80 40M ASSY, 878532, HyGain 1991. Since it has the 80 meter coil, I figure it is the DX-88. There are also coils marked for 10,12,15,17,20 and 30.

Does anyone have the assembly instructions for this antenna they can send or copy an mail. I will gladly pay for the copy charges. Ed/N3WJA

6183. Re: Astron vs Triplite. Which is the better supply?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-12 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <37DB9D52.1419E5B3@dialpoint.net>
Source record: 98685

I have used several of both and so has a good friend of mine. The
Astrons seem to use beter components. Also the Astrons can be ran closer
to the max current ratings than the Triplite units. This is continous
use such as FM service and not the CW or SSB transceivers. One bad
thing about the Astron units is they seem to go into the over voltage
mode if you cycle the power off and on fast. I thik someone has a fix
for that, but don't remember where I saw it. We had a repeater powered
by an Astron unit for several years and it worked fine untuil a storm
came up and I assumed the power blinked. A trip to the repeater and cut
the Astron off for 5 seconds and back on and all was well. Did this too
many times and replaced it with a Triplite unit. That ended the
problem, but did go up a size on the current rating as the Triplite
does not seem to be as heavy as the Astron.

Ed
I don't know how Hygain is but I contacted Mosley for an
instruction manual for my CL-33 and they wanted $10 for
a 5 page photocopy. They said that the other companies
are charging about the same. I said no thanks and that I
would try to find someone to make a copy of theirs for me.
Well I did and they sent it for free. Good luck and I hope
someone will be as generous with you as they were with me.

FT101ZD, I just purchased one at a hamfest and it looks mint, one of the cleanest I've seen....but has no recieve....before I tear into this thing I have a question....
Looking inside I notice it doesn't have either the AM or the FM board installed and the manual says it come with one or the other installed. this is from an estate sale and I wonder if someone has robbed it. My question is, is this the reason the rig doesn't recieve? does one of these boards have to be installed?

By no receive I mean there is no speaker noise or anything...

I'm in the electronics repair business but being unfamiler with Yeasu's I thought the smart thing to do would be to ask a few questions first....

Greetings

I am trying to identify 4 components that I picked up at a local
amateur radio flea market. I know I have 2 power supply chokes,
and 2 transformers, but can't find any specs on them.

They are all made by Hammond and the 2 chokes are marked as follows.

DB5F
54-125-1
HAMMOND
79084

DB6M
54-124-1
HAMMOND
79083

The 2 transformers are marked as follows.

DB3K
MEL 53-162-1
HAMMOND
79082

53-159-1
HAMMOND
79079

Any help identifying these items sure would be appreciated. I have been
building stuff for many years (about 35) and have checked many electronic
catalogues that list HAMMOND products. So far, I have come up empty
handed. All 4 items are in rectangular metal enclosures, no wire leads
just solder terminals.

Regards
Reed

And digging even deeper, AEA did not making them either...they are Mitzuo
radios-they are still in business, but nobody in the USA imports them
anymore, AFAIK.
Mitzuo makes them in many bands, from 40 Mtrs to 6 Mtrs(and maybe other
bands too)?

All AEA did was to order the 10 and 6 Mtr units, with the options
added(noise blanker, I think), and had the AEA name printed on them.
P.S.-If you DO find a US source, let us know-I have 2 10 Mtr ones
already, but I'd like to get 1 or 2 of the 6 Mtr units!

> even a 450 instead so I could also listen to other than the ham bands.

If "cheap" is a requirement, then go for the TS-520. It doesn't cover outside the Ham Bands, and the VFO drifts a little, but it is a good solid rig.

The TS-430 was the first of the Kenwood PLL rigs. It is a good solid radio with extremely low drift. It doesn't have many memories, and output power is a little lower on Ten Meters. If you can find one at a good price, it would be my first choice recommendation.

The TS-440 should be better than the 430. At one time, it had the reputation of being the most common Ham Rig on the market. However, it also has a bad record of problems on the VCO board. It seems that Kenwood used a corrosive potting compound to provide mechanical stability for the VCO coils. The "fix" requires that the old compound be dug out of the coils and replaced with something non-corrosive. Unfortunately, the corrosion may have already damaged some coils beyond repair. I do not recommend the TS-440 for this reason.

The TS-450 doesn't have the VCO problem as far as I know. It was a current model until the now-current TS-470 came along. It isn't bad, but the used prices are outrageous!

Rick,
My first 8500 was returned to Yaesu 3 times...(a temperature related problem with the 70 cm side...it wouldn't transmit until keyed approx 10 times)...then yaesu replaced it with another unit (not new)...within a few months the 2 meter transmit went out...I could scan 2 meters but never could select a freq and transmit....it was like the squelch was stuck open...I just received it and hope it works for some time...I like the radio and Yaesu has done me ok so far. Make sure the contacts on the face plate are making good contact.

Hello,
Would someone with the service manual for the TS-130S please
advise me of the internal adjustment(s) required to adjust the
PA ALC action? I have one that has been "turned up a little" and runs
out of ALC on 10M. It is an easy adjustment, just dont recall
the pot to turn on the inside w/o schematic or svc manual to guide
me. Obviously, not into "turning this and that" to experiment!

thanks,
Joe

I have had most of the radios you mention. My personal favorite is my 440. It has a lot of punch getting out, nice recieve, I have had no complaints. I also still have the 450. That is an all right radio but it just doesn't have the punch of the 440 and some of those radios like that. I have never had a 430 but I know some one who had all 3 at different times and I would have to say that the 440 was stil a little better in that it has good punch to the audio. for some one who is just starting out in hf you really might considder the 440 because it really does have a lot of punch and they last as do all kenwoods. the 450 has more bells and whistles but I never see a use for any of them and I have had the radio for 4 years now and I bot it new. This is just my 2 cents but ask around and you will get the same between these 2 radios and maybe all 3. You would love the 440 I think and if you have any questions on any of these radios don't hesatate to email me and ask. the email is racerjm3@aol.com

I think it is very inaccurate to classify the TS450 as not having any audio 'punch'. Even with the stock mic and the processor turned on it has great sounding transmit audio with more then adequate punch. On the other hand fit that TS450 with a nice Astatic D-104 (without any processing) and you get 'plenty of punch'. I would not ever recommend the TS440 to a new ham unless the vco 'fix' had been done and could be verified as such. BTW TS430's have a finals problem that require bench time for a complete resoldering or buss jumpers added. Between all three I would have to recommend the TS450.

> GO figure? 73's TIm

Sadly, I bought one on 09/08/99 and it's DOA. No front panel screen. Once in a while it will pop
on, but mostly dark. When it does come on, I get a VFO error. Just finished the letter to the
repair department and will ship it tomorrow. Looks like a decent radio when working tho. I am
loking forward to putting it in the car. Hope this process doesn't take months.

This is just a note to those who think they are all working out of the box. I bet 95 precent of
them do work. 1300 dollars and one day later, I have to send mine back.

Source record: 98546

I am not a big lover of ebay either.. but it is the users who bid up the prices not ebay.
The person placing bids needs to research the item they are bidding on before putting there money where there mouth is.
Sometimes, like yourself I am amazed if the people bidding have a clue?

What I don't like about ebay is the lack of protection of rip-off artists. I was taken a few months ago for 800 bucks.. and they didn't lift a finger but tell me to file with the post office for postal fraud..

Buyers be ware !

6243. Yaesu 8500 problems

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-13 00:00:00 UTC
From: rickgans@mindspring.com
Message-ID: <37dc55cf.252195065@news.mindspring.com>
Source record: 98548

I have Yaesu FT8500s installed in both of my vehicles and rarely use either of them. But one of them suddenly was unable to be turned on last Spring and had to be sent for repair. It came back more than 6 weeks later and worked, but now, after on 60 days it doesn't work again. I use both with the separation kits and the Mr. Potato Head mikes.

Anyone else experience any similar problems with this radio?

This TR4C Station is in very good looking and good working condition.
All original and on the air. 8.5 out of 10. Comes with a good copy of
the manual and a handmic. The receiver is very sensitive on all the
bands and the transmitter sounds good using three 6JB6s in the output.
Just plug in the mic and you are on the air with full output 80 through
10. $295.
I have JPGs available if interested. 73 Chris VE3NGW/W4 Florida

I have a Sony 2001 SW receiver that had an on-off switch problem which was fixed. In the proccess I broke some wires and gave up on the project which worked great till that point. If you have one and need a spare for parts this is great. Or just fix it. $50

6267. TE Systems e-mail address? Looking for manual of 4450G

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-13 00:00:00 UTC
From: Henk Remijn <hremijn@nospam.zeelandnet.nl>
Message-ID: <37dcc7c7$0$19946@news2.zeelandnet.nl>

I have a TE Systems 4450G amplifier, but no manual or schematic.

Does someone have a manual or schematic, or does te systems have an e-mail address.
I know their telephone number, but international telephone charges are high.

The review of the rig in CQ VHF Sept 99 issue indicates that they had
two of the FT-100's go bad. Yaesu indicated, according to the article, that
some early production FT-100's had improperly aligned components in the
finals, and that new production units had been corrected. Original spec
units are being upgraded when sent in for repair.

Hi!
I was interested in one of these radios too but was wondering if it has trouble with intermod? I had a Yaesu 736 at one time that got alot of intermod and was wondering if there have been any improvments with the 847. As I live in a very large city this is a prime concern.

TUBES AVAILABLE

I currently have over 300,000 tubes in stock. Have a good selection of both
new and used/tested tubes for audio, CB & HAM radio, TV, CRT use.
Sorry I do not have a Web Site nor a price list. Suggest that you Email or
Fax me with the tubes that you are looking for along with the quantify of each
needed. I will check my inventory and advise you of current availability and
cost.
In addition, I also have a very good selection of tube testers, tube caddies
and good used CB/HAM equipment. Please contact me regarding you needs.
Thank you for your consideration.

Hi Fellas;
I have for SALE:
(1) Hallicrafters SP-44 Panoramic Panadapter, complete but needs restoration, they are kinda rare.
Cabinet has been ventilated, top and sides(holes in a line) but not shabby, rust spots here and there, will need painting.
Front panel is complete but same condition. Scope tube hood and scope tube cover inside will need de-rusting and painting. The rest of the inside is Complete and NOT RUSTED(Amazing!), but needs major cleaning.
It will need bringing up on a variac but caps should be checked first. Has not been powered up in ages!
I can supply a copy of the schematic.
Price is $50+ ups from LI, NY.
Any Brave souls out there, Hi!
Thanks es 73....Rich WA2RQY (1961)

After posting my message, I swapped the main unit that worked with the one that doesn't. The working unit worked fine in its new location and the bad unit didn't work at all in its new location. This tells me it is definitely the main unit that is bad, and not the connectors to the head or the separation cable. I do have the radio wired to the battery, and I don't have the radio on when I start the car, ever. Someone has e-mailed me with similar problems, and suggested a reset, but I don't know how I can reset a radio that won't even turn on.

Hi!
I was interested ingetting one of these radios too but was wondering if it has trouble with intermod? I had a Yaesu 736 at one time that got alot of intermod and was wondering if there have been any improvments with the 847. As I live in a very
large city this is a prime concern.

6301. Re: TS-430, 440, 450

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-14 00:00:00 UTC
From: Mel Lyttaker <lyttaker@interl.net>
Message-ID: <7rl9h8$68$1@forge.sbt.net>
Source record: 98454

One important short-coming in regard to the TS-430 is that the relays that switch band operation often go bad. When I was shopping for a "more modern" used HF rig six years ago, I found both a 430 and a 440 in my price range. Being a poor college student at the time, I decided to go with the 430 because it was $75 cheaper, and several of the local hams still used their 430s after buying them new in the early 1980s and had nothing but praise for them. The salesman at the store selling the 440 actually warned me about the 430's relay problem, but I thought he was blowing salesman smoke. After a month of using my 430, another ham dropped by my shack and brought to my attention that the rig's receive dropped out in several bands. Needless to say, it cost me more than $75 to have the relays replaced!

Many 430s are also plagued with transmit problems--evidently, early models didn't have the finals grounded correctly and transmit power intermittently drops out to just 10 watts. It took two trips to Kenwood repair to have that problem corrected.

From my experience, you'd be better off spending a few more bucks for a 440. Not only does the 440 have more features (memory, tuner, etc), but Kenwood apparently got the design for an entirely solid state HF rig right the second time around.

For what it's worth...

Just need one more Motorola UHF Maxar
50, PL type radio, to complete our 440 link
project. Wouldn't mind having 5 or 6 extras
though as spares.

Ok if these units are missing the microphone,
power cords or mobile bracket (accessories).
Please dig around and see if you have this older
1 or 2 channel crystal, compact UHF mobile in
your, junk radio box.

Poor cosmetics ok, but it MUST BE WORKING,
must be UHF and PLEASE, it MUST BE A Motorola
MAXAR 50!!

Also please, DO NOT POST REPLIES here on
the N.G. Contact me PRIVATELY by E-Mail or
telephone with any information you have.

Thanks again for reading;

6316. Re: TS-430, 440, 450

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-14 00:00:00 UTC
From: w9sz@prairienet.org
Message-ID: <wosD3.203$%K6.54@firefly>
Source record: 98469

In a previous article, radiobufff@aol.com.rfi.tvi (Radiobufff) says:

>>
>>The TS-440 should be better than the 430. At one time, it had the
>>reputation of being the most common Ham Rig on the market. However, it
>>also has a bad record of problems on the VCO board. It seems that Kenwood
>>used a corrosive potting compound to provide mechanical stability for the
>>VCO coils. The "fix" requires that the old compound be dug out of the
>>coils and replaced with something non-corrosive. Unfortunately, the
>>corrosion may have already damaged some coils beyond repair. I do not
>>recommend the TS-440 for this reason.
>>

I worked in the electronics repair business for about 10 years and saw this compound on just about everything. It's actually more like contact cement dabbed and/or dribbled onto components to keep them glued to the circuit board in case one of the components wasn't soldered very well by the "wave machine" and wants to fall off the board after the equipment gets bounced. I've seen it on almost every VCR made in the last 5 years.

After a while the contact cement becomes discolored, conducts electricity and becomes worse if it absorbs humidity.

When the TS-440 has this problem, the VCO loses lock and the display goes to a series of dots (.....). I took my TS-440 apart and removed every component from the VCO board and cleaned the glue off all the parts. I had to replace a couple transistors but the coils remained intact. It was a few hours of work but I now have a TS-440 I don't have to worry about.

6318. Atlas 210X service info?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-14 00:00:00 UTC
From: Jerry Franks <w4rf@att.net>
Message-ID: <7rlk12kdj1@bgtnsc03.worldnet.att.net>
Source record: 98471

Is there such a thing as a service manual for the Atlas 210X? I bought a
nice clean one recently and although I have a manual it's not much help.
Components are not identified on the boards or in the manual and it makes a
line-up difficult. The receive is OK but transmitter output varies with band
and all bands are lower than expected. The rig sounds fine on the air.
I'll probably get it working right eventually but if anyone has some service
notes, etc., that they could forward it would save me a lot of time and
would be appreciated.

There is not one. Adjustment is by uPc control in the service menu. If
you don't have the test equipment and manual, don't go there. If you do
you will have to find someone who does have the equipment to straighten
it out.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

The radio was already built & designed for wide recieve, so it wont matter.
It kind of like saying that if you "block" your TV set's dial & prevent it from
turning past channel 7, channels 2 thru 6 will then "come in" better. When
you dial up 146.52 on the ADI it will recieve the same while on that freq
"weather" or not the CPU has been prevented from allowing direct entry of
162.55 (which by the way is all blocked & unblocked from the front keypad
controls) Hpoe this helps!!

Tim,

Would you really please provide some facts to back up your claims.

Who is this UK dealer that told you about a FT-100 MKII?
What are the names of "all" of the FT-100 owners that have sent their radios back 3 or more times?
Who are the dealers who have told you they are not going to sell anymore FT-100s?

If folks really want the facts just go to http://www.onelist.com and sign up to the FT100 list. There you can look back through the archives from even before the radio was released and just see the more realistic numbers for people who have had problems with this radio.

So why is it Tim, that you seem to be waging a one man campaign against a radio that you have never even owned and I would guess have never even seen?

73

I bought a Yaesu FT107M back in 1982. It is still the only HF rig I have
ever purchased and it's still going strong. I rarely get on the DC bands
anymore but I use it daily as the exciter for my 144MHz transverter.

I would not hesitate to purchase another.

If you're going to get the 430-40-or-50 strictly because of the
general coverage receive up to 30 mhz, and if you plan to listen to
the shortwave AM broadcast stations, they won't sound worth a darn
unless you have a wide 6 mhz AM filter, and I don't know that these
rigs came, standard, with such a filter. If the widest filter is the
SSB 2.8 khz filter, it will sound bad on the AM stations.

You'll also probably find, once you have all these interesting ham
bands to listen to, the allure of listening to the shortwave AM
broadcast stations fades.

By the way, I have an Icom 735 which has a darn good general coverage
receiver, probably as good as the Kenwoods, and used, the 735 is in
the $450 range. (But the Icom doesn't sound all that good on the AM
shortwave bands because it, like the Kenwoods, has only a 2.8 khz SSB
filter as its widest filter.)

Walt OM,

Why don't you get manuals for the SB-10 and Viking II from one of the manual suppliers? HI-Manuals is one possible source. The SB-10 manual shows the connections to a DX-100, and you can infer from that how to connect up to a Viking II. It requires modification of the final amp circuit to run AB1 (linear) instead of class C, which requires the addition of voltage regulation (VR) tubes for the screens. The modifications are not that difficult.

John,

I have one of these and a manual, but how to get it to you. FAX
would be easiest for me. Email me at arrl.net (goes home) and I can copy
the schematic and bring in to work and fax it.

Regards, Steve K9DCI

I have two Kenwood TS430 S's. Both are in perfect shape electronically. One has a few, very few scratches and comes with a hand mike for $430, the other is virtually perfect and comes with a desk mike for $475 Both are great rigs, used daily. I have used both on PSK with no drift problems. I get better signal reports from both using the same antenna with my new FT-920. It seems these older rigs work great. I also have a cherry Swan 350D, that has digital display and an extra final tube for $275. It also outperforms my FT-920 overtime. Great old rig in perfect condition. Includes a desk mike. It seems to be one of the most solid Swan rigs I have ever seen. The manual says it will do 300 watts PEP +, I do not know but it does do 100+ Watts solid.
Thanks Bill

I would like to trade something from the list below for another FT8500
with tone board installed and either mic is fine.

Please let me know,
Mike

3 Maxtrac 800's mobiles B5 (no mics or power wires)
2 STX's one with charger
1 MT1000 99ch UHF (no charger)
1 GP300 UHF with battery and charger
1 VHF Maxtrac(will take 5 days to get) no mic or power wiring
4 Saber I UHF's 12ch 440-470 split >>no battery or charger<(used
condition) they range from a 6 to a 8 on a 1/10 scale. Some have
antennas, some don't.
2 Johnson VHF's 120w 99ch - 1 remote and 1 dash (Remote 5 days, dash
here) with mic and short power wire
2 Johnson 40W VHF 99ch(no mic or power wires)
several strobe power supplies and strobe heads
plain replacement strobe bulbs
siren and speaker
push button control switch (like in Galls book)

HAM wrote in message <7rjdvvvtk1@nnrp1.deja.com>...
> Does anyone know if the Yaesu FT 8500 can recieve the 800-950 (or
>more) band?? Is there a mod to do this ??
>
I did a search and found a software mod that "works". The reciever thinks
it's listening to 800 mhz, but in reality it is as deaf as a post!!

Yeasu FT-8500 Modifications 3/22/98

UHF RX will be 300 - 520, 800 - 996
VHF RX will be 110 - 174

The mod is easy. This will give you 137-174mhz and 410-470mhz Tx/Rx.

1. disconnect power and antenna (like, you would'nt of done it already.)
2. open up the case by removing the screws and gently removing the cover and
unpluging the speaker.
3. locate and CUT the GREEN WIRE on the CONTROL BOARD (the vertical board
behind the control panel.
4. reassemble the radio.
5. RESET THE MICROPROCESSOR (so much for the memory!)

(press and hold [D/M] & [REV] & [ENT] & turn the power on)

(turn off the radio).

(press and hold [SCAN] & [HOME] & turn on the radio - extended RX mod).
the extended rx mod gives UHF 300Mhz to 520Mhz, VHF 110Mhz to 174Mhz.

From the website www.starone.demon.co.uk/faq/radio.html
comes the additional info:
To extend the range to 996 mhz first perform the above procedure
and then do the following steps:
Set the step size to 10khz from the menu
Enter 530mhz using the keypad
Move down 10 khz using the joystick or the dwn button on the MH-39
Move up 1mhz using the joystick or the A button on the MH-39
Enter 917mhz using the keypad
Store the frequency in memory

you now can rx from 800 Mhz to 996 Mhx.

I can only CONFIRM that the radio looks as if it is tunning 800+ I haven't
heard anything yet!

I can't comment on the ICOM, but I have the Kenwood 261A and the Yaesu 2600. They are truly a generation apart. The 261A is a solid radio with good audio, straight forward programming, and all the bells and whistles common a couple of years ago. I bought my 2600 when I sent the 261A to Kenwood for repair, and now the Kenwood is a backup. The 2600 has more power, more goodies, and just plain works better. It is the next generation in features, and costs a few dollars more. I did have some issues with the radio when it was new. All problems were fixed by AES, and now it is a lot of fun to use. Good luck and 73

Dear Future Associate,

You Can Work At Home & Set Your Own Hours. Start earning Big Money in a short time

NO Newspaper Advertising!

Your job will be to stuff and mail envelopes for our company. You will receive $.25 for each and every envelope you stuff and mail out.

Just follow our simple instructions and you will be making money
as easy as
1 2 3

For example stuff and mail 200 envelopes and you will receive $50.00. Stuff and mail 1000 and you will receive $250.00. Stuff and mail 2000 and you will receive $500.00 and more

Never before has there been an easier way to make money from home!

Our Company's Home Mailing Program is designed for people with little or no experience and provides simple, step by step instructions.

There is no prior experience or special skills necessary on your part, Just stuffing envelopes.

We need the help of honest and reliable home workers like you. Because we are overloaded with work and have more than our staff can handle. We have now expanded our mailing program and are expecting to reach millions more with our offers throughout the US and Canada.

Our system of stuffing and mailing envelopes is very simple and easy to do!
You will not be required to buy envelopes or postage stamps.

We will gladly furnish all circulars at no cost to you. We assure you that as a participant in our program you will never have to mail anything objective or offensive.

There are no quotas to meet, and there no contracts to sign. You can work as much, or as little as you want. Payment for each envelope you send out is Guaranteed!

Here is what you will receive when you get your first Package. Inside you will find 100 envelopes, 100 labels and 100 sales letters ready to stuff and mail

As soon as you are done with stuffing and mailing these first letters, your payment will arrive shortly, thereafter. All you have to do is to order more free supplies and stuff and mail more envelopes to make more money.

Our sales literature which you will be stuffing and mailing will contain
information outlining our highly informative manuals that we are advertising nationwide. As a free gift you will receive a special manual valued at $24.95, absolutely free, just for joining our Home Mailers Program.

Plus you will get your own special code number, so that we will know how much you are to get paid. And to make re-ordering of more envelopes, that our company supplies very simple for you.

We are giving you this free bonus because we want you to be confident in our company and to ensure that we will be doing business with you for a long time.

Benefits Of This Job:

1. You do not have to quit your present job, to earn more money at home
2. You can make between $2,500 to $4,500 a month depending on the amount of time you are willing to spend stuffing and mailing envelopes
3. This is a great opportunity for the students, mothers, disabled persons or those who are home bodies.

To secure your position and to show us that you are serious about earning extra income at home we require a one-time registration fee of $35.00.
This fee covers the cost of your initial start up package, which includes 100 envelopes, 100 labels and 100 sales letters and a manual, your registration fee will be refunded back to you shortly thereafter.

Money Back Guarantee!

We guarantee that as soon as you stuff and mail your first 300 envelopes You will be paid $75.00 and your registration fee will be refunded.

Many of you wonder why it is necessary to pay a deposit to get a job. It is because we are looking for people that seriously want to work from home.

* If 3.000 people told us they wanted to start working from home and we sent out 3.000 packages free to every one. And then half of the people decided not to work, this would be a potential loss

of more than $60,000 in supply's and shipping that we have sent out to people that don't want to work

We have instituted this policy to make sure that you really want to work and at least finish your first package.

To Get Started Today Please Enclose Your Registration Fee of $35 Check,Cash Or Money Order and fill out the application below and mail to:

MOHW Co
11054 Ventura Blvd PMB #126
Studio City, CA 91604

I am amazed at your statement.
Ebay is an auction and not a store.
If you were going to sell your old gear, where would you rather sell it, for top dollar on ebay, or just let it go on the net?

6364. Kenwood TS-9130 service problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-14 00:00:00 UTC
From: Tony Sokol <tsokol@megsinet.net>
Message-ID: <37DF03C0.1386F698@megsinet.net>
Source record: 98517

Hi,
I have a Kenwood TS-9130 multi mode rig which has developed a problem in the frequency control / display area. It flickers and looses it's memory when ever you turn it on.

The problem is this: AES was not able to solve the problem and Kenwood says that the rig is too old (15 yrs) and they no longer stock boards or parts for the 9130! (I'm sure glad that I didn't by a TS-930 or something like that back then.)

Anyway, does anyone out there tackle these old rigs with board problems? It is a superb little 25 watt 2 meter multi mode when it work and it seems like a real waste to just trash it. I also have the base for it which is really rare.

Tony - W9JXN

Date: 1999-09-14 00:00:00 UTC
From: DavidC <b4e@earthlink.net>
Message-ID: <7rmvjk$bs2$1@holly.prod.itd.earthlink.net>
Source record: 98518

I would recommend the TS-450S or TS-450SAT ... or for a little more
the TS-690S or SAT. (The AT is for autotuner, it's quite handy.)

The 450/690 (the same except the 690 has 6 meters) are a significant
improvement over the 440 and the 440 was an improvement over the
430. The largest improvement that I am aware of is in the receiver.

The 450/690 has a quieter receiver. The 450S may be found as low as
$550 and as high as $700. They often will have none of the optional extra
filters or other extras, if they do they will likely cost more, negotiate
that so
you don't pay for filters you won't use. Ask for one thrown in that you
will.

The 690S will probably be $150. - $20. more than the 450S.

The AT version of the 450S and 690S will probably be another $75. to $125.
Note: The AT doesn't work on 6m and doesn't work well on many 160m
antennas unless they are well designed, this is not a
load-into-anything-tuner,
it is a fine-tuning-so-the-protection-circuitry-won't-kick-in tuner. ;-)

*** Avoid rigs that have been mobile, they are prone to misalignment and
moisture damage, esp. if they have the autotuner.

I welcome corrections or additions to this thumbnail sketch as I want this
fellow to get the best info.

Source record: 98521

I don't know about any of these "problems" that have been found on the FT-100. I've had one since mid-May and have had no problems with it dying. Even if Yaesu had a few bugs to work out it's to be expected. I heard of a LOT of problems with the IC-706 when they first came out and I'm sure there may be a few with the 706MKIIG. I think that for their first attempt at a compact mobile they've done a pretty good job.

6369. shortwave radio, digital tuning, for travel

Good points David,
I would only add and I think clarify a bit and say (as a TS450SAT owner)
the autotuner works great from 10-80M. It is NOT in the circuit for 160M. It
does not function on 160M. The auto tuner is only for 10-80M. Yes it is
very handy. I have always believed in tuning your antenna and THEN applying
an antenna tuner to touch up an already decent SWR. I have some bandwidth
on 80M well above 3:1 and the tuner in the 450 makes short work of it
bringing right down flat.

can somebody help me 73 Roelof at <zs4rf@intekom.co.za>

6372. FT-1000D vs FT-1000MP

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-15 00:00:00 UTC
From: rick@area.com
Message-ID: <7rptjfopf1@vax.area.com>
Source record: 98290

Can someone basically give me the pros and cons of the FT-1000D
vs the FT-1000MP? The Yaesu web page is not very helpful.
I am confused about the dual receive capability differences.
Also, is either one easier to computer control? I did
figure out that only the MP runs on DC and it has less power.
If money is no object, would you ever want the MP instead of the
D? Are older 1000's a good buy or are the newer ones much better?

Also, I tried to subscribe to a FT-1000 mailing list at alegria.com
but the email bounced. Does anyone know of a functional FT-1000
mailing list at this time?

The rig is fine without it. The 820(not S) had the same analog dial(as the S) and worked fine. The display is just an add-on. Now if someone has "aligned" the analog dial for you then you may have problems.

>attention that the rig's receive dropped out in several bands. Needless to
>say, it cost me more than $75 to have the relays replaced!

OUCH!!! The incorrect way to fix it is to run full power into a dummy
load for about a minute on each band. This burns off enough of the
corrosion to run for a while, especialy if you are in a dry area.

There is a kenwood ASB (amateur service buletin) on how to fix it. It involves
running 12vdc through the antenna connector (with a LARGE current limiting
resistor) while cycling through the bands. The permanent fix adds a few
components to provide a small current through the relays and some capacitors
to prevent the dc going out the antenna.

Both methods worked fine for me.

Geoff.

Yeah, that's a known problem with some of the 2600's. There
is a fix for that if you send it to Yaesu. It's also more
sensitive to low input voltage than the 2500, but this may
be true of the Icom as well.

The 2600 my friend has seems to kick out at anything lower
than about 12.1 volts, which is way to high for an otherwise
decent radio, IMHO. Especially if you want to use it for
emergency communciations.

Anybody have any info on the Icom's lowest actual operating
voltage?

Just random thoughts

6392. TS570DG: looking for opinions !

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-15 00:00:00 UTC
From: it9jcb@my-deja.com
Message-ID: <7rookv$qs4$1@nnrp1.deja.com>
Source record: 98357

Hi,
I would buy the new TS-570DG (improved version).
Has anyone tested this equipment.
I'm very interested on the receiver performances
as:
audio quality (the DSP is always "on-line" and it
cannot be disabled !), selectivity, and especially
the noise reduction (NR1/2) performances (the new
"G" version should be better) in case of power
line noise.
Has anyone noted any AGC attack distorsion on the
audio (a very common problem in modern
transceivers !).

I've a TS-930S since 1988....
The power supply and the PA where broken twice !!! Hi Hi!!
The reason was mainly because the power suplly is not very robust, when
it dies it causes an over-voltage which destroys the PA stage's
transistors.
After the last reparation I've provided to change the line voltage
selector from 220VAC to 240VAC. This lowers the input voltage to the
power supply. I've also reduced "a bit" the power to 110 Watts.
After these settings the rig is operating since 1994 without any
trouble.
The TS930S is for me one the best rigs. I've been owner of a lot of
rigs: TS-940, JRC-135, Icom IC-761 and I've also tested the FT-1000MP,
IC-775 and others: for me the TS-930S still remains the best !

For Sale:

Yaesu FT-50RD Dual Band HT with:
1 FNB-41 600mAh battery and NC-60B Ni-cd charger
1 MAHA MH-FNB-41 900mAh battery
Yaesu E-DC-5B auto cig lighter adapter
Yaesu NC-50 dual slot rapid charger
Yaesu CA-14 battery sleeve for rapid charger (2)
Yaesu MH-34B4B speaker/microphone
Yaesu FBA-15 AA battery case
Comet SMA-3 3-band HT antenna
Diamond SRH805 mini HT antenna

all in like-new condition with original packaging and materials
original cost for all approx. $725.00, will sell for $450.00 or best
offer

Kenwood TM-261A high-power, 50watt 2m mobile radio with:
Comet CA-2x4sr dual-band mobile antenna
Comet SBB25 2m mobile high gain whip antenna
heavy duty mag mount
adapters for using FT-50RD with these antennas

all in like-new condition with original packaging and materials
original cost for all approx. $370, will sell for $180.00 or best offer

or special of everything above for $525.00

Everything works great, I just moved recently and need to sell it all.
Thanks,
Allan

>
> Bill
I have had an FT-50 for about three years and up until recently was also quite pleased with it. It now has developed a problem where it doesn't want to turn on. The ON button shorts out two contacts which provide a signal to the microcontroller. The surface where the ON button presses has deteriorated (its just etched foil) and no longer works well. I haven't found a good solution to it yet.

Other than that the only other complaint that I have is the SMA antenna. In the RF industry they will tell you never to attach an SMA connector by screwing the entire connector because that causes the center pin to spin as it mates. Yet that is the only way to screw on their antenna. I purchased an SMA to BNC adaptor with the radio and I have never taken it off. It also allows you to use a large assortment of third party antennas.

73s and good luck,
Tom

Source record: 98365

My wife and I used tone squelch on our HTX-212's for a couple months operating split frequency. We began to notice full-scale reception of each other but no audio maybe 5% of the time but enough it was annoying. Finally after some troubleshooting I disabled the tone squelch and the problem went away. Maybe the tone squelch circuits in HTX212's and 242's need some improvement. Just my experiences.

One possibility that comes to mind is your R/S mobile may be off frequency just enough to cause the tone to not encode or decode properly. The other possibility is the tone level may not be set right. Beyond that, it may be a component-level failure in the low-pass filter that feeds the CTCSS decoder circuitry.

I have never worked on the HTX-242, so I can't get any more specific than that. Some radios have the CTCSS encoder/decoder board as a plug-in module. If yours is this way, try unplugging it and then plugging it back in. If you have an accurate frequency counter or service monitor available to you, see if you are on frequency - that's where I would start, then worry about the rest.

Good luck.

Dave,

This is exactly the problem that I had with another older Yaesu rig.
The accessory plug and VFO plug are necessary for two reasons: one
applies power to the internal VFO (the smaller one) and the larger one
lights the heaters of the finals (at least this was the function on my
FTDX 560). The manual (if you can find one) shows the required jumper
configurations.

Source record: 98373

I have a variety of Heath items for sale:

Heath AM-2 SWR bridge. This is the one that matches
the DX-40, etc., and is the grayish silver color. Very
good paint and crinkle finish. A scratch on left side.
A "condensed manual" is included, at least that is what
Heath has stamped on it. $ 25

Heath HW-29 "Sixer" lunchbox xcvr. This one has to be
the nicest one I have seen in at least 20 years. The paint
is all great, and so is the crinkle finish. In fact there does
not even seem to be any dust in the "crinkles." The
front does have a hole where an external crystal was used.
$ 50

Heath SB-600 speaker. This is the one that matches the
SB-100/101/102, SB-300/301/303, etc. This particular
speaker looks fine from the front, but the gray outer case
is not as good. If you are a collector, you might want to
repaint it, but it is certainly very usable as it is. Manual
is included for $40.

Heath HM-102 HF wattmeter. Heath green color, with
200 and 2000 watt scales, along with SWR. Good shape
in all respects. $ 40

Desk Microphone. This one is "almost" Heath. It is the
same brown PTT desk mic that Heath sold to go with a
variety of rigs, only this one has the ElectroVoice label
on it. (EV 622) $ 40

Heath low voltage power supply. It is the Heath IP-27. It is a
low voltage power supply, fully adjustable from about 0.5 Volts
to 50 Volts. It also has current limiting that is built in and
adjustable from a couple ma up to 1.5 amps. There is also
a nice large meter for measuring current or voltage. The
supply is "floating", so can be used for either plus or minus
supplies. It is the "Heath Brown" color. Manual included. $100

I also have the following Heath manuals available. All are in good
condition.

Heath HM-2102 VHF Wattmeter $ 8

Heath IM-28 VTVM $ 7

IO-103 Five inch scope $ 10

GR-2000 TV Set $ 10
GR-2050 TV Set - Five book set $ 18
GRA-2000-1 TV Clock $ 3
GRA-601 TV Clock $ 5

Prices do not include shipping from Florida.

Thanks.

73,

Ken, W8EK

Sorry, forgot about those, but I would class them as a 'pointer' to an
advert as opposed to the advert itself, and IMO they are acceptable.

John,

I don't know about the Premier unit (HRO was out and didn't seem to know when they would get some in) but if you have a BJ's wholesale store nearby, they are selling a SUPEREX 17amp/hr sealed lead acid (gel cell) with the jumper cables on the back, and a cigarette lighter on the front, as well as a utility light in front. Also has three led's on front for charge status. They are selling them for $50.00 but after $10.00 rebate they are $40.00! I picked one up and am extremely happy with it. It cranked over a neighbors battery this past weekend with little to no effort. You can't beat em.

I try to remember to shut off the radio before starting my car, but at times the display shows under 11 volts after starting, and my 2600 is
still working. I haven't had problems with loosing memories. I did have the hot mic problem, and had to replace the original mic when it fell
apart. Both problems were handled by AES, and now the radio is fine.

The problem is when that form of ' fun ' is set up as a mandatory
requirement for HF privileges when the majority of would-be ham applicants
have no interest or desire in operating CW. It is a silly requirement and
we already see many signs around the globe of it dying it's deserved death.
Keep CW for those that like that kind of ' fun ' but stop forcing your fun
on everyone else.

Any way to program specific tones for each of the 21 memory channels in this unit? So far I have only found a way to manually change the tone frequency when going into VFO mode, then back to memory channel, not very fun for repeater use.

Any hints?

Hey Guys,
I have a PCS 4000 that is 15KHz off frequency on transmit
and about 5KHz on receive. When I got it, it would not
transmit or receive. I fixed the vco, but I think the guy who
had it before me had been trying to adjust stuff trying to
make it work. Now it's all out of wack.
I'm sure some kind hearted ham out there has the pll
alignment instructions he could pass on to me. I really
hate to spend money on a service manual just to correct
this problem. Thanks.

I would stick with the 930, but then I'm kind of old fashioned!
The 570 has many different menus to memorize (or else constantly refer to
the manual), tiny knobs, etc. Plus, I have always liked the digital display
and real S-Meter of the 930/940S as opposed to the LCD read-outs, but that
is obvioulsly personal preference.

FS: IC-Q7a

I purchased the radio for my wife but she decided not to
continue trying
for the technicians license.

The radio has had no use other than my original
experimenting.
I have the original box, packing, manual, charger and AA
cells.
I also purchased the RT Systems data base software with rs
232 plug adapter.
It allows complete control of radio programing via PC I will
include Vlaski
Goran's software that allows one to extend it's range into
the full AM band.

Since the radio is not being used, I was planning to auction
it on E-Bay.
However, in order to skip the hassle I am willing to sell
all for $140
+ shipping. Everything is mint. (Current retail for the
radio + the software
etc. is about $220 + tax.)

For picture and specs please go to:
http://www.icomamerica.com/amateur/dualhand/#IC-Q7A

If you are interested in purchasing, please e-mail me at
birck@ibm.net.

Thanks--
Ted- KE6DLL

>
> Bob
> n5ahy

I recently bought a mint condition IC-735 in preparation for getting my
ticket later this year (I hope :-)).

According to the manual, the stock filters are 2.3 kHz for SSB. For the
AM shortwave bands, does not the stock AM 6 kHz filter come into effect?
I find the AM reception very good. Not as good as my Drake R8A receiver
with it's synchronous detection, but good never-the-less.

By-the-way, I bought the '735 on the basis of the testimonies of Hams
such as yourself and Gary Coffman :-). I'm not disappointed so far, even
though I have yet to transmit (after getting a ticket later this year
hopefully!).

Cheers,
Nicholas

I have heard that at HRO also . The Salesman was really scared to say it and was looking around to see if the manager heard him say it. I think the Prices of these radios will fall just like the Ic-706 Mk I and Ic 706 Mk Ii did. Eventually they will be at $1100. It all depends on how bad you want the radio. IF you rally like the Ft-100 I would wait it out till they get all the bugs out though.

Also another thing simple you need to check. on those rigs there is a fuse in the receive antenna line. there to protect the rig from over load or static electric on the antenna I guess. this FUSE is really a small grain of wheat bulb marked fuse on the rear panel. since it is not in line on xmit the rig will send just fine. Probably the simplest and cheapest thing it could be. good luck.

Hi there
I have been using my Kenwood TS-570S (G) for a couple of months now. It is the same as the D model except that it has 6 meters. I simply love that radio, best one I ever had. The DSP is NOT ON all the time, there is a button to turn it ON and OFF. It does a very good job on line noise and can be fully adjusted. You can program the PF button on the front panel to access the DSP level and vary it using the + and - buttons near the DSP button. The receiver is very good, better than my ex 450 and selectivity depends on the filters that you put in it. There is also a slope tuning feature that does about the same job in the audio section. The AGC works very well and the values for slow and fast are well calibrated in my opinion. The audio quality in transmit and receive is that famous Kenwood sound and is hard to beat. Transmit and receive audio can be fully calibrated in the menu and it makes a very big difference. Compared to an Icom IC-746, the audio quality in receive is much better. The antenna tuner is not quite as good as the one in the 450SAT but it does a fine job. I hope that helps and if you have more questions, feelfree to contact me by email. Take care.

` For sale: I am selling my one-year-old Nye Viking tuner, because of a cash-flow problem. Unit was bought new, and has less than ten hours use - was used with an amplifier, and I no longer run amplified...
Besides, the radio has a built-in tuner...Unit is in excellent condition, and handles 3kw, with built-in antenna switching for up to four antennas, as well as random and balanced lines...
Want 450 dollars, and you ship - a deal, as they are going new for almost 800 bucks (AES price)
Send inquiries to Greg, KC1CE, at this newsgroup, or email me at 71674gji@home.com...

Thanks...

Sorry Barry but I can't see that there is much difference really. Anyway I
suppose the NG Charter would give precise details as to what was supposed to
be allowed here. I must say that I personally prefer to see pointers for
commercial web sites and leave the NG for 'private' ads.

6456. Prob w/Kenwood 820s digital display

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-16 00:00:00 UTC
From: poofbutt@eudoramail.com
Message-ID: <37e0b5f7.24735770@news.gte.net>
Source record: 98304

Hi Guys!

Anyone familiar w/a Kenwood 820s digital display problem? Sometimes mine works, sometimes not. ie: It still comes on and shows a freq, but not the correct one - MHZ indicator is general up 1 mhz, and the khz indicator is 'jumpy' - off 100 or 200, or 110 and 210, etc.

Any suggestions to a cure would be appreciated -

73 - Ed - KF6YKM/AG

6457. Re: Kenwood TS-820S part wanted

Message-ID: <37e3b9d6.25726677@news.gte.net>
Source record: 98305

Hi Graham!

If you mean the digital freq counter, then the 820[S] will work fine
without it. ie: Add the band (set by FUNCTION) mhz to the dial offset
and you'll have your target freq.

You can even calibrate the 820s easily enough:

1 - Set the FUNCTION switch to 25khz and it will sound a 'marker'
every 25k or so. You can adjust your dial accordingly by holding the
outer ring on the tuning dial and moving the tuning dial for
adjustment.

2 - You can also find a freq with a QSO and politely ask for a freq
check and do your adjustment from there.

3 - 820's and 820S are pretty plentiful on ebay in the $200-$300 range
and you might be able to find a 'parts' 820S rig.

4 - Find a cheap stand alone freq counter and use that. ie: Check
ebay.

Enjoying my 820S in Southern Cal - Ed - KF6YKM/AG

> D? Are older 1000's a good buy or are the newer ones much better?

I'd really like to hear this too. There are economical new FT-1000's
available now (not D's, but I believe that the D is just the 1000
with a package of filters), and I'm also confused in 1000 vs. 1000MP.

The set I presenty use on HF is the IC-765, which is fine for general
simplex use. But it's hopeless when trying to rapidly break a split
pileup, where I really need dual watch on the second frequency.

Regards,

I was cruising around some of my bookmarks when I came across....the Adonis Co website....called RF limited. The are selling 10 Meter Radios. I am not sure if they are C.B. knockoffs but have some interesting features, and up to 200W pep mobiles. Check them out at
http://www.rflimited.com/Contents/contents.htm
I think only one of the models is available at this time and I am going to email them for a price. It seems these radios might compete well with the Tandy (Radio Shack) or Uniden models. Greg

Source record: 98311

I've had both the FT-1000D and the MP. In my opinion the two radios are not even in the same league. The D is a much better radio. The MP puts out 100 watts and the D 200 watts. The MP uses menus, the D does not. The MP was RFI prone, the D was not. The MP had a lot of high frequency trash in the receiver, the D did not. The D was easy to listen to for hours on end, while the MP had a lot of distortion products in the receiver. The D had superior transmit audio characteristics. The MP needed to be tweaked and diddled to sound "almost as good as the D." The MP was glitch prone, while the D worked all the time. The DSP in the MP is of marginal utility. If you like lots of buttons, an led meter and pretty lights, buy the MP. If you like excellent receiver performance, great sounding audio and 200 Watts output, buy the D. Yes, the extra filters in the D version vs. the vanilla FT-1000 are worth it. Buy a used D and save yourself some money. The higher price of the D vs. the MP is justified and a further clue that the radios are not in the same league. You should be able to pick up a used D for between $2.5 and $3 K Just my 2 cents. Irate MP owners, please remember this is one operators opinion and is based on extensive use of both radios. In fact I got a second MP because I thought surely the first must be a lemon. Nope; they were the same. Give me an FT-1000D any day. It is still the best radio on the market. In fact, here is a true story. At one point this year, I called a national Ham outlet and asked the technical manager his opinion on a radio to trade in the D for, as the radio was designed a while ago. He said, "save your money, I shouldn't be telling you this, but there is no radio made today that can touch the FT-1000D in performance." Enough said? Please reply direct by removing nospam from my address...

Thanks,

Brian

I have an IC900 for sale with 2m, 220, 440 installed. Is in working shape, but some of the mounting brackets are missing (way it was bought). It is a very hot (sensitive) receiver especially on 2m!!

The 1st $600 takes it!
Postal money orders, or cashiers checks only.
Shipping included.

Source record: 98313

>
>Can someone basically give me the pros and cons of the FT-1000D
>vs the FT-1000MP?

Main difference:
1000D - older technology, discrete components, (easier to fix?) 200W TX, separate receivers tunable on different bands, crossband, has computer interface (need adapter), AC power built in, tuner built in, D has extra filters and BPF module for split receive (use another antenna for 2nd RX), diversity dual RX, simpler front panel. CW keying is better, cleaner signal.

1000MP - SMT technology, more bells and whistles via computer control, 100W TX, dual RX but only on the same band, basic filters, more DSP, runs on 12V DC.

Lot of people praise D over MP, expeditions like MP - lighter.
I have D, I will be doing some tests and comparisons with other radios.

Minor note: The 1000MP does have the computer interface built in too,
and the 1000MP's interface does NOT need an adapter - you connect it
directly to the computer.

I own neither, but a friend has one of each. If price and weight/size
were not a consideration, I'd prefer the 1000D.

I haven't 'FORCED' it on anyone!

International treaty established a capability in Morse Code as a requirement for HF PRIVILEGES. It's the LAW!

I wasn't interested in CW when I became licensed in 1954, but it was a RIGHT of PASSAGE.

Until the LAW is changed either comply or keep quiet.

CW is still FUN!

6484. FS: Uniden scanners

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-16 00:00:00 UTC
From: Donald Young <dry220@worldnet.att.net>
Message-ID: <7rrlhi$56m$1@bgtnsc03.worldnet.att.net>
Source record: 98332

For Sale:

I collect too many radios.

Uniden BC235XLT Trunk Tracker handheld scanner - comes with wall charger and rubber duck antenna - excellent condition - $165 (I bought the new 245XLT and don't need two Trunk Trackers).

Uniden BC 200XLT handheld scanner - comes with carrying case, wall charger and rubber duck antenna - while battery still holds a charge it is getting tired - could use a new battery - otherwise in very good condition - $65

Uniden BC 100XLT handheld scanner - comes with carrying case, wall charger and rubber duck antenna - needs a new battery as it no longer holds a charge - some scratches - note that it works fine if the wall charger is plugged in - $45

I have two Uniden 560XLT 16 channel mobile scanners - comes with dc power cord and mobile mounting bracket - both in very good condition - $50 each

Take all for $300! If you take all, I pay shipping. Otherwise $10 shipping.

Don N2DY

6487. Re: FT-1000D vs FT-1000MP

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-16 00:00:00 UTC
From: "Dr. Rick Olsen" <n6nr@email.msn.com>
Message-ID: <#sU0gdIA$GA.51@cpmsnbbsa03>
Source record: 98335

I have had an FT1000D for three years now and love it. I have used the FT1000MP, and enjoy the DSP feature. The FT1KD is still superior in my book for the following reasons (your preferences may vary):

True dual rx capability vs. in-band dual watch
200W output (my Henry 2K Classic X appreciates that)
Inboard PS (some folks will count that as a minus because of the weight)

That's not a big list, but it keeps me happy, HI. As for the lack of DSP in the "D" model, I have a Timewave DSP599zx outboard of the radio. I guess you could say that I have an FT1000DMP!

> Hi Michel,
thank you very much for replaying my message: your infos are very useful for me.
However I think that when you say "the DSP can be removed via a button" you refers to the NR1/2 function (noise reduction): yes, but the DSP should be also used by the AF digital filters which are activated via the low/high cut knobs. My feeling is that the DSP is always "ON" (i.e. AD/DA conversion) even with the NR1/2 disabled.
Let me now what do you think about it.

6505. TS-940S Radio Problems Help

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-17 00:00:00 UTC
From: paperpuncher@hotmail.com
Message-ID: <7rtfma$7fd$1@nnrp1.deja.com>
Source record: 98209

I just bought a Kenwood TS-940S with a problem. I bought it knowing about most of the problemS. I can't figure it out! When I first got it, you could turn it on cold and there was no audio, other than something best described as a sound like pager intermode, maybe an oscillation. Then it would warm up and POP in with a faint high pitch ping. The S meter would then have some deflection. Also when it finally pops in everything seems to work ok, but you can hear the signal equally as well on U.S.B. or L.S.B. . I'm told that if this thing goes out while your transmitting YOUR signal can be heard on both modes as well. Now it seems to come on without any warm-up, but it only has receive and meter deflection on 160, 80, 40, and 20 mtr.s, on the other bands no meter deflection and very, very faint receive. Last thing the slope dosn't seem to have much if any effect. Please, if anyone can be of assistance I would be very thankful!

Thanks in advance,
Mark/KB4EXI (PAPERPUNCHER@HOTMAIL.COM)

I have a few "COLLINS" goodies 4 Sale...
They will also be at the TRW swapmeet in the city of Manhattan Beach, California.
Cross streets Aviation Blvd, and Marine Blvd. Date 9/25/99 Saturday 7:00 - 11:00 A.M. The location of the swapmeet is 4 miles south of LAX, and 2 miles west of the (405) San Diego Freeway...Well here is the list.....

Collins 75S-3 RX winged
Collins 32S-3 TX winged
Collins 516F-2 with speaker...$1200.00

Collins KWM-2A (round emblem) S/N 36210 &
Collins 516F-2 (round emblem) S/N 60052....$2200.00
Very very clean, and all original

Collins KWM-2A (winged emblem) S/N 17829 &
Collins 516F-2 (winged emblem) S/N 15610.....$1200.00

Collins KWM-2A was converted from a KWM-2 winged &
Collins PM-2 power supply.....$900.00

Collins 312B-5 winged $800.00
Collins 312B-4 winged $275.00
Collins 312B-4 winged $275.00
Collins 312B-3 winged $275.00
Collins MP-1 $99.00

Collins 30L-1 winged $550.00
Collins 30L-1 winged $550.00

Collins 75S-3C winged converted from a 75S-3B $1100.00
Collins 75S-3B winged $800.00

Collins 32S-3 winged &
Collins 516F-2 winged..... $800.00
Collins 32S-1 winged &
Collins 516F-2 winged $550.00

Rotor control in a Collins 312B-3 speaker case. IT LOOKS VERY GOOD $175.00

Watkins Johnson WJ-8718-23 Receiver $399.00
I have a Watkins Johnson WJ-8718-23 receiver in cosmetically good to very good condition serial number 1 (ONE). Comes with a copy of the instruction manual. It lights up but needs some service, a friend of mine said the situation is

on the digital board, a little burn mark also some resistors may need to be replaced on another board connecting to the digital board. He said its defintely fixable. The case, and front panel look good, a few push buttons may need replacement. The price is $399.00 plus shipping, because it need service.
I have a very very heavy duty shipping box for it now.

Rotors...
Ham II $78.00
Brand New Hygain Ham IV (never used) $200.00
Swan 350, with 117XAC powersuppl/speaker works great $130.00
Daiwa CN-720 wattmeter/ SWR 1.8 to 150 MHZ $80.00
Palomar noise bridge $30.00
Palomar PT-340 Tuner-Tuner $40.00

I should have 6 SIX Kenwood R-5000 receivers by the swap meet excellent condition
$275.00 each.
ONE parts Kenwood R-5000 $80.00 some boards are missing. The case and the front panel are excellent....
I have 4 Sale some Very Nice 19 " Custom Rack Mounts. Color is dark grey,
and they are in excellent condition. The front panel of the rack mount
has
the opening for the radio, plus an external speaker mounted in the front
panel. It also has 2 handles. The measurement of the opening is about 10 1/2
inches in width, and 3 5/8 inches in height. The radio Does Not need to be
out of the case for installation.

They were made for the Kenwood R-5000 receiver. The height, and width
of this
Receiver is almost identical to the TS-440S, TS-430S, TS-670S so you can use
it for those models. Other Kenwood Models that have similar height, and
width are TS140S, TS-680S, TS-450S, TS-690S, and TS-570D/S. Please remember
all the models I stated above all use the same mobile mounting bracket, its
the Kenwood MB-430. So all the radios widths are the same $40.00 each

Kenwood VS-1 voice synthesizer will fit these models: $59.00 each
(TS-940S, TS-440S, R-5000, TS-711A,TS-811A, TR-751A,
TR-851A,TS-670S,TM-3530A,TM-2530A,TM-2550A,TM-2570A, and TW-4000A.

Kenwood TU-6 fits these units: (2 UNITS NEW IN THE BOX)
TH-21A,TH-31A,TH-41A, and TR-50 $39.00 each

Kenwood TU-4C fits these model this model TW-4000A $35.00 each

Kenwood YK-88C filter fits these units: $55.00 each
TS-120S,TS-130S,TS-130SE,
TS-430S,TS-440S,TS-530S,TS-530SP,TS-670S,TS-180S,TS-830S,TS-660,
and R-5000.

Kenwood YK-88CN filters fits these units: $55.00 each
TS-130S,TS-130SE,TS-430S,TS-440S,TS-530S,TS-530SP,TS-830S,TS-670S,TS-660,
AND R-5000.

Kenwood YK-88SN filters fits these models:
TS-130S,TS-130SE,TS-430S,TS-440S,TS-530S,TS-530SP, and R-5000. $55.00
each

Kenwood IC-10, chips for the TS-440S, and the R-5000 $50.00 each

Kenwood IF-232C interface unit $55.00 each

Johnsn Viking low pass filter $20.00 each
miltary brand new headsets $15.00 each

Lots, and Lots of misc stuff.....

6508. Auction: ARRL handbooks, BPL certs, more

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-17 00:00:00 UTC
From: jbr101@my-deja.com
Message-ID: <7rtp7l$ev4$1@nnrp1.deja.com>
Source record: 98212
Cross-posted to: alt.ham-radio.marketplace,rec.radio.swap,rec.radio.amateur.equipment

I have some handbooks, old BPL certificates and other misc. ham stuff
for auction on eBay.

The URL for one handbook (1975) is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=165880681

and the text is

This is an almost 25 year old Radio Amateur's Handbook that really
doesn't look it's age. Has a couple of tears along the binding, but the
contents are mint although a bit yellow on the edges. About 700 pages of
construction articles and technques; edited by Robert Myers W1FBY. A lot
of nice solid-state tranceiver construction inthis one, as well as an
above-average number of QRP articles. A nice piece of ham radio history.

Click on "view seller's other auctions" on the eBay screen to get to the
other stuff (1978 h'book, 1952 h'book, Brass Pounders Leaque
certificates, new Tek 456B scope case, unused ARRL radiogram postcards
from the 40's)

Close 9/26/99.

Thank-you.

>Are ads for Equipment allowed on these newsgroups?

Generally yes as long as the ad is brief, non-commercial and text
based.

You could also try your luck here:

http://www.whitecliffsdx.freeserve.co.uk/ar_bs.htm

It's completely FREE to use, can include photos of your kit, get's a
lot of hits and the ad can stay on as long as you like.

No catches, I'm trying to give a little back :-)

Cheers,

Jon.

Have you had recent production (exp. March 2003) Sony AA batteries heat and leak when first installed ?

To the wise: yes, they were installed correctly and no, I didn't charge them, even by accident. They were in for all of 10 minutes.

My new scanner has been mauled, the only victim of Floyd.

Laws never change as long as people keep quiet. As Americans, we have
a right, and an obligation, to speak out against unreasonable laws, even
when those laws come about by internation treaty.

This is especially true when those laws are used as a right of passage
in an attempt to exclude other Americans. And today, many CW supporters
advocate maintaining the current code requirement exactly because it is
a right of passage that excludes other Americans.

Hey Gang,
I just returned from Disaster relief efforts for hurricane floyd and I noticed something on the trip. MY DIPOLE NEEDED TREES!! I wanted to get on HF but since the location we were at didn't offer a whole lot of options to put my Dipole up for 80 meters, I didnt get a chance to get on the air.

I would like suggestions on HF antennas, mounts, and placement for HF mobile type of antennas. Like whats the best antenna and the best place to mount it.

Thanks for the help and I hope you all are having fun as well!

If you're looking to operate 'mobile' (travelling), then get either a 'screwdriver' like the High Sierra for the bumper, or a set of HamSticks from Lakewood for the roof. http://www.hsantennas.com/info/ http://www.hamstick.com/

If you're looking to operate 'portable' (camped), then rig a 'St. Louis Vertical' which can be stuck in the dirt, radials pulled out, tuned to any HF band, and operating in about 10 minutes! http://www.fix.net/~jparker/slvt.html

I have to agree with at least part of your post Stewart. I am though, without a doubt, on the other side of your position. People need to speak out if they believe in something. I think the big difference is when you speak out..you are condemning unreasonable laws and keeping Americans from what they deserve to have. When I speak out..I am condemned for being a backward thinking. hateful, old timer, who wants a code requirement only because I had to do it. My point is..if all it takes to get on HF is a check book..and to pass a written test that you have the answers to, . Then it cheapens what I and thousands of other hams have work hard to achieve. It WILL flood the bands with people (be they good or bad) with much less invested and much less to lose by poor operating habits. Many people point at the bands right now saying look at all those extras and advanced hams who operate like they are on channel 19. It is a disgrace to all hams when they act that way. But it doesn't justify letting everyone on HF because a few act like fools. The FCC will take care of those guys one of these days. Say what you will...but I say BIGGER IS NOT BETTER.

I'd rather see ham radio die a dignified death
Then see it turned into CB radio.

We all ready have a codeless HF band....11 meters

> Have you reset the CPU?

One can certainly try that. (if I recall properly, you turn the radio off, hold down "A=B", and turn it back on while holding that button) But I've found that usually doesn't help.

Bad inter-board connections and solder joints are a problem with that radio. In fact, I have a dead one right now which I may think about fixing someday... I would try reseating the little plastic connectors used for connections between circuit boards. Yes, I realize there are a LOT of them! It might also be a good idea to reseat the little gray coaxes between boards.

Good luck. These are nice radios when they work, and hurricane-strength paperweights when they don't...

I have for sale a ICOM IC-2350H Dual Band FM mobile rig.
I am the original owner and this radio looks and works
like new. It puts out 50W on 2M and 35 Watts on 440. It
includes the optional UT-89 tone Squelch board and the
UT-101 Encoder/Decoder Unit (provides pager, code squelch
and DTMF Remote functions). This radio has never been
modified, does CrossBand repeat out of the box. It is a
true dualband radio and allows monitoring both bands at
same time.

Comes with original box, manual, TT Mike, power cable and
mounting bracket

I will ship in CONUS for $275.

If interested, please drop me an email at:
sereikas@yahoo.com

Thanks and 73,

George

Chris,

its quite simple.

You broke ng rules and etiquette by posting them to a ng that does not
allow them. It would have been better to ask first instead of posting
them straight off. At least go read the FAQ for this ng, it will save
your further embarrassment.

Your argument that I didn't have to download them anyway because they
had photos marked in the text is irrelevant. I don't know what the
content of the ng is until I download the messages and then see the
titles. All I see is a larger than normal amount of time downloading
unwelcome and unnecessary photo files.

If you feel that someone pointing out your errors is rude then so be it.

As for the apology I couldn't careless either way!

End of Subject.

Bill and others.
I have had my FT-100 for several months now, and find it to be a good mobile.
I did have a problem with distorted AM audio, but checked the AM power and found it was 100 watts, got into the "private" menu, and backed it down to 25 watts, now it sounds great.
What have I compared it to? I have (still) a 706 es 706MKII. My only complaint is that the CW sidetone does not vary with the volume control. The Icom's do) I l-o-v-e CW mobile!
This will force me to use a keyer with a sidetone in it. Cannot really blame Yaesu on this, but it is different than the Icoms. Would I trade it for a MKIIG2, in a word, no.
Just ran across a nuance yesterday, while driving through lower Michigan. With the windows down in my Explorer, the compressor on, the road noise was non-existent! But, with FM, the road noise was too much for "open windows" running. So... just shut the windows when on FM.
Now I do agree with you on the "hams being beta testers", and I have owned a few in the past:
Icom 706 plain - blown diode on 2 meter side, forced to use a beefier diode
IC-2AT PL was a problem
Yaesu FT-something or other, the PL was never right (this was the two radios (VHF/UHF) in one, using some soft of "big switch box" bolted to a control panel, then the radios connected via cables, a real nightmare.
VX-5 PL scan
Icom 756, phase noise and the serial number thing.
So I guess they are all at fault.
Perhaps (Open offering to all manufactuerers) you can give us a few radios first to test, before they hit the market??
This eliminates the "bashing from Tim and others??"

Agreed.

I really failed to see anything that could possibly be construed as rude about Simon's original posting. (if that was rude, I guess I'm being rude if I tell my neighbor it's sunny today!)

Actually, Simon was being kind: he could have mentioned that for-sale items really shouldn't be in this newsgroup at all, whether they have binary attachments or not.

Message-ID: <7rua2f$9c3$1@bgtnsc01.worldnet.att.net>
Source record: 98252

I own a Yaesu FT-8000R dual band mobile. It has performed very well for me. It has a very easy to see LCD display and is very easy to use. It is no longer in production but it's successor, the FT-8100, is basically the same radio with only a few exceptions. The radio is also pretty good at rejecting intermod. All I can say is I like the radio! Just my 2 cents.

6549. Warnings & Help re. Using New FCC-ULS Filing System

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-17 00:00:00 UTC
From: DavidC <b4e@earthlink.net>
Message-ID: <7rud93$60g$1@birch.prod.itd.earthlink.net>
Source record: 98253

The most important thing Hams need to know about the
FCC-ULS system is that it is very buggy. The system is
poorly designed, obviously poorly tested, and is another
example of our tax dollars poorly spent.

That said here are some key pieces of valuable user information:

According to the FCC site http://wtbwww05.fcc.gov/
Internet access to change callsign-related information or to file
forms has been discontinued/suspended.

"Welcome to the Universal Licensing System
If you have accessed this page through the internet you cannot
file applications electronically.
For electronic filing, you must connect to the FCC's network."

You are forced to log in directly to the FCC's 800 number ... and
unless they are getting 800 numbers free this is an unnecessary waste
of tax dollars (sorry for the editorial).

*See the bottom of this text for their detailed, yet still very incomplete
and non-novice-computer-friendly, instructions.*

Once connected through their 800 number one must go to:
http://www.fcc.gov/fcc-bin/y2kchoice.pl?Tin/Call_Sign_Registration?https://w
tbwww05.fcc.gov/Tin_registration_new/

And select:

Continue on to: Tin/Call_Sign_Registration .

Then register to use the system by selecting:

( ) Register Now and click on CONTINUE.

Once you are registered
(registration requires your social security number, etc. ... yes I know this
is
an improper use of the SSN by the FCC but no one else obeys that law either)
you return to:

http://www.fcc.gov/fcc-bin/y2kchoice.pl?Tin/Call_Sign_Registration?https://w
tbwww05.fcc.gov/Tin_registration_new/

Now you choose:

( ) Update Registration Information and click on CONTINUE.

Enter your social security number and password (ignore SGIN block) and click on CONTINUE.

Make changes and click on SAVE.

You may now disconnect from the FCC. Please do so as we don't want to run up the 800 number tax bill!

... Back on the Internet ...

If you want to check your changes inside of the ULS system go to:

http://wtbwww05.fcc.gov/cgi-bin/Query_lic/Query_lic.exe?FNC=goto_query_type_
_Ahome_html

Select the default GENERAL and click on CONTINUE.

Enter your callsign only and click SEARCH way at the bottom of the page.

You will notice that a change made in one part of the ULS system doesn't make
it to another ... mine has been there for 9 days (as of 9-17-99) and still hasn't made
it! Seems along time for the electrons to travel within the same program and hardware!

You may also go to:

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

to check on your filing callsign information.

Click on CALLSIGN.

Enter your call and click OK.

Click on ULS DATABASE.

You will see your data, also from the ULS database, also not updated.

I have asked my Congressmen and the FCC to investigate why our taxpayer dollars have been so carelessly used, you may choose to do the same.

QRZ, Buckmaster and others will not update their information unless it comes from the FCC changed. Obviously the FCC-ULS system isn't working properly so their databases are involuntarily incorrect.

Hope this information (despite the editorial comments) is helpful ... 73,
DavidC K1YP

****
PLEASE FIND BELOW THE DETAILS OF HOW TO ACCESS THE
FCC-ULS SYSTEM VIA THEIR 800 NUMBER USING DIAL-UP NETWORKING
IN WINDOWS ...
****

ACCESSING THE FCC NETWORK
USING WINDOWS 95/98

These instructions describe how to access the FCC Network from a system that is running
the Microsoft Windows 95/98 operating system. This involves configuring dial-up network
access and then performing the dial-up procedure.

Configuring Dial-Up Network Access
1. To start dial-up networking:

a. Click the Windows 95/98 Start button.
b. Click the Programs option to display the Programs menu.
c. Click the Accessories option to display the Accessories menu.
d. In Windows 95, click Dial-Up Networking; in Windows 98, click Communications, then
Dial-Up Networking.

If Dial-Up Networking is not an option on your Accessories menu, you should install it from
your Windows 95/98 CD or diskettes.

2. When the Dial-Up Networking window appears, double-click the Make New Connection icon.

3. The Make New Connection window appears. In the field titled Type a name for the computer
you are dialing, type ULS at FCC.

4. Select a modem:

In Windows 95, click the down arrow at the right of the Select a modem field and select your modem from the menu of available modems.
In Windows 98, click the down arrow at the right of the Select a device field and select your modem from the menu of available devices.
If your modem does not appear on this list, you must install your modem driver according to the modem manufacturer installation procedures, which are usually described in your modem's user manual.

5. Click the Configure button. Click the Options tab at the top of the Properties window.

6. In the Connection control area of the Options tab, verify that neither option is selected. If either option is selected, click the check box at the left of the option to deselect it. Then click OK.

7. Click the Next button.

8. Type 800-844-2784 in the Area Code and Telephone Number fields. Verify that the correct country is selected in the Country code field.

If not, click the down arrow at the right of the Country code field and select the appropriate country from the menu of available countries.

9. Click the Next button.

10. Click the Finish button. An icon titled ULS at FCC appears in the Dial-Up Networking window.

11. Verify that properties are configured correctly before attempting a dial-up session. Put the mouse pointer on the ULS at FCC icon and click the right mouse button to display a menu. Click Properties from the menu.

12. Click the Server Type button at the bottom of the ULS at FCC screen.

13. In the Advanced Options area of the Server Type window, verify that only Enable software compression is selected.

If it is not selected, click the check box at the left of the option to select it. If either of the other options is selected, click the check box to deselect it.

14. In the Allowed Network Protocols area of the Server Type window, verify that only TCP/IP is selected.

If it is not selected, click the check box at the left of the option to select it. If either of the other options is selected, click the check box to deselect it.

15. Click the TCP/IP Settings button and select Specify name server addresses.

16. Type 192.104.54.1 as the Primary DNS.

17. Click OK on the TCP/IP Settings window and the Server Type window.

18. If you are prompted to restart your computer, click Yes to restart, then begin the Dial-Up Procedure.

Dial-Up Procedure
1. If the Dial-Up Networking window is not currently open, do the following:

a. Click the Windows 95/98 Start button.
b. Click the Programs option to display the Programs menu.
c. Click the Accessories option to display the Accessories menu.
d. In Windows 95, click Dial-Up Networking; in Windows 98, click Communications, then Dial-Up Networking.

The Dial-Up Networking window appears.

2. Double-click the ULS at FCC icon in the Dial-Up Networking window.

3. Click the Connect button on the ULS at FCC window. Do not enter User name and Password.

The Connecting to ULS at FCC window appears, indicating the status of your connection as your modem dials into the system. This window must remain running during your dial-up session. You may minimize the window, if you wish.

4. Once the connection is established, open your web browser.

5. In the Netsitefield of the web browser screen, type wtbwww05.fcc.gov as the Universal Resource Locator (URL). Then press the Enter key.

6. When you have finished, exit the web browser, then click the Disconnect button on the ULS at FCC window to end your dial-up session.

Smart Update
On February 26, 1999, the FCC upgraded the ULS to use Smart Update technology to provide significant reductions in the amount of time it takes to file on-line. When connecting to the ULS, the following will occur:

The ULS will automatically download two files to your Netscape directory. This will take approximately 6 minutes, during which time you will see a dialog box showing the progress of the file transfer.

Once the download is complete, you will be prompted to close and restart your Netscape browser.
Note: You do not need to disconnect your modem connection.

After restarting your browser, use the ULS to file applications in the same way that you have done so in the past. You will notice significant increases in system speed.

Important information regarding use of Smart Update:

You will need 3 MB free disk space on your hard drive.

Smart Update only works with the Netscape browser.

The file download only happens once. If you disconnect from ULS and reconnect at a later time, the system will detect that it has already downloaded the necessary files and will not perform this step again.

Note: When the ULS is upgraded by the Commission, the Netscape browser will automatically detect that it needs to update the downloaded files and the operation described above will need to be performed again. Currently, system upgrades are occuring appoximately once per month.

Technical Support

For technical assistance contact the FCC Technical Support Hotline at (202) 414-1250. The FCC Technical Support Hotline generally will be available Monday through Friday, from 9 a.m. to 6 p.m. ET. All calls to the FCC Technical Support Hotline are recorded. If you have any comments or questions about this information, you may also contact our Technical Staff by E-mail at ulscomm@fcc.gov

Hello Everyone,

I have the following for sale. All items are in very good condition or better unless otherwise indicated. I would like to sell the indicated packages as packages unless I get a great offer otherwise. Below prices include CONUS UPS shipping. Payment by US Postal Money Order ONLY, and prepaid. NO C.O.D.'s, etc. Please e-mail directly to n3fvg@worldlynx.net if interested.

ICOM HF Mobile Package - IC-706 HF/6M/2M mobile with Icom AT-160 automatic antenna tuner, OPC-599 acc cable, Comet CF-530 HF/VHF duplexer and all related standard accessories, manuals and boxes.....$ 950.00

ICOM IC-03AT 220 Mhz. HT package - IC-03AT with BC-35 desktop charger, brand new BP-7S battery, BP-8S battery, IC-DC1 Mobile Adapter, Icom speaker mic, manuals, standard accessories and boxes.....$ 325.00

STANDARD C228A 2M/220 HT with CNB-153 battery pack, rubber ducky antenna and plug in charger ONLY.....$ 300.00

BEARCAT BC-3000XLT handheld scanner, 25mhz.- 1.3 ghz. (less cellular but will receive "images), rubber ducky, ac adapter and charger, battery pack just rebuilt. Includes copy of instruction manual.....$ 225.00

RADIO SHACK PRO-62 handheld scanner, 30mhz.- 960 mhz. (less cellular and 220 Mhz. band), with optional leather carry case, rubber ducky, alkaline batteries, and standard accessories in box. Only programmed, then put back in box, never used.....$ 150.00

MFJ-989C Versa Tuner V HF antenna tuner. No original box or manual but used very little. In excellent condition.....$ 250.00

KENWOOD MC-60A amplified microphone. In box, excellent condition, no manual.....$ 100.00

KENWOOD UT-28S 10M unit for TM-641/741/642/742 mobiles. Brand new in box, never used.....$ 260.00

(1) KENWOOD MC-44 microphones, 8 pin din plug, brand new in boxes, never used....(one sold - one left).....$ 25.00

KENWOOD MC-52DM microphone, 8 pin din, back-lit ttp, brand new in original wrapper, never used.....$ SOLD

DIAMOND MX-214 Duplexer (2M/220).....$ 45.00

MOTOROLA Montana 33.6 PCMCIA Cellular 33.6 Modem/Fax with cable for connection to Motorola Cellular Phone (Sold).....$ SOLD

Unknown brand HF SWR/Wattmeter, German mfg.?, says it handles 1KW but I wouldn't try it. Probably handles 300 watts, in box.....$ 25.00

(4) JOBCOM UHF handheld portables, 2 channel, 2W, 1 channel installed, 3 on same frequency, 1 on different frequency. Easily re-crystalled. With rubber duckies and plug in chargers.....$ 200.00 for set

MAXON VHF-hi , model CP-0510 handheld portable, 4 channel - 1 installed, with drop in charger.....$ 50.00

TERMS: PREPAID only by US Postal Money Order. Prices include CONUS UPS ground shipping.

Dwight, I'll take your position for this response. It does no good to beat up on hams who love CW and see it as a characteristic of HAM RADIO. Also, it does no good to speak out against US Law in this forum. This forum lets you vent but it won't get any action. The issue is INTERNATIONAL LAW and RATIFIED TREATIES. If you really want to change the treaty, contact the FCC and/or the ARRL and get involved with the Telecommunications Union Subcommittees and start working for your position. I believe they meet every five years, I stand to be corrected on that, and they consider ALL aspects of wireless communication from dc to light.

The ARRL has a committee that works on Telecommunication Union issues relative to Ham Radio.

The US government is a regular participant in the various sub-committees.

I don't believe the laws are one bit unreasonable. You had to learn to drive before you 'earned' another "Right of Passage" (your driver's license). If you are truly motivated for HF Amateur Radio privileges then approach "The Right of Passage" as something that increases your 'Privileges". Your Amateur License is a privilege not a right..

We have to earn the privilege.

Rev. Mr. Dave Shrader, AKA W1MCE

6559. Re: Warnings & Help re. Using New FCC-ULS Filing System

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-17 00:00:00 UTC
From: David Kaye <n2sjh@worldnet.att.net>
Message-ID: <7rv3di$7cq$1@bgtnsc01.worldnet.att.net>
Source record: 98263

I changed my address for my license without a problem and received my revised ticket in less than two weeks! I think the new ULS system works fine.

Source record: 98265

A couple of comments

80 meters mobile is tough. Don Johnson, who wrote the book 40 + 5 years of HF mobile, says it takes 40 hours to have a working 80 m mobile installation. I have never achieved that state, probably because I have not invested the 40 hours. Don't assume that you can spend some money, bolt the antenna on the car, and have a good result. (40 m is not nearly as tough, and 20 m down is easy).

Remember that verticals work poorly for short distances (like a few hundred miles). For short skip propagation, the dipole is far superior. The NVIS dipole is even better (low to the ground, bounces the signal straight up). I suggest investing in a few masts, and using a full size dipole on 80m.

For a little more info on HF mobile, check my website, especially for information on HF mobile noise suppression.

Hi, Chris.
I saw your ad, earlier. I could use a parts-radio to maybe fix my 2001, but $50 is really a bit high for a nonworking radio that's 20 years old. I remember when they came out. I really wanted one, bad. I was on a trip to Fiji and they had a duty-free shop (zillions of them, actually) and the 2001 was for sale for around $200.
If you don't sell it, I'd go $25 plus $5 for shipping. I bought mine, working, for $35, last year. Please let me know if you would accept my offer. Thanks!

6570. I am looking for information on Panasonic radio

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-18 00:00:00 UTC
From: jlnordbo@facstaff.wisc.edu
Message-ID: <7rvm0q$hr8$3@news.doit.wisc.edu>
Source record: 98141

Greetings!

I would very much like to get some information on a radio I used to own. It is a 1970's era Panasonic portable. I do not remember the model number. By the description I've sent to several newsgroups and radio club sites, I've been told I am describing an RF2200 or RF1150. Now that I have seen a pictures of the 2200 and the 1150, I know that it's not either of those. The radio I am looking for is very similar to the 1150, but I think the radio I had was probably less 'upscale' than the 1150.

Below is a description of the radio I am looking for:

It is a portable Panasonic AM/FM (&SW) radio manufactured in the '70s. Dimensions are *about* 10x10x2. It was all black and had a large (about 8-9") speaker on the "front", with volume, treble, and bass knobs on the "top" (not at the top of the front side of the radio, but on the top of the radio. I can't remember where the tuning knob was--probably on the "side"--but the analog dial was on the "top". Also, the three (?four?) position toggle switch for changing bands was on the "top". It had a sleep timer down toward the bottom on one side. I think it had a squelch control knob (somewhere--on the other side??). It also had a removable and adjustable nylon handle/shoulder strap. I think it retailed for about US$99, but this is a guess.

The main diffrence that I can tell from the picture of the 1150 and the radio I had is:

Mine had:
-no rotating ferrite bar antenna -- I think it must have had only a telescoping antenna

-most controls on the"top" and "sides"; the speaker takes up most of the surface area of the "front"

-removable nylon shoulder strap (I didn't see this in the picture but I guess that doesn't prove that the 1150 *doesn't* have one...)

-all black finish

I would very much appreciate any information about the radio I have described. Specifically, the model number and if possible, information about where I can see a picture of it so that I cen tell for sure that it's the one I am looking for. Once I know

the model number, I can start 'shopping' for one.

Thanks in advance for your assistance!

Regards,
John P. Nordbo

6571. Which hf vertical ??

Hi, folks,

I'm considering the purchase of an Alinco DR-605T or a DR-610T. They each have [most of] the features I'm looking for at prices I consider reasonable.
The only feature they *seem* to be missing is the ability to be programmed from a PC.

I've looked at the Alinco-related postings in this NG (beginning on 03-APR-1999) and found some interesting information and opinions.

Has anyone had additional experience with either those two models, or with any of the rest of the Alinco mobile line ?

If so, how would you rate the units and the company ?

Thanks for any info or opinions!

I've been comparing 3 rigs, each under $500 new.

Alinco DR610DT
Kenwood TM-V7A
Icom 8100

All are comparable. My choice was the Kenwood, primarily because the remote head did NOT include the mike connection. I'm leaving the body down by the stick shift and the head vecroed onto the steering column. This way my mike doesn't get tangled in the steering wheel.

You probably won't go wrong with any of these rigs. The newsgroups will sometimes offer one for about 2/3 retail price, so patience can be rewarded.

A good friend needs the following to rescue two damaged rigs:

1. One CAR'rier module for TS-450S - OR - TS-690S (that one module is the same)

2. An IF unit for the 450S.

3. An IF unit for the 690S.

He says he's found too many virtually shorted transistors and diodes on the two IF units to successfully repair the boards (fine work has become difficult
for health reasons).

He also says both DDS IC's on the CAR unit have shorts from B+ to ground. And he doubts he could ever replace them (surface mount, PLCC -- thousand leg -- IC's).

The rigs are otherwise in nice shape and he really wants to rescue them!

You may contact JimC directly at: marijimc@juno.com or Reply to me and I will forward your E-mail to him.

Thanks! & 73, DavidC K1YP

Replace the existing drive unit with 5- 470 ohm 2 watt carbon resistors, configured
in the same way as the normal drive module is.
I feel you may have "soft" tubes, because even with normal drive module in there,
the amp should hit 1500+ output, with only 80 watts drive.

N3XBU wrote:

Look, I don't want to get into a huge debate about CW. There is already enough of that in these newsgroups already.

I'm sorry if others have "condemned" you for speaking out in support of CW. I certainly have not done that. And I understand your concerns about the bands being flooded with people who don't care as much for radio as you do and might turn ham radio into something similar to CB. However, I truly don't feel that is a ligitimate argument.

There has been no CW testing requirement for access to the VHF and UHF bands in nearly ten years. And even though there has been a large increase in the numbers of new operators using those bands, there has not been a significant problem with the foul language, fighting, and poor operating practices, often associated with CB.

Dropping the CW testing requirement for the HF bands is not likely to bring that many more new people into ham radio then there already is. In reality, the overwhelming majority of the new HF operators would be the current VHF/UHF operators who finally upgrade their licenses. And there is no reason to believe that these operators would act any less properly on the HF bands than they already do on the VHF/UHF bands.

So, from my perspective, the only thing that the CW testing requirement does is keep the current VHF/UHF operators out of the HF bands. And I really don't want to believe that HF operators hate the current VHF/UHF operators so much they are willing to keep an arbitrary testing requirement in place just to keep them out of their bands.

I also understand your feelings that eliminating the CW testing requirement would "cheapen" the license that you had to work hard to get. However, times change, Tim. CW is no longer a necessary part of radio communications. You cannot honestly expect people to learn CW today, and forever into the future, just because you once had to do it.

Good luck, Tim. I honestly hope the best for you as the future unfolds.

My Kenwood TS-440s has a very loud buzz when listening on the headphones. I have been told that my transmit audio has a loud buzz at times. When listening on the headphones, if I push the "Enter" switch for directly entering the frequency the frequency display show "--.---.--" and the buzzing stops. Must be noise from the display circuit getting into he system. Any ideas?

I disagree, Dave. Before laws can be changed, people have to talk
about them. These newsgroups are as good of place as any to do that.

> The issue is INTERNATIONAL LAW and RATIFIED TREATIES.

Bad laws are bad laws, even if they came about through international
law and treaties.

> privilege not a right..

The automobile license is not a good example, Dave. When I took my
driving test, I studied information that was necessary for me to
properly operate a motor vehicle today. I did not have to learn about
things that was necessary to operate a motor vehicle 50 years ago
(unless it also applies today).

And, even with our crowded streets, the government does not include
arbitrary requirements in that driver's test in an effort to keep people
off the highway. That same government should not keep arbitrary
requirements, such as code testing, in the ham license exam in an effort
to keep people out of ham radio (which is exactly what many HF operators advocate).

I have a variety of TenTec goodies for sale.

TenTec 225 Power Supply. Good for 9 or 10 amps
at 13 V DC. Made to match the Argosy, or can be used with
other radios. Includes over voltage and over current
protection. Manual included for $ 100.

TenTec 218 filter, 1800 Hz, for 9 MHz IF. Can be used
in the Argosy, Omnis, and any of the TenTec rigs using
a 9 MHz IF. In the box, for $ 70.

TenTec 280 heavy duty 20 amp, 13 V DC power supply
ammeter, manual, presently has connector for
Kenwood/Icom, but can easily be changed to
whatever connector is needed. With manual for $ 135.

Prices do not include shipping from Florida.

Thanks.

stewart@amouse.net writes:

>> The issue is INTERNATIONAL LAW and RATIFIED TREATIES.

> Bad laws are bad laws, even if they came about through international
>law and treaties.

In addition, treaties do change with time. The treaty that requires
Morse code knowledge for amateur access to HF is an ITU treaty.
As I understand it, a number of years ago the ITU sent a letter to
various national radio bodies saying, essentially, "Do you believe
that Morse code proficiency is still necessary for amateur HF access,
now that all other services have abandoned Morse code?". So the
ITU recognizes that perhaps it's time to change this.

In Canada, the RAC (the Canadian national amateur organization)
discussed it and replied, essentially, "No, it doesn't seem to be
necessary". The similar organization in the UK also agreed that
it was no longer necessary. I think the Australians have also
reached the same conclusion. But the ARRL polled its members and
then said that the code test should remain.

Some of the difference seems to be in the interpretation of the
question. The ITU didn't ask for a *poll* among existing hams, which
is what the ARRL did. They asked if there was any real justification
for continuing testing. In the Canadian case, the RAC concluded that
although a lot of their members said they wanted continued code
testing, they could see no actual compelling *reason* it was necessary
any more.

I expect that when the ITU does eventually discuss this matter, unless
the pro-code-test advocates can come up with a compelling *reason*
why it is necessary, the ITU requirement will be history. The USA
can still decide for itself that its own tests will still include
code testing, of course - but then it will clearly be a US-only
decision.

In the meantime, I find it strange to see hams in the USA quoting
the ITU treaty as the reason that there must be code testing, when
the USA is one of the main countries blocking a change.

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling
1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped). If you
are interested in over 12 issues or the entire collection, make me an offer. I am willing to ship anywhere on
this planet so long as you are willing to pay the shipping costs.

Here are the issues that I have:

QST

1992 Jan - April $1.00 ea.
1993 Jan - Feb & April - Dec $1.00 ea.
1994 Jan - Oct & Dec $1.00 ea.
1995 Jan - Dec $1.00 ea.
1996 Jan - Dec $1.00 ea.
1997 Jan - Dec $1.00 ea.
1998 Jan - Dec $1.00 ea. (May issue is missing page 73)
1999 Jan - Current $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last
time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.
If you would like to check my references, please feel free to do so. I am on Ebay and my user ID is: Andrew45

Yep:

I have a Motorola UHF 430-470 Mhz Range SystemSaber lll. As a bonus
its a Securenet Radio.

Model H44TUK5170CN
Serial Series 500AUYXXXX

Picture @ http://www2.4dcomm.com/metrotech/ssaber.jpg

This is a radio that has Never been palced in field service, so its in perfect
condition with all the Model / Serial tags in perfect shape. So if you are
looking for one of Motorolas Best UHF radios (I believe it will do UHF
trunking too) This is the ideal radio for you. Measured over 6 Watts of
power with a Standered Battery. Also comes with a Battery that has been
unused. Has 160 channel capicity. Also I can have a few channels programmed
for you if needed.

Asking $785.00 + $10.00 for shipping and handling

If you want the Smart Charger, will supply for a extra $60.00

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate
shipping is desired) or a Personal / Business check is A-OK too if you do not
mind a Short Shipping Delay due to bank processing time. This is required only
the first time or two as once you are in the data base, PrePayment is no longer
required

Monty

It is usual that the digital camera records on a removable card. In this case a 2 M card.

Connect the camera to the serial port of your PC and transfer the images to the hard drive. Quite slow usually but works well. Of course, the software that the ad mentions is that to make the transfer which must be loaded on your PC.

Erase the camera memory and take more pictures.

Dave,
A lot of folks here bash Chushcraft, and the R7000 may deserve it, but the older R5 and R7 are decent antennas when assembled and mounted properly....you should be able to pick one up used for about $100....

Sorry Dwight..we'll just have to disagree I guess. Although you did prove me right with your last paragraph...you just had to say I think people must learn cw because I had too. I know alot of people disagree with me..but believe me many disagree with you too. There is a big difference with the way a ham will operate on vhf/uhf where fox hunting is down to a art of almost a straight drive to the lid. On hf as you know it gets very difficult indeed to find someone with little to loose and little value in the ham license they didn't have to work much for. If you think bigger is better at all costs..then we can disagree about that also.

I'd rather see ham radio die a dignified death
then see it turn into channel 19

Real Ham's have always known code..its just a fact

Let the flames begin... :-)

It was originally an actual Astron question which I even replied to with
some facts about Astron supplies. Somewhere along the line someone
mentioned CW testing and the debate started.

From: Randy Nowell <nowell@mediaone.net>
Message-ID: <WNYE3.1460$OT2.48203@wbnws01.ne.mediaone.net>
Source record: 98188

There are many, many web sites where you can easily conduct very complicated transactions, pay bills, purchase goods using a credit card, etc., in a relatively secure environment. Most people, including me, have never had a problem. All with a few clicks of the mouse.

Why has the FCC produced such a complicated procedure involving re-configuring your computer several times, that, from all accounts and procedures I've read, sounds like a disaster waiting to happen? This new "system" sounds very *non* user-friendly and hardly geared to a novice computer user. I cannot understand implementing such a system when the rest of the world seems to be light-years ahead of them.

Just my two cents. 73s, Randy, N1ZUO.

Hi All,

I have a UHF, 440 to 470 range Motorola Saber 1E. This unit has 12 channels with repeat and direct, or 24 channels with 2 zone operation. The unit is an 8D core, so you are getting the highest signaling level available on a regular Saber radio.

I am looking for $350.00 plus shipping for the radio, battery and antenna. Please reply via E-Mail.

Thanx
Mike

Just need one more Motorola UHF Maxar
50, PL type radio, to complete our 440 link
project. Wouldn't mind having 5 or 6 extras
though as spares.

Ok if these units are missing the microphone,
power cords or mobile bracket (accessories).
Please dig around and see if you have this older
1 or 2 channel crystal, compact UHF mobile in
your, junk radio box.

Poor cosmetics ok, but it MUST BE WORKING,
must be UHF and PLEASE, it MUST BE A Motorola
MAXAR 50!!

Also please, DO NOT POST REPLIES here on
the N.G. Contact me PRIVATELY by E-Mail or
telephone with any information you have.

All reasonable, current fair market value
offers, accepted.

Thanks for reading;

6628. FS Kenwood TS-450SAT $675. U.S.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-18 00:00:00 UTC
From: Michel Morin <morinm@csdgs.qc.ca>
Message-ID: <ftDE3.1143$j6.24850@carnaval.risq.qc.ca>
Source record: 98277

It is the model which replaced the TS-440 in the Kenwood line and added some goodies.Here is a summary:

Covers all the hf bands including WARC in transmit.
General coverage receive from 30 khz to 40 mhz.
Double conversion receiver with IF's at 8.83 mhz and 455 khz.
Can hold 3 filters, 1 SSB + 1 CW in the first IF, 1 CW in the second IF.
Filters are selectable on front panel with lighted indicators.
Has RIT and XIT, 2 noise blankers, IF shift, notch filter, squelch.
Has 2 VFO's so it can operate split even using 2 bands.
Has 100 memories and lots of scanning options.
Double frequency display, when operating split or using RIT or XIT.
Has AIP to reduce interference.
Modes are SSB, CW, AM, FSK amd FM.
100 watts out all modes except AM which is 25 watts.
Antenna tuner which covers all the bands and works very well.
Keypad for entering frequency directly.
Menu system with 42 functions.
Can be programmed with a computer with an available interface.
Has fine tuning at 1 hz and display shows to 10 hz.
Has fast tuning at 1 mhz, can be changed in the menu.
Can control a linear with a back panel jack.
Has indicators in the display for every function selected so you are not lost.
Scan function is very complete with adjustable speed.
Of course, it has a fully adjustable VOX , power and CAR controls.
Semi or full break in in CW. RTTY terminal on back panel.

As you can see, this radio is very complete and it never had the problem that all 440 have, meaning the display problem. The serial number is in the 50 millions which makes it a late unit. It has a 1.8khz narrow SSB filter installed in the 8.83 mhz IF section which leaves place for 2 CW filters. Included is a Midland desk microphone, power cable and the 2 instruction manuals. The second one is the EXTERNAL CONTROL manual for controlling the radio by computer. I hope this answers most of your questions and have a nice weekend. Inquiries by email please.

73 de Michel Morin.

Greetings Dave..

Decisions, decisions! Searching the Web I came up with a few Web sites
that you may want to look into..

Mosley's even getting into the act:
http://www.cqcqcq.com/vertical.html

An index to Butternut antennas is at:
http://www.bencher.com/ant_select.html
Use the pull down menu (arrow pointing down).

I've personally own and have had very good luck with the HF6V.
http://www.bencher.com/hf6vx.html

Some info. on the Gap antennas:
(these have gotten some press over here but they are a LARGE (tall)
antenna)
http://www.gapantenna.com/
http://www.poncede.com/newpage4.htm

Even product reviews in QST on a few of the Gap antennas:
http://www.arrl.org/ncj/index/prodrev.html

After mounting and (unfortunately) owning a few Cushcraft products, I
can honestly say that, at least in the past, their antennas were the
most flimsy antennas that I've ever come across. Further, attempting
to get parts for their antennas they no longer sell can be - if not
impossible nearly so.. I've had conversations with amateurs waiting
for parts from them on the order of *months*. However, I will say,
good deals can be made for used antennas from *any* manufacture. I
just personally won't consider their products in the future. They're
the YUGO of antenna manufactures.

Cheers,
Gary

Source record: 98043

I agree 100 %. remeber all the Kenwood
TS-570 D that had the backup battery die after a couple months. Kenwood said the change the battery with the radio on etc and the real fix came many months later.
Oh yeh, The Yaesu FT-900 that would just shut off itself. The fix came out after a year and it was a new cpu etc in the control head. Yeah I guess the list goes on and on. To sum it up...if you have to be the first guy on the block to own the radio you are
: 1) going to pay top $ for the radio and should accept that the price will come down a lot.
2) you chould expect to send the radio back and forth to the manufacture to get fixed or upgraded etc.
3) BUT you get to be the BIG SHOT who is the envey of all the other guys on the group (sort of a celebrity).

my 2 cents, TIm

6646. SWR Problem on Larsen Glass-Mount Dual-bander

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-19 00:00:00 UTC
From: gary.pearce@ipass.NO-SPAM.net
Message-ID: <37e53efd.3396599@news.rdu.bellsouth.net>
Source record: 98047

I just installed a Larsen Kulglass dual band glass-mount antenna, and I've got an SWR problem that somebody else here may have solved.

The antenna achieves a good match on two meters just below the band, at 143 MHz. But between 147 and 148 MHz, the SWR is quite high. With 40 watts forward, I measured 10 watts reflected on a Bird Model 43 watt meter.

On 70 cm, the problem is reversed. The best match is around 450 MHz, with a high SWR at 442 MHz.

It's like the antenna is too long for VHF, but two short for UHF. This antenna is supposed to be "factory-tuned," so no adjustment should be necessary.

Suggestions welcomed,

73,
Gary KN4AQ

You are correct except for the R7000. It is GREATLY improved over the
previous vertical as far as strength goes.
It can be HELL to get it to work on all bands though and they do try to help
you but in the end, you are VERY lucky if you get good SWR on all the bands.
That may be true of all the verticals, not sure?

6650. Re: Which hf vertical ??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-19 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7s3jdq$f2u$1@news.hawaii.edu>
Source record: 98051
Cross-posted to: alt.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

Consider building a vertical yourself. Dozens of articles have appeared over the years in the various magazines and books. I just randomly pulled a book of the shelf (ARRL's Understanding Amateur Radio) and found an article on constructing a vertical, using three 10-foot aluminum sections, each with a tapered end to fit snugly into the next; sheet metal screws would insure a good electrical contact over time. A 30-foot vertical with lots of ground radials will load up on any band (except maybe 160), using a tuner.

As a young pup, I loaded up a (grounded) street light pole using a gamma match. Worked the world with it and 25 watts (CW, of course).

Don't be surprised that you can turn out home-brewed gear that will rival the performance of commercially-built equipment. Plus, the knowledge you'll gain will be priceless. (And you'll have fun, too!)

I realize you're in the U.K., but for U.S. amateurs reading this, lest we forget, our charter encourages us to do some building:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur radio service having a fundamental purpose as expressed in the following principles:
(a) Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules which provide for advancing skills in both the communications and technical phases of the art.
(d) Expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance international goodwill.

Interesting.... About four months ago, I was looking for the exact antenna, but when I went to my distributor, I was told Larsen discontinued the dual band through glass antenna because they were having lots of problems with it. I'd expect this might be the case. Contact them directly for any recourse.

6653. FL2100B-Tuning Up-Help!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-19 00:00:00 UTC
From: Alin Lutz <alutz@sympatico.ca>
Message-ID: <BdeF3.45998$aX6.65506@news20.bellglobal.com>
Source record: 98054

Hopefully someone can help. I am a little confused with the operating instructions for the FL2100B.
It says
"Turn on the exciter and increase the exciter output while not exceeding 0.2 Amps plate current and tune the plate control for dip in the plate current.Alternatively adjust the plate and loading controls while increasing the exciter power in small increments until maximum RF output occurs at 0.5Amps plate current."

My question is why do they say do not exceed 0.2Amps plate current and in the next sentence they indicate that adjustments should be made till max RF output occurs at 0.5Amps plate current.what do I do, increase until plate current is at 0.5Amps or stop at 0.2Amps?

Thanks
Alin

6654. FS: Yaesu FT-107 / FP-107E

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-19 00:00:00 UTC
From: W4UDX <W4UDX@juno.com>
Message-ID: <37E57122.D64623D2@juno.com>
Source record: 98055

For Sale:
Yaesu FT-107 HF transceiver and matching FP-107E external power supply / speaker. This radio is
totally solid-state with analog and yellow LED digital frequency display. This radio gear has beige front
panels and matches well with most computer gear. Radio works great with 100W out on all bands 160-
10 (pre-WARC). Rated at 240W input 100% duty cycle. Super clean and in excellent shape electrically
and cosmetically. Has CW filter installed. Original manuals and hand mic. This is a base HF radio.
I will include a nice Shure 526T desk mike with a Heil cartridge installed. $400 plus shipping
Email: W4UDX@juno.com
Some of the features are:

LSB, USB, CW-wide, CW-narrow, FSK, AM modes
Adjustable RF Speech processor w/ compression control
Very effective adjustable noise blanker
IF width control
adjustable Audio Passband Filter control
adjustable Notch filter
AF gain, RF gain, VOX with controls
RIT, XIT. 12 tuneable memories with optional DMS unit
Calibrator osc.
160-10M (no WARC) and 5MHz WWV
SWR FWD set control
Lots of rear panel jacks for connections of alot of goodies

Meter Functions:
IC (Collector Current)
VCC (Collector Voltage)
ALC
Compression
Foward RF (SWR SET)
Reflected RF (SWR Indicator)

I bought this gear because it matches with my computer gear. Now I am moving up to
a laptop, so I am looking for an Icom IC-740 and PS.

If you want to see what one of these look like, go to:
http://www.geocities.com/CapeCanaveral/Galaxy/6020

The reason you start at 200 mA is to keep the tubes from overheating when out of resonance. Once you get an approximate tuning it's okay to let the current increase to a half Ampere.

Mark,
Yes, keep us posted. BTW, what was the original problem (I may have missed the post)>? Also, did you send it to Kenwood East or West? Did you consider an independent such as Clif Holland at AVVID in Texas? I have not been too impressed with the tech support folk at Kenwood (and yes, they will be expensive) but I have found Clif it be informative, knowledgable, and helpful. Just my experience.

6660. Re: NEW 10 METER RADIOS...JUST FOUND EM

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-19 00:00:00 UTC
From: Stephen Mitchell <smitche1@san.rr.com>
Message-ID: <%kgF3.11145$iy.334693@newsr1.san.rr.com>
Source record: 98061

I was interested in the radios being offered by RF Limited as well. I have an FT-100 mounted in the truck but I've been considering taking it out and using it as a base/portable unit. I've found that I just don't use it on the lower bands enough to really justify having it. I'd put my old HR-2510 in the truck but it's not possible to do with the dash layout and the new 10 meter mobiles being offered by RF Limited will have a remote faceplate ability. I recently e-mailed RF Limited asking for a catalog (about two weeks ago) and I still haven't gotten one. Something that might be of interest to everyone here is that RF Limited is working on a 10/6 meter dual-band, all-mode mobile. I don't have any specifics on it (i.e. whether it will be a true dual band or one band at a time). Supposedly it will be available sometime in the spring.

Post for a friend who has two very clean Icom HF radios for sale. 100W

(1) Icom 707-100W HF radio for $370. shipped
(2) Icom 737+ matching power supply+ one CW filter+ Heil Mic element #4.
$720. shipped
There are no scratch on both radio, excellent conditions. Good audio.
You will like it for sure.

Pls reply at ykao@worldnet.att.net or call Tom at
718-359-4321 #223 73

Can anyone tell me if they have experienced lower high power out of the box? Mine is showing 45 at 144 to 48 at 147.99. Is there anything to watch out for opening this rig up? My old 228H was easy and the manual told you what to adjust. This one's manual does not. Any tips? All help appreciated. Michael, WI4NDS.

Alin,

I have an FL2000B, and the reason why they suggest having lower drive
power during initial tune-up is that there is a a potential to really
overheat the tubes and generate very high RF potentials in the tank
circuit. For example, if you have significant errors in the loading
control, you can get a very bright (and startling!) flashover to ground
from the pi output coil.

6666. TS-940S Problems..

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-19 00:00:00 UTC
From: paperpuncher@hotmail.com
Message-ID: <7s1kil$4o$1@nnrp1.deja.com>
Source record: 98097

Well thanks for the replys on possible fixes for my TS-940s. I boxed it up today to ship to Kenwood. I might be able to eventually find the problem, but I lack some test equipment and knowledge to align the thing. This way I'm having them fix it, set it to factory specs, and replace the batteries if needed. Hopefully not too expensive! I'll let everyone know by posting it what I find out. I did look at the service bulletins at Kenwoods communications web page, that was rather interseting. Hopefully have the information to post soon.

I bet the US would end code testing after such a decision, anything
else would leave code testing in a very vulnerable position.

6670. WTB UHF repeater

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-19 00:00:00 UTC
From: Joe <syarc@juno.com>
Message-ID: <cjXE3.2784$xA5.6039574@firenze.visi.net>
Source record: 98101

Looking for a turn key UHF repeater for ham use on 448/443 MHz for new club.
I do not have duplexers. A "split" GE mobile is about right. 40-80 watts is
fine. Must be in good, ready to operate condition.
Joe/N3ELM
syarc@juno.com

6671. FS Kenwood TS-450SAT $675. U.S.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-19 00:00:00 UTC
From: Michel Morin <morinm@csdgs.qc.ca>
Message-ID: <BgYE3.1458$j6.29618@carnaval.risq.qc.ca>
Source record: 98102

It is the model which replaced the TS-440 in the Kenwood line and added some goodies.Here is a summary:

Covers all the hf bands including WARC in transmit.
General coverage receive from 30 khz to 40 mhz.
Double conversion receiver with IF's at 8.83 mhz and 455 khz.
Can hold 3 filters, 1 SSB + 1 CW in the first IF, 1 CW in the second IF.
Filters are selectable on front panel with lighted indicators.
Has RIT and XIT, 2 noise blankers, IF shift, notch filter, squelch.
Has 2 VFO's so it can operate split even using 2 bands.
Has 100 memories and lots of scanning options.
Double frequency display, when operating split or using RIT or XIT.
Has AIP to reduce interference.
Modes are SSB, CW, AM, FSK amd FM.
100 watts out all modes except AM which is 25 watts.
Antenna tuner which covers all the bands and works very well.
Keypad for entering frequency directly.
Menu system with 42 functions.
Can be programmed with a computer with an available interface.
Has fine tuning at 1 hz and display shows to 10 hz.
Has fast tuning at 1 mhz, can be changed in the menu.
Can control a linear with a back panel jack.
Has indicators in the display for every function selected.
Scan function is very complete with adjustable speed.
Of course, it has a fully adjustable VOX , power and CAR controls.
Semi or full break in in CW. RTTY terminal on back panel.

As you can see, this radio is very complete and it never had the problem that all 440 have, meaning the display problem. The serial number is in the 50 millions which makes it a late unit. It has a 1.8khz narrow SSB filter installed in the 8.83 mhz IF section which leaves place for 2 CW filters. Included is a Midland desk microphone, power cable and the 2 instruction manuals. The second one is the EXTERNAL CONTROL manual for controlling the radio by computer. I hope this answers most of your questions and have a nice weekend. Price includes shipping and insurance. Inquiries by email please.

6673. Discontinued Icom BP-121 battery pack?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-19 00:00:00 UTC
From: dhughes@prairienet.org
Message-ID: <tsYE3.409$%K6.57@firefly>
Source record: 98104

At a hamfest today, a battery dealer told me that Icom had recalled the IC2Ia radio, and that it was difficult to find a battery pack (BP-121) for this radio.

Is this true? Does anyone have a used pack they would like to sell? Or would Mr. Nicad be a good source?

Thanks for any help,

---Dan (please email me at dan@soltec.net --thanks again).

I own 2 Alinco DR590T's, used to have a DR605TQ, and I just bought a DR600T.
The 605 is a budget radio, but a very good performer, it just lacks some of
the functions that I like in a radio. The 610 is the updated version on the
590/600 series, a very rugged radio with all the features a person really
NEEDS in radio. I have dealt with Alinco service and found their work to be
of quality, done in a reasonable amount of time and at market rates (when
out of warranty).
I have nothing bad to say about the company.

What's the best Y2K handheld ham radio,

Yaesu FT51 HP

ICOM 32W

or

???

Is it true the Yaesu is not mil-com std?

Does the Yaesu have as much alternative frequency capability as the ICOM?

Thanks.

Handy Talkie Deal.....follows
Kenwood 78a HT for sale or trade.
Radio condition Operation is fine. Cosmetics buttons and knobs fine, paint has been removed from the rear heatsink area to produce a shiny effect. It could be repainted.
Accessories:
1. Kenwood remote control speaker Mic.
2. Kenwood Vox head/Mic set
3. Three batteries 2each nicad 1each nickel. All seem to be in good shape.
4. After market slow drop in charger
5. Manual
6. Short'n filtered lighter plug in for 12v usage.
Well that's the best I can do to describe, so here is the bottom line.
$318.00 and that will cover shipping

2m Moblie Deals...follows
1. Alinco 110 Unique colorful display LCD 45Watt High.
Have Manual and Mobile Bracket. $135.00
2. Kenwood TR-7400A 2m 25 Watts High
No frills but darn good radio. $85.00
3. Heathkit 2036 10 Watts High Mobile Bracket
This radio has a tuff time with TX above 147.750 I fell it need a adjustment
Also someone put a BNC antenna connection on it. Although it works OK otherwise.
$50.00 fixer upper.
Item "1 & 2" are in good shape as far as looks are concerned, if that is important to you.
I do smoke but, I have never set the radios on fire even once.
Shipping style is up to you especially because the tab is going to be paid by you.

My wanted list in a nutshell.....

If you don't like spending your hard earned money offer me a trade.
If you've got one of those way cool dualband mobiles or state-of-the-art 2m rigs and it's collecting dust, make me a offer.

Don't be shy, worst that could happen, I'd say NO.....

Hello

I have done little software for PIC-processor. It reads data
from Icom CI-V bus and controls 10 I/Os depending used
frequency (purpose is control antenna switch, band switch in linear
etc.)
It works very fine with my IC706MKII. My friend have IC725 and
with that rig there is some strange problem:
Protocol of CI-V should be FE FE to-addres from-address.
My friends 725 won't understand CI-V command if from-address is
something
else than 28Hex, which is the same address than 725 have!?!.
Strange, isn't it?
Have anyone else found this kind of problem before?

I'll second Toms' statement about the R7000 and the older R5 and 7.
I have a 7000 lying up in the attic, brand new that isn't any good. It
won"t tune any place because I don't have a vacant field with nothing in it
to put the antenna in. I do have an R5 that has been up for over 8 years
though. The XYL got her General class ticket around 1 1/2 years ago and has
DXCC, WAS and a bunch more on it using 100 watts into it. I wouldn't sell
it for 1000 bucks. The R7000 is for sale though, name a price, you all ship
who wants it.

I have a like new condition ICOM IC-3230A Dualband transceiver
Rig has more bells and whistles than can be summarized here but
in summary the rig is as follows:
Receiver coverage: 118-174MHz, 320-480MHz and 830-950MHz
Transmit coverage: 136-174MHz and 400-480MHz
CTCSS (PL) tone encoder
DTMF/Remote Control Microphone
Power Output (3 selectable settings): 25/10/1 Watts
Cross band repeater capability
Demensions: 5.5W x 1.6H x 6.5D inches

Bought a new car and decided not to deface it with a radio.
Prefer trade. Not much for cash deals but reasonables offers
will be considered.

If you don't mind stretching out radials, perhaps you could find a
Cushcraft AP8A quarter wave vertical. I've always found that these
antennas work better than (IMHO) the "gimmicky" half-waves such as the
R5, R7, and R7000. The AP8A also tunes up very nicely on 75 meters
(mine is tuned for 3850 to 3880 and exhibits a good < 2.00:1 SWR match
over this range. Mine covers the full 40 meter General voice portion
with about a 1.7:1 SWR. 20 and 15 are also good for the full band.
Mine doesn't exhibit a good match on 10 meters however. I've had my
AP8A mounted on the roof and on the ground. It works very well in
both places. I've been using it for about 10 years. I run a Drake
7-line station, sometimes with full legal limit. The AP8A works fine
handling the power. The full instruction manual for all Cushcraft
vertical antennas (including the AP8A) can be found on their web site.

> who wants it.

I had the R5 and it is a FB antenna. To get 30 and 40m -- I replaced it
with an R-7000 and it works fine. A tip on tuning --- don't have the
mounting mast extend above the mounting bracket!!! Messes up the tuning
big time. Mine is nestled between 3 palm trees (HOA here) which changes
the tuning a bit -- but tunes all bands after readjusting -- no
problem. Seems to have a nice low angle of radiation -- so have worked
quite a few DX stations with it.

Wouldn't advise using a tuner to extend the bandwidth while running high
power though -- some folks here have had problems doing that.

I appreciate the replies here and the replies in e-mail.

The aspect of PC-programmability is nice but the full-duplex
cross-band repeater functions will be more useful to me.

As most of my driving is in New England and to the Southeast to see
relatives, I think enough repeater frequencies can be programmed into
the rig to be satisfying :)

Looks like the next trip to HRO will relieve them of a 610 :)

> coaxes between boards.

It's probably not the connectors or coax...those fixes got some credibility
from the flexing of the boards while pushing on the connectors. The
consistant problem with the 940 is the lack of plated through holes and the
phenolic ckt boards. The through wires pull away from the solder connections
when the boards heat and cool. Look in the failed area, car 1, car 2, etc.
for a solder crater where there is a black circle around the wire. That wire
has pulled loose from the solder crater. I think that is 90% of the problem
with the 940. There was also the eprom socket, etc., but these problems are
addressed in Kenwoods web site in the service bulletins.

Just bought one a couple months back. You get basic instructions on how to adjust the paddles to suit your taste and feel. As far as hooking it up, it is pretty straight forward. You will need to buy some 3 conductor line. (Got mine from work.) And a stereo plug that you can buy at Radio Shack or other chain store. Just solder the leads to the plug and match it to which side of the paddle you want to perform dits and dahs. You also get an allen wrench to perform fine adjustments. If you want some more information and you have more specific questions feel free to email me.

Hi Buzz!

Had an Icom 25A for a few years. Here's the rundown. FM only, 25 watts out, 2 VFOs, 5 memories (had to keep the power on the rig to maintain memories), designed as a mobile rig (small for its time). Red LED display (hard to read in direct sunlight), and built like the proverbial outhouse!

I had one for quite a number of years before I went to a dual band rig.

Hope this helps and

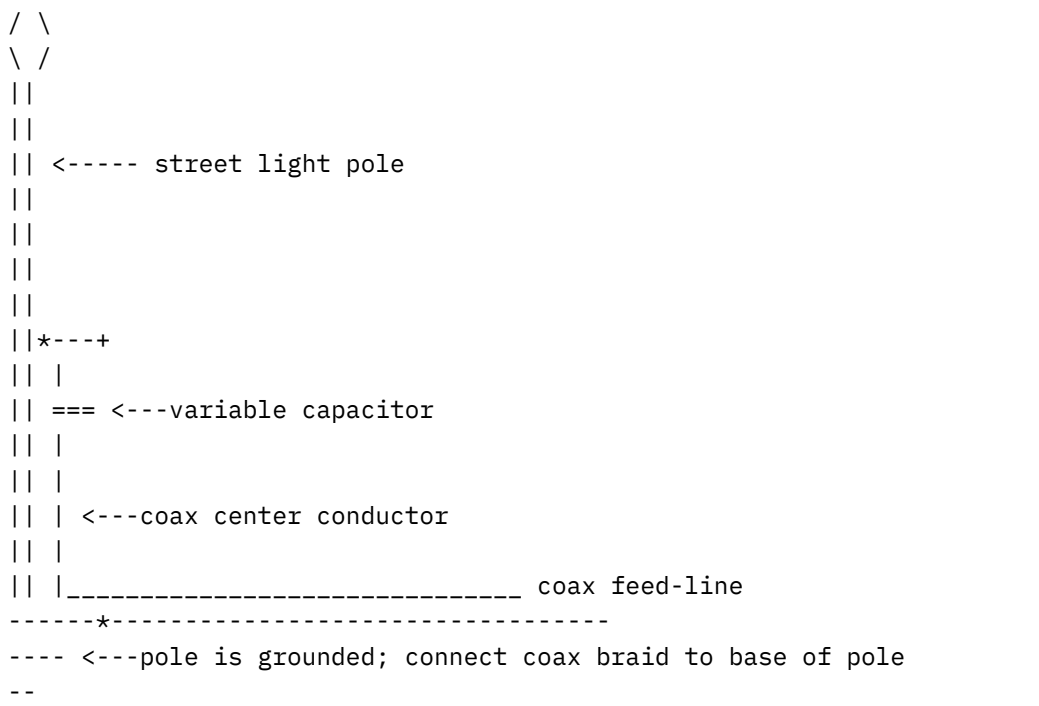
>Please describe the Gamma Match and how you connected
>it. I have a light pole in my yard.



street light pole
variable capacitor
coax center conductor
coax feed-line
pole is grounded; connect coax braid to base of pole

The tap-point on the pole where the feed-line's center conductor is
attached can be found by trial and error. The variable capacitor tunes
out the inductance of the center conductor's arm.

You can find the specific details of the gamma match in the antenna
manual you use for daily reference.

>As a young pup, I loaded up a (grounded) street light pole using a
>gamma match. Worked the world with it and 25 watts (CW, of course).

THIS is **GREAT**! I'm still laughing about this one.. Why? I'm picturing ole' Archie Bunker next door cursing the TV saying "Edith! where's that interference coming from? Jeesh!" as he looks outside up at the neighbors roofs. Hmm.. No new antennas.. Meanwhile, you *could* have been sitting in at the bench transmitting a KW through a light post! LOL !

Actually, as tall as they are - I could see where they could be an excellent antenna. The only potential problem is the mercury vapor lights *can* cause RF havoc (noisy) depending on their age and how well they've been installed. Additionally, the wiring to the light would have to be electrically isolated from the metal housing - you certainly wouldn't want the lamp post to be grounded if at all possible.

Great idea though - especially for the apartment / condo / townhouse folks.

Cheers,
Gary

Handy Talkie Deal.....follows
Kenwood 78a HT for sale or trade.
Radio condition Operation is fine. Cosmetics buttons and knobs fine, paint has been removed from the rear heatsink area to produce a shiny effect. It could be repainted.
Accessories:
1. Kenwood remote control speaker Mic.
2. Kenwood Vox head/Mic set
3. Three batteries 2each nicad 1each nickel. All seem to be in good shape.
4. After market slow drop in charger
5. Manual
6. Short'n filtered lighter plug in for 12v usage.
Well that's the best I can do to describe, so here is the bottom line.
$318.00 and that will cover shipping

2m Moblie Deals...follows
1. Alinco 110 Unique colorful display LCD 45Watt High.
Have Manual and Mobile Bracket. $135.00
2. Kenwood TR-7400A 2m 25 Watts High
No frills but darn good radio. $85.00
3. Heathkit 2036 10 Watts High Mobile Bracket
This radio has a tuff time with TX above 147.750 I fell it need a adjustment
Also someone put a BNC antenna connection on it. Although it works OK otherwise.
$50.00 fixer upper.
Item "1 & 2" are in good shape as far as looks are concerned, if that is important to you.
I do smoke but, I have never set the radios on fire even once.
Shipping style is up to you especially because the tab is going to be paid by you.

My wanted list in a nutshell.....

If you don't like spending your hard earned money offer me a trade.
If you've got one of those way cool dualband mobiles or state-of-the-art 2m rigs and it's collecting dust, make me a offer.

Don't be shy, worst that could happen, I'd say NO.....

Everything in these newsgroups is about morse code, Mike. In fact,
its even spreading out into other areas. When I went to the gas station
recently, I had to answer ten questions about code before the pump would start.

Recently, even presidential candidates were asked their position on
this controversial issue (Pat's response was controversial in itself,
Bush had no response, and Gore told the story of how he invented Morse code).

I also understand the UN plans to address this issue shortly. There
is talk that UN peacekeepers may be deployed to these newsgroups in an
effort to keep the two sides separated.

> I operate), it provides some protection
> from "Breaker, breaker 19".

As I said in another message, I just can't buy that argument, Jerry. CW testing was dropped in the VHF/UHF bands years ago and there has not been a significant increase in CB-like problems.

And, contrary to common thought, I seriously doubt that dropping the CW testing requirement would bring that many new people into ham radio. I don't support dropping the code requirement for that reason.

Instead, if the CW testing requirement were removed, I think the majority of new HF operators would be the existing VHF/UHF operators who upgrade. In other words, in my opinion the only thing that CW testing does at this point is keep existing VHF/UHF operators out of the HF bands.

And since there is no legitimate reason for keeping those people out of HF, there is no legitimate reason for keeping the CW test requirement.

> You probably say,"make the technical part harder".

No need to change a thing. The existing system works just fine as it is. There are no significant problems in the VHF/UHF bands under the existing system, so there is no real reason to change it.

And, as for the existing problems in the HF bands, obviously CW did not work very well as a "problem filter" there. In reality, enforcement will produce better results than additional arbitrary test requirements.

> Tell you what. We'll give ham radio a
> good Irish wake when you change

> the technology has made the grand
> old hobby obsolete.

I have a more optimistic view of amateur radio. The radio world is changing, and the world of amateur radio is changing. The situation for amateur radio will improve when it catches up with the rest of the world.

And new technologies, like the internet, are not a serious threat to radio. Radio sales are stronger today than five years ago before the internet became popular.

I've heard that Icom will be bringing out their IC-781 with an LCD
(which change reduces the birdies caused by the old CTR arrangement)
but no DSP or any other significant change; it will still have dual
passband tuning, dual watch etc. I don't know the new model number.

It seems a strange move, and especially strange to ignore DSP.

Wasn't the IC-756 meant to be the '781 but with updated technology?

Has anyone heard either the same or something contrary?

Regards,

Alin, Use the initial tuneup settings at low(15 watts drive)power. Tune to peak power. Increase power to 30/35 watts drive and retune to max power. At that point,you are close enough to tune for full output. Nothing secret here,just don't worry about the tubes. If the initial settings are close,you won't exceed anything that is cririical. I've had 4 2100's and NEVER had a tube failure using this tuning method. Best of '99,Leon ke4gg

Greetings W6RCA..

Cecil, can you imagine where America would be if *every* little thing like this resulted in no action because of the possible legal implications? We'd still be in horse and buggy days! Tell me something, why is it that the first thing on the minds of so many Californian's these days is "Sue the Bastards!"? Trust me my friend, the rest of the world doesn't necessarily think like this. Thank God! If I come over at 2 AM to your location and climb your antenna and fall off and break my arm and proceed to sue you aren't you just as liable? Signs, warnings - not a problem - I'll tell the judge I don't read English like so many of the other immigrants coming into California.

Cecil, how many things do you suppose are going on right now around you and me as you read this that you or I probably wouldn't approve of BUT we aren't *aware* of.. Is THAT going to necessarily stop it from being done? Probably not.. And THAT *may* be a good thing as I notice NASA preparing to launch yet another shuttle flight. You remember NASA, the folks that proudly took America to the Moon and back - several times.

Cheers,
Gary

Need to go feed and water my horse so I'll get to work tomorrow as inconspicuously as possible..

I would like to trade for a FT8500 or a FT8100 with tone board
installed if possible. I would also be intrested in a UHF 440 repeater
with duplexer that would be ready to go when I received it.

I have the following to trade with:

3 Maxtrac 800's mobiles B5 (no mics or power wires)
2 STX's one with charger
1 MTX8000 B5 800 mhz portable with charger
1 MT1000 99ch UHF (no charger)
1 GP300 UHF with battery and charger
1 VHF Maxtrac(will take 5 days to get) no mic or power wiring
4 Saber I UHF's 12ch 440-470 split >>no battery or charger<(used
condition) they range from a 6 to a 8 on a 1/10 scale. Some have
antennas, some don't.
1 Johnson VHF's 120w 99ch - with mic and short power wire
several strobe power supplies and strobe heads
plain replacement strobe bulbs
siren and speaker
push button control switch (like in Galls book)

Hey Scott,

I recently went through a similar quandry a while back, except it was the IC-8100 and the TM-V7A. Not being that familiar with the 2800, I can say I'm totally pleased with my V7A. From what I've read, the 2800 is basicly a V7A with color and an NTSC input, but again, I've not had my hands on a 2800 to know it's details. ARRL and CQ-VHF have recent reviewed the 2800, I'd bet you'll find good info there.

I wonder why KW hasen't made the DTMF remote control of the V7A more of an item in their advertising. I love it!

See this site for more info:

Howdy,

You are invited to my non-commercial, sometimes boring, hopefully useful, and always-undergoing-updates website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; Propagation Center including the eAlert service (allows you to sign up an email address to the automated email propagation reports); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Hello all,

HELP!!!

My 830 had a catastrophic failure and the rectifier board caught fire and vaporized part of the board.

My problem: I ordered the service manuals and they will take approx. 10 days to get here.

Is there anyone out there that can scan the schematic for the X43-1370-00 board and email it to me so I can start rebuilding the board? I also have a fax machine here but you have to let me know ahead of time so I can plug it in.

Thanks in advance,

Ron

Hi Cris,

I have solved the "My Dipole Needed Trees" problem for portable operation by turning my Dipole into a inverted-V. You can get mast material for TV antennas in 5 foot sections that can be used to get up 30 feet without too much of a problem. I got a surplus mast kit from Fair Radio that has a 30 foot mast broken down into sections around 3 feet long and goes up very quickly.

For an antenna I use a Dipole cut for 80 meters feed by ladder line into a tuner. It works great from 80 - 10 meters. I can be on the air in about 20 minutes when I have to put up the mast and if there is a handy tree around I can usually do it in about 10 minutes.

Well, that's a little different than turning a piece of public
property into one's private antenna system. It is unbelievable
to me that you see nothing wrong with energizing a publically
owned lamppost with a dangerous level of RF with no warning of
any kind to the unsuspecting public. I would be mucho pi$$ed if
I leaned against a public lamppost and got an RF burn from some
ham too cheap to put up an antenna.

Hi Gang,

Two months ago I purchased an FT-726R from Burgardts in South Dakota. If you didn't know, they go through the rig before they send it out and then add a warranty. I'm purchasing another rig so one has to go. The FT-726 comes with the 2meter, and 430 modules, satellite board, DTMF mic, service manual, operational manual, and the original boxes. The 726 is in excellent shape. No scratches. I just used it in the Sept. VHF contest, and it performed flawlessly. I am asking $680, and we can split shipping. If you have any questions, I can be contacted at kknickelson@mmm.com

Thanks & 73,
Kevin

The 2800 has one drawback that makes it unworthy of consideration. It does not have dual in band receive. No VHF/VHF or UHF/UHF. This is a gross oversite on Icoms part and so far as I am concerned, makes the radio useless. Really sad, because I really fell in love with the looks of this unit. Their IC 2710 does have dual in band rcv and is why I bought it instead. I did not even consider the TM-V7A for 3 reasons. It's an internod sponge and doesn't even work around pagers and strong dispatchers, you can't see the display during the daytime in the car even when the sun isn't very bright and that painfully slow scan rate of 4 channels per second. Even Icom does slow at 8 per sec but I live with it. Yaesu is 26 per sec and is beautiful.

Greetings Cecil..

We're talking about less than 25 watts to the lamp post with feed line losses taken into account. Further, at approx. 25 watts of HF RF you won't get 'burned' leaning against a vertical antenna. I can't begin to tell you all the times I've had an amateur operator friend in the shack while I manually tuned a Butternut HF6V. Any burns - no! And he was putting at least 25 watts into the coax. Keep in mind that many folks out there in the real world don't have the luxury of putting up a monster array or even a vertical depending on their location. They do what Clint Eastwood mentioned in one of his movies - improvise. And this was an *excellent* idea. And I'm sure there are more than a few amateur operators out there right now doing something *very* similar to this. And the passerby probably doesn't know it nor really even cares.

Cheers,
Gary

Even residing in Madisonville, TX your call certainly originated (at one time) in California. So what I've referred to regarding California - you certainly understand. Including that mentality which certainly doesn't correlate with southern hospitality!

Hello,

WB8RCR has recently posted a new version of his program, 'QSL Maker' - check it out at http://hfradio.org/wb8rcr/

This is a Windows 95 program, It will not work under Win 3.1. The program has also been used on Windows 98 and Windows NT Workstation 4.0.

- When you first bring up the program, you are shown a dummy QSL design.

- Simply enter your call and address and you have a useable, if somewhat dull, QSL.

- Your call, name and address are remembered for future launches.

- You can adjust the position, color, and font for all the elements of the card.

- You can use a Windows bitmap as a background for your card.

- Once you have the design you like, you can save it for future use. In fact, you can save any number of designs for special purposes, events, etc.

- There are 2, free-form lines for your QRP-L #, FISTS #, 10-10 #, grid square, awards, etc.

- The info block can be removed for those who would like to write this information on the back.

- Dockable toolbars, put them where you want.

- There is a full-blown installation program, and complete deinstall.

- There is extensive help.

- If you use custom colors, they are remembered across launches.

Again, this is software by WB8RCR. Come check it out.

73!

Source record: 97996
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

The 2800 has one drawback that makes it unworthy of consideration. It does not have dual in band receive. No VHF/VHF or UHF/UHF. This is a gross oversite on Icoms part and so far as I am concerned, makes the radio useless. Really sad, because I really fell in love with the looks of this unit. Their IC 2710 does have dual in band rcv and is why I bought it instead. I did not even consider the TM-V7A for 3 reasons. It's an internod sponge and doesn't even work around pagers and strong dispatchers, you can't see the display during the daytime in the car even when the sun isn't very bright and that painfully slow scan rate of 4 channels per second. Even Icom does slow at 8 per sec but I live with it. Yaesu is 26 per sec and is beautiful.

I beg to differ. 35v RF is enough to get a nasty burn. Try touching
your tongue to it. (Remember "The Christmas Story" where the kid
touches his tongue to a lamp post?) I've still got a scar on my
lip from touching it to my metal microphone while driving a
dipole with only 50w when in high school.

Was that with someone touching the antenna with one hand and ground
with the other? I seriously doubt it.

Cecil, I said "As a young pup..." I was a kid when I did that.

Use your imagination: Substitute "flag pole" or "grounded antenna tower"
for "streetlight pole"; the matching scheme is the same.

Good info on the 2800 and I have to agree with Solmar, no V/V or U/U and the 2800 is out of the race. Bad on you Icom.

However, I do have to take some exception, from an empirical stand point, to his 3 comments about the V7A.

1. "Intermod sponge" - I live less than a block from our city dispatch/communications center and about 6 blocks from the largest paging service center in the county - no intermod probs here. I'm using a stacked pair of 4 ele beams (Arrow 146-4S). Directivity may be helping here, but I'd also expect that when I'm aimed at either of these sources, it'd be a liability as well. That's just not seen here. And no, haven't noticed a lack of sensitivity either.

2. "you can't see the display during the daytime" - I've had no more problem seeing the display on this radio than I have had with any other device with a large, flat plastic cover on it's display. Glare off that flat plastic is MUCH more of a problem than anything with the blue display. I'd have to expect the even bigger piece of flat plastic on the 2800 would be even more of a problem. There are enough options with the contrast, reversal, and dimming of the V7A display it's only the extreme situation that causes 'wash out' on the display. But then I get the same kind of glare and wash out problems with other radios in the mobile stack as well. Not unique to the V7A. (I run a scanner, An HTX-202 {APRS}, and the V7A on a mobile 'mount stack' between the seats of my Ramcharger).

3. "painfully slow scan rate" - Ok, it is slower than my Pro-2026. Using my 'Mark 1 eyeball' and a Casio stop watch, I see my V7A go past 8 memory channels in about 1.8 secs. But I bought the V7A as a transceiver. That's why I bought the Pro-2026 - it is a scanner. The V7A is fast enough to check the 2m/70cm band and find users and repeaters and such. It is after all a personal choice. If you want a mobile FM 2m/70cm xcvr that's also a fast scanner - I'd suggest the FT-8100R, that sucker is fast!

Hello,
I have a good condition (7 out of 10) Drake TR-4 transceiver and
Speaker/
Power supply for sale. Unit includes the following:

Drake TR-4 transceiver
MS4 Speaker
AC3 power supply
Original Manual
Hand mic

This unit covers 80-10 meters, runs SSB, CW, and AM. 125+ watts
output, final
tubes about 70%. Works well. Copper Chassis shows some corrosion, but
unit
was used daily and all the caps, switches, buttons, etc are in good
shape. No noisy
pots. Can demo on the air any time. Price is $199 + shipping.

thanks,
Joe K7JOE

Hi,
I have for sale a Kenwood TS-130SE HF radio for sale. This is an
HF rig, covers 80-10 meters including WARC bands. Has speech processor,
power cord, and Kenwood MC-35 noise cancelling microphone.

Unit is about an 8 out of 10 cosmetically -- original owner lightly
signed his name in the top bezel -- can be covered with a small piece
of tape. Electrically 100+ watts out on all bands. Works great.

Email if interested. hard drive crashed last week, so if anyone
contacted
me last week please try again.
thanks,
Joe K7JOE

6774. FS: ===<Collins>=== 32S-3 Transmitter and 516F-2 PS

Newsgroup: rec.radio.amateur.equipment

Hi Folks,
I have for sale (again) the Collins 32S-3 transmitter and matching
516F-2 station power supply. Flakey guy never sent payment. Then hard
drive crashed and I lost next folks in line -- sorry.

This is extra class gear for class A operators only. As used by his
majesty JY1 and the senator K7UGA. Collins Quality.

32S-3 Transmitter is S/N 11K, winged emblem,
and shows full output on all bands. Cosmetically, front panel is
perfect (no rub marks) and chassis condition is very clean. Cabinet
shows only a few minor surface nicks. Never repainted. Metal trim
ring.
I have tested it on the air and do not note any defects. Comes with
photocopy of manual. http://www.xprt.net/~joentam/binary/32s3.jpg
http://www.xprt.net/~joentam/binary/32s3in.jpg

- And -

516F-2 Station power supply. Also winged. near as I can tell, this one
is
completely factory stock. No speaker mounted inside it. Grill is
original.
Cabinet shows a few surface scuffs only -- nothing ugly or deep into the
metal.
metal trim ring. includes 5R4 and 5U4 rectifier tubes too. Will need
to ship
this in two boxes (cabinet separate from PS) to avoid damage.
http://www.xprt.net/~joentam/binary/516f2.jpg

Price for the pair is $700 + shipping. Next stop is ebay if I get
flakey lids,
kids, or space kadets on this stuff. No tire kickers please. For
those that know....know.

I had several queries for this, thought it was sold, hard drive crashed,
and never received payment. So, it is up for sale again.

thanks,
Joe K7JOE

No but since I have an IC9000 (same CRT) I would like to know if the
LCD will retrofit.

You can't take these newsgroups too seriously, Tim. This is not what Amateur Radio is about, and ham radio is far more civil on the air (so are many of the operators in these newsgroups). In fact, many of the people in these newsgroups might actually become friends if they were to meet each other in the real world.

An antenna would be very useful, major improvement over the "duck." I use a Diamond RH77CA, which is flexible and great performance. It requires a little adapter. Very nice.

Also, a spare battery pack such as the 600mah FNB-49 or there is a 900mah pack.

To purchase try NTX-COM 1-877-689-2666

or AES 1-800-558-0411

Hope it helps.

Is anyone able and willing to send me a copy of the Owner's Manual for
subject 70 cm linear? I will, of course, pay all copy and mailing costs.

Tried six (6) times to get TE to send me a manual - after sending them
$8.00 USD, as requested. Even talked to the President three times.
Always promises, but no delivery.

Pretty poor when a company stiffs someone on the purchase of a Manual.
Good linear, however.

Hi All,
I've just acquired a Kenwood TS820 that does not transmit. What I know is:

- I don't have a service manual
- shows high B+ ok
- receive is ok
- Comp on meter shows tx audio
- No pa current at all.
- It seem that I have signal going into the RF board.
- Rf board has a mixer that drives the 12BY7, signals going into the mixer but

I don't see anything coming out.
- Mixer is a pair of dual gate fets. 9 volts on the source but gates have neg
dc at
all times.

Any help would be greatly appreciated.
Thanks, Glenn

Hi Dave,
I'm amateur since 1980. I've already worked with a classic Hy-Gain 14-AVQ with outstanding results, especially in DXing. This is probably one of the more effective vertical in the market, even its design is just a bit "dated" (1975..?). It handles well the 2KW PEP of my TL922 and its constructions is very robust.
But there are three "secrets" to achieve such outstanding performances:

- ONE: the antenna must be mounted well above the ground (at least 10 meters, mine is 15 meters up), up on the roof or over a long pole.

- TWO: at least one (two is better) wire radial for each band must be provided: the radials must be at least 5 meters above the roof level in order to work with minimum losses. The radial's inclination angle with respect to the antenna axis must be high (greater than 45 degrees): this insures a very low take-off angle.

- THREE: the radials must carefully tuned (i.e. adjusted in length) for a good resonance in the mid-band.

In order to give you an idea of how this antenna works, I've performed some comparison test with a good friend of mine who has a 4-elements quad @ 18 meters over ground: in a real DX envinronment my vertical looses only 1 and 1/2 S-units !!!

If you are active on 20 meters, you can ear me during the week-end on 14.185...

>
>Who has any experience, suggestions, comments between these two, or are
>there other units I should look at?

Hi Scott;

I recently bought the IC2800. I really like it. I've done the mods
to it, and they work as claimed. It has an RCA jack on the side of
the detachable face where you can hook up a video camera. I'm
planning on installing one of those small (2"x2") color cameras on the
back of my van, so I can see how close I am to the car behind me when
I'm parallel parking. Should prove to be handy.

The only down side is that you can't see the display if the sun is
shining on it. But the color display is very nice.

Programming it took some getting used to. It isn't very "user
friendly" like all Yaesu radios are. But I'd still recommend it to
anyone. It has some really nice features that other radios don't
have. I think it has 99 memories per band, and EVERY channel can have
an odd split. It inserts a variable 10 dB pad when you continue to
increase the squelch control beyond where it mutes. This virtually
removes all intermod problems.

6791. ***WANTED: Old SYNTHESIZERS & MIDI Gear***

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-20 00:00:00 UTC
From: rolandman1@aol.com
Message-ID: <7s5bi4$dm5$1@nnrp1.deja.com>
Source record: 98080
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.swap,alt.music-lover.audiophile.hardware

Hi there, I'm looking for old electronic music-making equipment from
1950s-1990, in any condition, working or not working. Parts too:

SYNTHESIZERS & KEYBOARDS (Moog, ARP, Roland, Korg, Sequential Circuits,
Oberheim, EML, EMS, Buchla, Serge, PPG,
Digisound, Ionic, Yamaha, etc)

DRUM MACHINES (Roland TR-909, TR-808, TB-303 Bassline, Simmons, etc)

EFFECTS PROCESSORS (tape delays, flangers, phasers, frequency shifters)

VOCODER (robotic voice effect)

SEQUENCERS (anything with knobs or sliders)

MIDI TONE GENERATORS

ANY OLD MODULAR/PATCHABLE/ANALOG SYNTH (ARP 2600, MS20, Big Moog, etc)

The older and more unusual, the better. In general, I prefer things with
lots of knobs or dials but will consider anything, especially the unique.

To get a better idea, please go
to:http://members.aol.com/rolandman1/index2.html

Please email me privately at rolandman1@aol.com if you have anythingI could
be interested in or if you know someone who might. Be sure to include price
and condition. Thanks for your time, sorry if this message annoys anyone.

Roland Jupiter 8
Voyetra Eight polyphonic synthesizer module
Oscar with or without MIDI
PPG Wave 2.3
Yamaha TG77 Tone Generator
Casio VZ-10m Professional Digital Synthesizer

You should have a small amount of PA plate current even if there is no
drive. (small, but easily visible on the meter) If you don't, I would
think you have a DC problem of some kind in the PA. (or the heaters are
burned out - normally I would assume you've already checked that but
with some of these radios, it's awfully hard to *see* the heaters!)

6796. Re: FT-1000D vs FT-1000MP

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-20 00:00:00 UTC
From: Bill <jobes@bellatlantic.net>
Message-ID: <37E5ADA0.81FB21B2@bellatlantic.net>
Source record: 98085

They are so different, it's as if they were made by separate companies.
I literally spent an entire day at a dealer going back and forth
operating the 1000D and the 1000MP.
I chose the 1000MP strictly because I wanted to experience the new
technology. It has not let me down in that respect. It's a complicated,
yet easy-to-operate rig.
The 1000D was clearly the superior radio, though. It just felt more like
a rig in the price class. It is solid and steady as a rock. It has a lot
of class.
I added nearly all the optional filters and mods to the MP, and the
price is very close to the 1000D.
The MP is a great and exciting rig, but I'm not sure after six months if
I'll keep it.
The 1000D and the Kenwood 950 still interest me a lot.

6799. Heath SB-610 diagram/voltages?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-20 00:00:00 UTC
From: Doug Smith <w9wi@bellsouth.net>
Message-ID: <37E5FE4F.CECCA39A@bellsouth.net>
Source record: 98088

Anyone willing to provide a copy of the diagram for a SB-610 "station monitor"? Or at least some DC voltage readings on a properly-operating unit?

I have one that works, kinda.. it won't quite focus, the maximum deflection amplitudes (especially vertical) seem low. I have a gut feeling something is messed up in the power supply. But I don't have a manual, so I don't know what it's *supposed* to read..

I'm willing to cover duplication and postage expenses. Thanks!

Source record: 98089

Well, one thing that was important to me, but may not be to you is that when using tone decode in a memory position, there is no way turn it off. Enabling/disabling cross-band repeat is very easy in the 610, but more involved on the 605. The 610 has 3 power settings, the 605 only 2. The 610 has a cooling fan, the 605 just has a large heat sink.
Again, the 605 performs well RF-wise, its just that the functions are confusing and difficult to remember.

Ah that great Icom radio! I still regret selling it a few years back. Unfortunately, I believe you are stuck with the single tone setting, I didn't have a manual for mine, but never found out how to do what you ask. The other downfall was if you use an odd offset, you were only allowed on of those as well.

On the plus size, I have never found another radio that has the intermod rejection capability the 28H did.

Cheers!
Jeff VE3JTR

Not exactly...

>Any way to program specific tones for each of the 21 memory channels
>in this unit?

While in the SET Mode, which can be accessed while in the Memory Mode
or the VFO Mode, you can select three different tones, and then
program any one of those three into any of the 21 channels, but no more
than three at a time.

Don't believe it's do-able with a 'stock' PCS-3000. I have (a now busted) PCS-4000 and it did not have built-in PL.
It had a piece of real estate on the board where you could install a small tone board -- but, even at that, it was set up for one tone freq. There was no front panel or mic control of the tone freq -- just an ON/OFF control.

I did do a pretty slick install of a Comm Specialists PL board and a miniature thumbwheel switch to have 10 (common) tones available.

6804. FT: VHF Hi Band HT's for 2 meter HT

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-21 00:00:00 UTC
From: W8EMS@webtv.net
Message-ID: <26048-37E7AB24-30@newsd-123.bryant.webtv.net>
Source record: 97893

I have two, 2 channel VHF Ht's. These are Radio Shack believed to be made by Maxon. Crystaled for 154.600 with the second channel blank. I think the output is 2 watts. Both radios are in good condition. I have one charger, but a second would be available at R/S. (70 ma @ 12 v)

I also have one R/S VHF Hi-band programmable HT, also on 154.600 / 154.570. This radio is new but the receive auido is garbled at times.

I would like to trade these for a 2 Meter HT. Will trade both crystal radios on a Radio Shack 2 meter HT or all three for a better model.

Please reply by e-mail. I don't check the group every day.

I inherited a Kantronics KPC 3 from my father in law, and I cant find anything that goes with it.

I need to get
1. Copy of a manual and instructions
2. I need to know where to get the software for it
3. What type of AC adapter goes on this unit
4. How to wire up the cabling to a PC
Any and all help would be greatly appreciated
Thanks

HI Steve

You might want to check Radio Shack., they have some coaxial capacitors but
they do not call them that. They have Store numbers : 270-051, 270-030 270-055
272-1085
I got those from page 267 of their 1999 catalog..

6808. Help: DX-398

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-21 00:00:00 UTC
From: luecknik@world-net.net
Message-ID: <37e7cee7.19126226@news.world-net.net>
Source record: 97897

Has anyone had the case apart on their DX-398?. Mine works fine,
except the whip antenna is noisy. Static when moved.
It had this problem when I bought it, and I thought it would be a
simple fix.
I have taken the 5 screws out of the back, but it seems to be stuck
together with something else.
The plastic is very soft, and I don't want to mar the surface by
prying. What am I missing in the disassembely procedure? Anyone?
Thanks. James W5LWU

6809. FS: Icom 756 Transceiver

Newsgroup: rec.radio.amateur.equipment

I have a Icom 756 transceiver in like new condition for sale. Unit comes complete with original box, manual, schematic, and other paperwork. Has always been used inside ham shack, and kept covered when not in use. Was used as backup transceiver. Has the Icom MARS/CAP mod professinally installed and documented. This is a outstanding receiver offering a bult-in tuner, DSP, Auto-notch, and graphic display. Unit works and looks like new. $1475, and I will pay UPS shipping and insurance to anywhere in the US mainland.

Additional Specs from website: The ICOM IC-756 is an all mode HF and 6m transceiver. It has a 4.9" blue LCD and dot matrix display, and features selectable AGC, microprocessor controlled automatic antenna tuner which also covers 6m, built-in Digital Signal Processing, built-in CW memory keyer with auto-count and repeat functions, CW reverse, dual watch (monitors two frequencies in the same band simultaneously), 100 memory channels, microphone compressor, RF attenuator (four step), RIT/XIT, spectrum scope with selectable passband width offers a graphical display of activity up and down the band, SWR meter, transmit tone equalizer, triple band stacking registers, twin passband tuning, VOX, 100% duty cycle (HF & 6m), and much more!

Thank you!

Hello,
I have been selling on Ebay and the prices on some things just cost to much to sell there, So I have another auction site I have moved some of my stuff to, Its called Up State Auctions and there new and trying to get started. I have spoke to the owner several time and he is a nice guy to deal with. I am looking for a place to do some swap, sell, dealing and trading other than ebay. If you get the opportunity stop by at the link I have place below and have a look at my stuff and look around, and list some of your stuff... I do have a bunch of new radio's and accessories I am selling at well below retail value. I am not a dealer I do this for a hobby, for the last 30 years..I will also place a link to me on ebay and you can check my feed back rating..I am letting the items listed on ebay run out and them my realist a few..
Thanks for your time.
Alan.

6813. Help With CCTV Camera?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-21 00:00:00 UTC
From: DavidC <b4e@earthlink.net>
Message-ID: <7s8h30$4cl$1@holly.prod.itd.earthlink.net>
Source record: 97902
Cross-posted to: alt.ham-radio.atv,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I have a Panasonic CCD CCTV camera model WV-BL202.
The Panasonic label says Output Video 1Vp-p 75 ohms.

It has a Cosmicar Television Lens 16mm 1:1.4 with F-stops
16, 11, 8, 5.6, 4, 2.8, 2 and 1.4.

It runs on 12vdc, has a BNC connector for "Gen Lock", a
switch to turn AGC on and off, and another that has "Auto Iris"
above it and DC Video" below (though curiously this switch moves
left to right so it is unclear what it is selecting).

There is a second BNC for "Video", and a ALC control on one
side and a square four pin connector on the other (unlabeled).
On top is a 1 1/2" x 1/4" metal strip held in place by a screw.
There is a label next to it reading "OFF ON G/L 75 Ohms".

So, what do I have, please? Sounds like a monochrome
camera with a very wide angle lens. But after that what do I
need to know about using this for ATV, SSTV or as an Internet
cam camera on the tower or as a security monitoring camera?
What sort of interface would be required, etc?

Thanks for information, or referrals to a source of information.

73, DavidC K1YP

Have the following Teletype Corporation original technical manuals
available for some lucky soul:

1. Bulletin 309B (Volume 1) which covers installation,
disassembly and reassembly, lubrication, and principles of operation
of the component units of the Teletypewriter Sets designated:
32 Teletypewriter Sets
Receive Only (RO)
Keyboard Send-Receive (KSR)
Automatic Send-Receive (ASR)

2. Bulletin 1210B which is the parts breakdown and exploded
diagrams for the Teletype Corporation 32 Page Printer Set (ASR, KSR
and RO).

They are yours including Priority Mailing for only $12.00 total.
I'd rather see them put to use than trashed.

He's probably right - you need to press and hold the centre button of
the 5 way switch until the menus come up, then press up/down until the
offset appears. You may need to change the step back to 5khz to put it
back to 600.

6829. Motorola Radius PS10 recieve/transmit problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-21 00:00:00 UTC
From: jmt@rfci.net
Message-ID: <37e7fde2.37280680@news.blueridge.net>
Source record: 97918

I have a Motorola Radius PS10. This radio was working fine, and hasn't been dropped. It started making a loud whining noise and doesn't seem to transmit either... It really starts whinning when you transmit on another HT... but it doesn't pick up one hint of what anyone is saying, etc... just the duck from hell sound... I have seen another radio do this, but I can't remember what was wrong with it.

Thanks to anyone that can help,

J.T.

Unworthy is rather harsh -- actually U/U V/V is nice to
have but in my case it was a "Don't care".

But -- comparing the 2800H and the TM-V7A:

The TM-V7A is notorious for its poor readability
in strong light. I have seen this in person -- the poor
guy had the head mounted on a dual swivle mount (like a
cars interior mirror) and was constantly adjusting it when
he wanted to read it. My 2800H is perfectly visible in
bright sunlight and has adjustable brightness for darker
periods.

I have heard the V7A was intermod prone. I haven't
experienced that. I haven't had a problem with the 2800H, but
then I avoid big cities -- my country upbringing in place.

The IC-2710, FT-8100, and the Alinco 610 model have the U/U V/V
feature if you are looking for that, specifically.

I was "Gee-Whizzed" by the display, but you will pay an extra
$100 for it. I got mine from HRO at the Dayton show special
price or I probably would have bought one of the others. The 2800H
was Icom's first step in their Thin Film Transistor (TFT) color
display project. If you look at their web page,
http://www.icomamerica.com, you'll see their next step, the IC-756PRO.

When the vehical is running the radio wont transmit, then the vehical is off it transmits fine. I haven't seen anything like this before. The radio is wired directly to the battery, and the radio will work in other vehicals. Could it possibly be the regulator gone bad on the vehical? I haven't tested voltages yet.

Thanks,
J.T.

Press Page and hold while turning the unit on, and place in an open space
for several hours. Now that the end of week thing is over(9/20/99) the unit
should reload it's satelite memory and be ok. If not, the internal battery
could be dead. If that's the case, a trip to Kansas is required!
Good luck, Paul (see http//www.garmin.com)

I would like to trade for a FT8500 or FT8100 with tone board
installed if possible or a UHF 440 repeater with duplexer
that would be ready to go when I received it. I have the following to
trade with:

3 Maxtrac 800's mobiles B5 (no mics or power wires)

2 STX's one with charger

1 MTX8000 B5 800 mhz portable with charger

1 MT1000 99ch UHF (no charger)

1 GP300 UHF with battery and charger

1 VHF Maxtrac(will take 5 days to get) no mic or power wiring

4 Saber I UHF's 12ch 440-470 split >>no battery or charger<(used
condition) they range from a 6 to a 8 on a 1/10 scale. Some have
antennas, some don't.

1 Johnson VHF's 120w 99ch - with mic and short power wire

several strobe power supplies and strobe heads

plain replacement strobe bulbs

siren and speaker

push button control switch (like in Galls book)

I have an s41T, and I'd say yes, but it depends on
the application. The battery consumption is very
low, scanning is nice, easy to program, etc. Only
300mw w/o an external antenna means pretty much
line of site to the repeater, though. If you're
in an area where that works, or if you can
crossband repeat from a mobile, then it's great.

biggest drawback is that you can't attach an
external antenna or amplifier.

They're selling new at HRO for $88.00.
The DJ411 is pretty good for UHF,since the non-removable ant. is a 1/4wave on
that band--the DJS11's ant. is more of a compromise,on 2M,and
less of a performer through nearby 2M repeaters.

Source record: 98016

>Is the IC-701 a suitable rig for a novice operator, or are there some
>better choices in the same price category?

The IC-701 is a great starter radio--dual VFOs,and built in CW-Narrow filter.
Only problem is that the radio is 15-20 yrs old,and ICOM no longer supplies
parts.This applies to other radios of this vintage,as well. On the plus
side,the 701 is 100% Solid State,and is capable of 100+watts out.
I bought one to use on the Novice 40M/80M CW band,and also for 10M--works
great.
Expect to pay $250-$350 w/matching power supply.

I am going to agree with Tate here, my V7A is a year old now, and I have found it to be an extremely versatile radio. The remote control feature was neat but awkward to use until I bought my D7A, which has the HT half of the remote control features. Now I find the remote control is effortless and quite useful. The display problems can be solved with experimenting with the contrast and brightness options. There are four Programmable Memories to store the display settings in, I use all four and choose each one depending on the time of day.

Hope this has helped!

Hi!

I don't have a T81A, but I have found that most new radios on the market can change the default offset somewhere in the menu. Your radio, being 5K off of the default, suggests that you may have been in the menu and swung by the default and accidentally upped the value by 5. Check your manual and you probably will find the default offset selection.

>- - and can you imagine the yelp when Pluto stops to relieve
>himself.

Reminds me of an Air Force Tech Sargeant I used to know at Patrick AFB. He had been stationed at Elmendorf AFB (Alaska) in the mid 1950s and was operating a BC-610 (500 Watts AM?) loading a homebrew verticle antenna with a large open base coil. He was operating in the Winter and, one morning his kids came running in crying.

He went outside to find his neighbor's DEAD (frozen stiff) Alaskan Husky and a rather small patch of "Yellow Snow) next to the base of his verticle antenna!

He always swore that the story was true although I suspect it was a Ham "Urban Legend" from the frozen North!!

It always brought a round of laughter at the AF MARS shack!!

I have received a reply with a pointer to KB9JJA's website. This has answered my questions, and the problem (an open 3.3M resistor in the high-voltage divider string) has been located. Now all I have to do is find a resistor to replace it with<g>. Thanks!

Hi

I've just acquired a Sommerkamp TS-800DX CB.
At least I assume it was originally a CB as it covers the EU channels on FM.
It also works on receive on the 10m band. 28 to 29megs on AM, and 29 to
29.7megs on FM.
Has anybody got any information on this radio, instruction book, diagrams,
mod info? I'm certain this set is capable of loads more than its letting on,
and might be a very handy little mobile for 10m FM.

cheers
Jack
Please send direct to

you have a problem if it works that way. You probably should send it back to kenwood. I have 1 and I turn it on and it comes right on. If yours takes a while you should send it somewhere to get fixed because something is wrong. Check your power supply though and make sure it isn't the radio. Your power supply might be takin a while to come up to power fully. Any questions you can email me at racerjm3@aol.com or n1umjjohn@juno.com

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?Viewitem&item=164841474

6870. FS Kenwood TS-450SAT $675. U.S.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-21 00:00:00 UTC
From: Michel Morin <morinm@csdgs.qc.ca>
Message-ID: <NHKF3.3769$j6.48638@carnaval.risq.qc.ca>
Source record: 98034

It is the model which replaced the TS-440 in Kenwood's line and added some goodies.Here is a summary:

Covers all the hf bands including WARC in transmit.
General coverage receive from 30 khz to 40 mhz.
Double conversion receiver with IF's at 8.83 mhz and 455 khz.
Can hold 3 filters, 1 SSB + 1 CW in the first IF, 1 CW in the 2nd IF.
Filters are selectable on front panel with lighted indicators.
Has RIT and XIT, 2 noise blankers, IF shift, notch filter, squelch.
Has 2 VFO's so it can operate split even using 2 bands.

Has 100 memories and lots of scanning options including speed.
Double frequency display, when operating split or using RIT or XIT.
Has AIP to reduce interference.

Modes are SSB, CW, AM, FSK amd FM.
100 watts out all modes except AM which is 25 watts.

Antenna tuner which covers all the bands and works very well.
Keypad for entering frequency directly.
Menu system with 42 functions.

Can be programmed with a computer with an available interface.
Has fine tuning at 1 hz and display shows to 10 hz.
Has fast tuning at 1 mhz, can be changed in the menu.

Can control a linear with a back panel jack.
Has indicators in the display for every function.
Of course, it has a fully adjustable VOX , power and CAR controls.
Semi or full break in in CW. RTTY terminal on back panel.

As you can see, this radio is very complete and it never had the problem that all 440 have, meaning the display problem. The serial number is in the 50 millions which makes it a late unit. It has a 1.8khz narrow SSB filter installed in the 8.83 mhz IF section which leaves place for 2 CW filters.

Included is a Midland desk microphone, power cable and the 2 instruction manuals. The second one is the EXTERNAL CONTROL manual for controlling the radio by computer. I hope this answers most of your questions. Inquiries by email please.

I got a sm-220 station moniter scope and found out I can't really use it with a ts-440. I can only watch my transmit with that radio. It is set up for a 940 currently and that type of radio. It is in grate condition I tried it at a friend's and it works grate. I wnat to trade it for a ts-520 or 820 or something like that 1 of those older radios with the tube finals. I will also sell it for $250 + shipping. if we work out a trade I will pay the shipping for the radio and you pay for the scope the scope will ba a lot cheaper I think. If you can help email direct to racerjm3@aol.com

6879. FT-50 Help Needed!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-22 00:00:00 UTC
From: Ken Chafin <kf6mfvnospam@arrl.net>
Message-ID: <37E95B26.F235F1CA@arrl.net>
Source record: 97793

I was downloading a new radio data file into my wife's FT-50 and when I pressed the OK button, the radio displayed "CERR" and went into European mode. Now it only transmits between 144-146 and 430-440. I have reset the CPU and tried to download different RDFs into it but it won't go out of European mode. Yaesu was no help at all. Does anyone have an idea about getting it back into USA mode? Any help would be appreciated. E-mail me at KF6MFV@arrl.net.

Thanks,

Ken

They are really nice to use if you can find one that doesn't have PLL problems. Icom used cheap plastic trimmer capacitors in the PLL/VCO circuits instead of better ceramic ones. I guess it was to keep cost down. However, when they age, the values change and problems start happening..... Mark W4UDX

Body handling: HTML body converted to readable text

DSI model 5600A Frequency Counter (50Hz-500MHz)

Bench-top style, includes adjustable handle/stand.

It is used, and was removed from a michigan
school a few years back and sold in an auction to
generate funds for better equipment.

It had room inside for an optional rechargable battery option.

It has a connector and will run on 12VDC.

Many selecting, gating, and precision functions.

Dual BNC jack input.

Tested the counter with three ham radios, and tested good
on 14.320MHz, 146.0MHz, and 440.0MHz.

Have original box, copy of manual, and foam encasing.

See http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=168478654
for details

>

Could be... more likely a bad battery and/or a bad alternator putting too
much alternator whine on your 12 lead. Also, possibly a bad 12V DC connection
or a bad ground connection.

Ed

I recently bought an Atlas DD6-C digital dial for my Atlas 210X.
My rig has the 5520KHz IF and I can't get the digital dial to read
correctly.

Another version of the Atlas 210 has an IF of 5645KHz.
The digital dial is off by 125KHz on the 80/40 mtr band but is off by
differing amounts on the upper bands. There's an internal jumper in
the dial which, if opened, only made the error different.

The docs I have state that a TTL PROM data driver is used to
set the IF offset and other parameters. Could I solve the
problem with a different PROM? Any available (obviously not from Atlas
Radio)??

Am I overlooking some other jumper or other possibility?

73,
Doug/WA1TUT

6908. Which Speaker Mic for the Yaesu FT-50RD

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-22 00:00:00 UTC
From: Bill <k9kz@indy.net>

Source record: 97852
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

I recently picked up an FT-50RD. Have any of you had success with using a speaker mic? I've read that the Yaesu speaker/mics sound awful. Any help appreciated !!!

6910. FT-100 lot of problems found

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-22 00:00:00 UTC
From: Mark Jensen <Hamreview@vip.cybercity.dk>
Message-ID: <AX1G3.298$QP1.5973@news020.image.dk>
Source record: 97854

Had a FT100 since april and had only problems with it (returned it to the dealer in august) - now I have bought a 706 MKIIG instead. This is a great radio though the DSP isn'tas good as in the FT100.

Within the first month the following appeared on my FT100:

For a start the 1750 HZ Burst Tone was more like 1900 Hz or so. The problemwas newer solved in the 4 months I had it.

The sensivitity was bad on 6 M/2 M and 70 CM.

Sometimes the PWR went to 0 - turning the FT100 aff/on again made the pwr return.

Sometimes the audio disappeared.

Sometimes the S-meter would only show 1 or 2 bars even on a local repeater.

After 3 months my dealer replaced it because he hadnt heard anything fra Yaesu regarding fixes of the problems.

The new Ft100 went dead after 1 hour of operation. The radio had only been used as a "base"-station in my shack with seperat antennas for HF/6 M/ VHF/UHF with almost perfect SWR.

So I decided to get my mony back and buy the 706MKIIG. When it comes to reliability and durability this is a much better radio. It also seems more robust in its construction. On top of that it has a lot of nice-to-have features that isnt on the FT100 - at least for me.

The FT100 might be a *better* radio but in my opinion first when (or if ever) the MKII is on the street. And with the service and time-to-market that Yaesu is showing, that might take several yrs.

Until then my advice is that if you dont HAVE to have the latest new tech and if U cant see through all the problems with a new 1300 $ radio (that is supposed to just work), use ur mony on the 706MKIIG. If U look at the specs compared to the FT100 it isnt such a bad choice at all.

And if you want to know how *good* the FT100 is - dont read The List - _nowbody_ who own a FT100 would say anything bad abt it unless they have gotten rid of it again! Thats how people react on critics.

In design Yaesu will still be on the top but when it comes to everything else these days are long gone.

I know that some of U will say that *oh, mine has been doing great for 5 trips to XXX and no problems found at all* and thats how it is: some FT100 are actually working and some are not. The *not* are simply just too many

for a radio like that, especially with a manufacture like Yaesu that has really downsized their care for customers.

6911. AEA items FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-22 00:00:00 UTC
From: Ken Simpson <W8EK@fdt.net>
Message-ID: <YY2G3.3408$Wj.177742@monger.newsread.com>
Source record: 97855

I have a variety of items that are made by, or for,
various AEA TNCs, etc. for sale:

5 pin plug - This is the plug that plugs in to the
back of a PK-232, and has a cable that goes to the
mic connector of the radio. Use this to make your
own cable. $1 each or 3 for $2.

PK-232 cable. This is the cable that comes with the
PK-232, and goes to the radio. It has the 5 pin plug
on one end, and nothing on the other end. $ 10

MFJ-5086X. Made by MFJ for use with the PK-232.
This cable has the 5 pin plug that goes in the back of the
PK-232, and goes to an 8 pin mic jack that fits most
Kenwood and Alinco radios. It also has a cable that
goes to the speaker jack. This one is new. List is
$25, but this one is only $15.

AEA wall power supply. 12 V DC at 1 amp for
use with the PK-232. This one is a real AEA, not 3rd party.
Lists for $25, but this one is only $15.

AEA PK-88 TNC with mailbox. Looks just like new.
Includes manual and cables. $ 70

Here are a couple of oldies:
AEA MBA text. This is a plug in cartridge that gives
RTTY capabilities, plus some other digital things to
either a VIC 20 or a Commodore 64. New with manual.
I have 2 for the VIC 20 and one for the C-64.
Make an offer on these.

Prices do not include shipping from Florida.

Thanks.
73,

Ken, W8EK

I'm wondering why an old 736 with the 50 mHz module is worth more than a new, Guaranteed FT-847? The 736 runs less power, has no HF or any of the other gadgets. Is it the receiver or what?

>bought something else??--Thanks for any and all comments. Stan KC2ADC

Stan,
I've had mine about 3 months and is well pleased with it. Prior to mounting it in the car I operated it in the shack to get used to it. One thing I did notice, if you transmit for any length of time, the unit gets very warm. Almost borderline hot. The manual warns you about this, so be sure there is sufficient ventilation around it. The scan rate is somewhat slow. I have only about 6 frequencies programmed and this is no problem for me. If you're going to load up the memories it maybe undesirable for you.

>burns - no! And he was putting at least 25 watts into the coax.

Depends on where you are grabbing the antenna.

A gamma match can have much more than the feedline voltage on it,
because it has reactance and resistance. The VAR power is always
higher than the applied power, sometimes by a large amount.

I wouldn't worry much about grabbing a 1/4 wl tall or shorter series
fed vertical at the bottom or near the bottom with 25 watts, but you
can ask for problems if the gamma section just beyond the capacitor(s)
is exposed to people.

IMO, using when using public property for an antenna I'd be SURE
absolutley nothing could go wrong...and then still think twice about
it.

If it's your pole on your property, that's another story.

>HELP, PLEASE!

The computer interface cable for the FT-50 is *not* simply a cable.
It's actually a level translator circuit as well - the components
are hidden inside the DE-9 connector that plugs into the PC.

There are circuit diagrams on the Web that describe how to build
your own cable, including the level-translating function. I've seen
them, but didn't keep a pointer to them. However, I imagine that a
half hour spent with a web search engine would find one for you.

Thanks, gentlemen. Your probably right. I'm still learning my way around
this little radio. I went back to the default settings and all now seems to
be well.
Neil, AB4YK.

Cross-posted to: alt.ham-radio.atv,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

> So, what do I have, please?

We'll take it one at a time:

> I have a Panasonic CCD CCTV camera model WV-BL202.
> The Panasonic label says Output Video 1Vp-p 75 ohms.

The video that floats around in TV stations is one volt peak to peak. What that means with a white video screen, the points to the bottom of sync to the top of the white video is one volt. 75 ohms is the Z of the video line. Just like CATV is 50 ohms.

> It has a Cosmicar Television Lens 16mm 1:1.4 with F-stops
> 16, 11, 8, 5.6, 4, 2.8, 2 and 1.4.

The F-Stops are simply a way to either close or open the iris according to ambient lighning on the subject you are shooting.

> It runs on 12vdc, has a BNC connector for "Gen Lock", a
> switch to turn AGC on and off, and another that has "Auto Iris"
> above it and DC Video" below (though curiously this switch moves
> left to right so it is unclear what it is selecting).

Gen Lock is something you don't need to worry about. That is how you lock different video sources together as in a TV studio. You will want the AGC and auto iris on. DC video is clamping. It keeps the DC level of the output video at a constant level. That is something you don't have to worry about either.

> There is a second BNC for "Video", and a ALC control on one
> side and a square four pin connector on the other (unlabeled).
> On top is a 1 1/2" x 1/4" metal strip held in place by a screw.
> There is a label next to it reading "OFF ON G/L 75 Ohms".

Video is the output of the camera. I'm assuming the ALC is a pot. I wouldn't worry about it either. The spuare pin connector sounds like an S-Video output, but since the camera is monochrome I don't see where it would use it. The label is referring to the switches on the side below it I'm assuming.

Sounds like you have a good camera for remote use. I have a similer camera that I am thinking about placing in my Jeep facing forward and feeding to an ATV transmitter. I have to get the transmitter, first.

Hope this information has helped.

Scott

I have used the MFJ 1278, the Kantronics KAM Plus and the AEA PK-232. In my
experience I found the KAM to be the best at copying CW, Pactor, Rtty.
The Pk-232 comes standard with a 200 Hz shift which is designed for HF packet
as opposed to the 170 hz shift used om Pactor and RTTY. It will work but it
is not the optimum setting. The KAM does have multiple selectable shifts.

One last note the KAM plus or KAM 98 is the smallest one of these units, if
size is any
concern.

Good luck Dave Struebel WB2FTX - Running HF NTS Winlink- Amtor,
PActor,Clover.

I've got to quit reading news groups at work when people qup like
this. Everyone looked over to see what I was giggeling at. :)
>
>I am able to receive the neighbor's baby monitor on 49 but the baby
>doesn't QSL.
>
Furthermore, I'd be tempted to transmit and see if the other end
would QSL when you suddenly came over the baby monitor.

Anyway, I would like to do some 6 eventually too - I have an all-mode
2M now - and have been looking at Ten-Tec's transverter. If any one
has any experience with this, I'd love to hear about it. My 2M rig is
a Yaesu FT 290R MK II. I'd like to hear from anyone who has put a
transverter on one of these radio's too.

Is there any activity on 6M AM? I would think that most (all?) long
distance activity would be CW or SSB. I've seen a number of old 6M AM
units for sale cheep, but have stayed away because I assume (always
dangerous) that there is no AM activity.

Message-ID: <37E96055.CFACBF17@netlabs.net>
Source record: 97888

Hi All,

After a successful 2 meter J-Pole Project I decided to build a 440
J-Pole and
having problems with the feed point. I am using the same technique which

i used for 2 meter but no success. when i start moving the feed point
from bottom to top SWR meter showing that my output power is changing. I

know this can happen because of the impedance change on the feed point.
I do not have lots of test equipment to find the feed point.
After unsuccessful 440 J-Pole try I try to build another design 440-450
Omnidirectional Antenna (73 Amateur Radio Today November 1994 page 22)
same problem.
Any sugessions ?

Thanks in advance

Levent

Source record: 97746

Hi,
This is a RCA 74B ribbon mic. It is in very nice condition and has good output. It comes with a med. size desk stand. The mic.has a couple of scratches at the bottom edge, but they could be buffed out. No dents, rips or rust. Overall a very nice useable and collectable mic. I will include a XLR connector as it does not have a connector now. $400 shipped in the 48. Thanks, Gary

From: artky1k@northlandlink.com
Message-ID: <37ea6f66.25275911@news.tds.net>
Source record: 97749

Hi Everyone,

I need a source for a TRF receiver chip.

The numbers are ZN414, ZN416 or MK484. These are 3 terminal chips
that run on 1.8 volts @ low current and are usable from 30 khz through
1.8 Mhz.

I have no other information.

If anyone knows of a source for these chips or an equiv type, I'd
appreciate knowing too.

email response preferred-

Thanks,

Art

Message-ID: <19990923162208.24009.00001593@ng-fa1.aol.com>
Source record: 97751

I need some information from all you VX5 owners.
I just recieved a new VX5 and I noticed while recieving a 2 meter signal on NFM
with maximum modulation the audio scratches when the volumn is over 50%
The audio distorts badly and is very annoying.
On WFM and AM there is no problem even with full volume
I called YAESU but they kept referring to the howling problem but I tried to
explain to them that this is different.
Is this a normal condition for this radio because of the small speaker ?
If you are a VX5 owner please let me know either way.
Thankyou & 73

SURE, not a problem. Download Goran Vlaski's FT50 programmer from the web. It will software mod your radio for U.S., European, Free Band or whatever you like. I have put my FT50 into (and out of) various modes with no problems. DO read the instructions carefully!

Sorry I do not have the web address. Do a search on Yaesu and look for his last name on virtualave in the URL.

LOL

Message-ID: <37EABC39.82524F97@erols.com>
Source record: 97760

I just recently got my first license (Tech), and found myself asking the same question. My answer was to purchase an ICOM IC-706 MKII. While this radio is a bit more that the $500 mentioned in your posting, there are plenty of capabilities to grow into, as you upgrade your license class. So far, I have really enjoyed the 706 MKII, and I'm looking forward to using more of the capabilities (i.e. - the HF bands), when I upgrade my license.

I'm not trying to push the ICOM brand name; rather, I'm suggesting an "all purpose" HF/VHF transceiver. There are several of these on the market (e.g. - ICOM, Yaesu, Alinco), and used equipment is also an option for a smaller budget.

>3. You need a 12v, 300-500 ma power supply.

The manual says the KPC-3 runs on 6 to 25 volts at less than 40 ma;
if you turn off some of the LED's, it'll run on a 9-volt battery
at about 15 ma!

House and Radio Station For Sale

If you saw this add before and thought that the price was too high well now the house and radio station costs much less. The new price is only $80,000.

Think about this for a minute. You could own your own radio station. You can promote new bands, play music or talk about news. An automated computer controller comes with the station. The computer does everything so it is easy to run 24 hours a day 7 days a week with little work.

The house is nice too. It has a large living room. The picture window gives a panoramic view that is breath taking. There are many outdoor activities close by. It's 20 miles from a vary popular state park. Not far from town.

Leon,

I've got another question for you. I have had an FL2000B for about a year now, and when I put new 572B (Svetlana) tubes in it I did the bias mod and then checked out the input SWR on each band. I found that even with the older Cetron tubes, there was a significant amount of reflected power going back to my FTDX-560 exiciter. Strangely enough, this mismatch also persisted with the amp in the "Standby" mode. Have you ever evaluated the rig -> amp match in your situation? Being a tube rig with a standard PI output configuration, the 560 can be loaded up in to the amp without too much trouble, but it still is a concern to me. I've tried using the recommended procedure for tuning the input tank slugs, but they seem to have little effect on the SWR. I should mention that during these tests, I am running into a good dummy load with a known 1.05/1 SWR.

Thoughts?

I wouldn't get either... I have the V7A, and intend to
replace it as soon as I get the money. The main reason
is the display. What good is the radio if you have to
stare at the display just to read its information, this
is very UNSAFE while driving down the road. Other than
that I like the radio, but for most mobile applications
its not worth it. And If I'm not mistaken, the ICOM will
not do V/V and U/U, it only does V/U which SUCKS!

Get a Yaesu FT-8100.... Thats what I'm getting..

I'm gonna put my V7A in the house since it doesn't have
a UHF radio, and put the Yeasu in the truck.

What are your requirements?

Will you be using your HT in noisy environments? In the car? In places where privacy is a concern - and you should be thinking of an earpiece/microphone combination?

I regularly use the Yaesu MH-34 mid-size speaker-mike. I tend to shy away from anything smaller. The sound quality is fine.

For noisy environemnts, Premiere offers several options: throat mikes, surveillance earpieces, and headset boom mikes. All are available for the FT-50, and all work great.

The "best" - in my dealings - would be a store with not reasonable
prices but also excellent customer service.

And, in your case, you also need a legitimate Icom dealer.

Ham Radio Outlet fits your needs. They are online at:

Answering my own inquiry...

For the record, I got a same-day response to e-mail direct to Larsen. They suggested that the glass on the scar was probably a bit thinner than their standard design. Their suggestion was to offset the inside and outside mounts a little. That should raise the resonant frequency on VHF. They admitted that having the resonant frequency on UHF be too high in the band was a unique problem that they hadn't seen before. They're waiting for my results with offsetting the mounts before tackling the second problem.

The antennas are still in production. I reviewed a lot of comments about on-glass antennas using one of the newsgroup search pages. While a few people had trouble with Larsen antennas, the majority of the comments were quite favorable.

A minor point, but a 200Hz shift is actually the "standard" for
Pactor, although a lot of the fellows do use a 170Hz shift.

Ken-

Now is the best time to get on Six Meters. If you wait a couple of years, the sunspot cycle will be decreasing.

There are reports that there is still activity on AM. When the band is open, put out a call on 50.400, and see if anyone is listening. If you just monitor, everyone else may be just monitoring as well.

What type of built-in antenna tuner does the 746 use, the mechanical motor driven coil/capacitor arrangement, or the computerized switched lumped inductance/capacitance setup?

ALSO - are there any clear deficiencies in design or operation users consistently report? I realize this last issue is pretty much an individual call, but I would like to hear any complaints before I finally part with the loot to buy one...

50.4 is the "AM" calling frequency. The ones you listed are for SSB
and FM. Yes there is a mode other than SSB and FM. Also 28.4 is
"TEN" meters, not SIX.

7016. Wanted: dead 51J-4 mechanical filter

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-24 00:00:00 UTC

Hello,
I need one Collins 51J-4 mechanical filter for parts to fix my 1.4kHz filter...it has an open coil. If you have one laying around with at least one good coil (should be about 20 Ohms DC), I'll be glad to pay shipping costs. I think I can use any of the 51J-4 bandwidths to repair mine as they all have the same DC resistance and presumably the same coil bobbin.
Thanks & 73
Bob

Hello Everyone,

I have the following for sale. All items are in very good condition or better unless otherwise indicated. I would like to sell the indicated packages as packages unless I get a great offer otherwise. Below prices include CONUS UPS shipping. Payment by US Postal Money Order ONLY, and prepaid. NO C.O.D.'s, etc. Serious offers considered. Please e-mail directly to n3fvg@worldlynx.net if interested.

ICOM HF Mobile Package - IC-706 HF/6M/2M mobile with Icom AT-160 automatic antenna tuner, OPC-599 acc cable, Comet CF-530 HF/VHF duplexer and all related standard accessories, manuals and boxes..... $ 950.00

ICOM IC-03AT 220 Mhz. HT package - IC-03AT with BC-35 desktop charger, brand new BP-7S battery, BP-8S battery, IC-DC1 Mobile Adapter, Icom speaker mic, manuals, standard accessories and boxes..... $ 325.00

STANDARD C228A 2M/220 HT with CNB-153 battery pack, rubber ducky antenna and plug in charger ONLY..... $ 300.00

BEARCAT BC-3000XLT handheld scanner, 25mhz.- 1.3 ghz. (less cellular but will receive "images), rubber ducky, ac adapter and charger, battery pack just rebuilt. Includes copy of instruction manual..... $ 225.00

RADIO SHACK PRO-62 handheld scanner, 30mhz.- 960 mhz. (less cellular and 220 Mhz. band), with optional leather carry case, rubber ducky, alkaline batteries, and standard accessories in box. Only programmed, then put back in box, never used..... $ 150.00

MFJ-989C Versa Tuner V HF antenna tuner. No original box or manual but used very little. In excellent condition..... $ 250.00

KENWOOD MC-60A amplified microphone. In box, excellent condition, no manual..... $ 100.00

KENWOOD UT-28S 10M unit for TM-641/741/642/742 mobiles. Brand new in box, never used..... $ 260.00

(1) KENWOOD MC-44 microphones, 8 pin din plug, brand new in boxes, never used (tentatively sold) ..... $ 25.00

DIAMOND MX-214 Duplexer (2M/220)..... $ 45.00

Unknown brand HF SWR/Wattmeter, German mfg.?, says it handles 1KW but I wouldn't try it. Probably handles 300 watts, in box..... $ 25.00

(4) JOBCOM UHF handheld portables, 2 channel, 2W, 1 channel installed,
3 on same frequency, 1 on different frequency. Easily re-crystalled.
With rubber duckies and plug in chargers..... $ 200.00 for set

MAXON VHF-hi , model CP-0510 handheld portable, 4 channel - 1 installed,
with drop in charger..... $ 50.00

TERMS: PREPAID only by US Postal Money Order. Prices include CONUS UPS
ground shipping.

7018. R-7000 on 12 VDC?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-24 00:00:00 UTC
From: Thomas Marcotte <marcotte@iamerica.net>
Message-ID: <37EB8799.135B@iamerica.net>
Source record: 97598
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner

Has anyone adapted their Icom R-7000 to run on 12 VDC?

I have a kit for my R-71A which allows this, and the setup in the R-7000 seems very similar, but I've not heard of anyone doing it.

The R-7000 run on AC gets very hot, and also, my AC supply makes a loud whining noise while it is warming up.

Anyone?

7019. Mid Island ARC

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-24 00:00:00 UTC
From: kc2ayc@aol.com
Message-ID: <19990924092047.26737.00002902@ng-fi1.aol.com>
Source record: 97599

The Mid-Island Amateur Radio CLub is located on Long Island, NY and serves amateur radio operators in Suffolk and Nassau Counties as well as parts of New York City. For information on our repeaters please check our web site at: http://www.qsl.net/mid-islandarc/index.html

Our next hamfest will be the Sunday after Thanksgiving and we are calling it Thanksgiving Fest '99. The fest will be located at the Knight's of Columbus Hall in Patchogue, Long Island for more information contact Mike-N2OX at : n2ox@aol.com

MIARC is an ARRL affiliated club and membership is open to all people, hams and non-hams alike. The yearly fee is $20 for a Full Member. $5 for a family member. (Family of a Full Member) (Family Members get all the benefits of a Full Member, but are not allowed to vote for or run for the Board of Directors, or an Office of the club.)

Our General Membership meetings will be held on the FIRST Tuesday of each calendar month. All meetings (Except VE sessions) will start promptly at 7:30 p.m. The location will be in the Brookhaven Recreation Center located at 20 Wireless Road in Centereach, NY. You do not have to be a member to join us. You do not even have to be licensed! Usually there will be a guest speaker or a nice demonstration having to do with Amateur Radio. (and doughnuts too!)

The club sponsors ARRL VE sessions. The location is same as the general meetings. The sessions will be held on the LAST TUESDAY of the month at 7 pm. For more info you can contact Mike Christopher W2IW (ARRL VE liaison for the club) at the following numbers 516-696-0984 (days) 516-736-9126 (eves)

NET: The Club Net as well as Newsline run at about 7:50 on Sunday evenings with Newsline starting at 8PM on the 449.500 repeater (PL=179.9).

Public Service: The club actively promotes Amateur Radio Public Service and encourages its members to pass health and welfare traffic. Club officials have taken an active roll in passing international health and welfare traffic to war torn nations and those suffering catastrophic natural disasters.

Again for more info, check our web site at: http://www.qsl.net/mid-islandarc/index.html or contact W2IW@aol.com

7020. Help - IC-706MK2 also Alinco DR-110

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-24 00:00:00 UTC
From: W1kI <W1kI@Arrl.org>
Message-ID: <37EB7AE6.D6B2E47F@Arrl.org>

Hi All,

I have an Icom IC-706MK2 that Ii am using mobile. I really like the rig, but it suffers from the same low audio drive problem that most of the other IC-706 rigs seem to have. It has even been back to Icom. They claimed it needed re-alignment and did go through the rig. ic ame back much better, but I still need to run the mic gain all the way up with the processor on to get the 100 watts output claimed by the manufacturer. I have done the "mic mods" with no success. Icom does have a mod posted on their website indicating a change in value for R236 from 27k to 68-82k. This mod was originally indicated for the first '706, but I am told that the circuit is the same and that the mod will work just as well on the MK2. Does anyone know where R236 is located on the main board? A good description or pictorial diagram would be appreciated.

Also, does anyone have the wiring diagram / pin-out for the Alinco DR-110 mic?

Thanks in advance and 73.

Source record: 97607

Hello everyone. I'm interested in starting a college radio station at my school. I'm basically just wondering if anyone could help me understand the basic equipment that would be needed, where I could get it, and how much it would be.

I am wondering if I can count on local businesses for donations of equipment/money.

Also, I read that it generally takes 9-12 months for the FCC to recieve a building permit. Is there anyway around this?

If anyone knows the answers to any of these questions, I'd appreciate a reply. I want to be well educated and know exactly what will be needed when I present my idea to the heads of my campus.
Thanks a lot!!!

Mike

I'd suggest buying a 2m mobile, and setting it up as either a base or mobile, depending on how often you're in your car. There are a few in the $200 range. (To run from home, you'll need a 12V, 15A power supply, about $100-150, which means you may want to opt for a handheld w/ rechargeable batteries instead. These you should be able to find for the same price range. If you go this route, also pick up a 1/4 wave flexible whip antenna, for about $25.)

For specifics, I think all the majors are pretty good, Icom, kenwood, yaesu, alino, and I've also heard decent things about adi. I have a yaesu 2500 mobile, and icom ic-t2h handheld, but there are lots of other nice ones, too. I'd probably stay away from the 300mw handhelds for a first radio, though.

Then, go to a couple of local ham club meetings, pick the one you like the best, and join it, or talk to them on the radio, then join. Finally, use the 2m mobile to talk with the other hams until you figure out what you want to do besides 2m, then figure out what kind of radio you want, and where to get it.

It's tough to pick a radio until you're sure of what you want to use it for, and that's tough to know until you're been exposed to some of the possibilities. It's like asking "what kind of car should I buy". No offense intended, welcome to the hobby.

Final thoughts:

Spend some time listening to the local repeaters before you pop right in. Different repeaters have slightly different styles of use, and I find it respectful to operate accordingly, so long as you're also being courteous & following the rules.

Monitor 146.52 simplex when you can.

Well, I have a 7100, and it also runs hot on AC
power, and was noisy, too. I guess they didn't
think it needed changing!

I run mine on 12V (13.8 actually), from a couple
of gel cells being charged by a little CB supply.
Works great! It does draw more than a couple of
amps, though, so you'll need a big enough supply.
This radio came with a 12V cord, that plugs in
place of a jumper on the back of the radio.

No noise, much less heat. Great radio!

I think you need to look at what kind of amateur radio activity you
want to do.

If you get on the VHF bands and work the local repeaters, that's fine
and dandy, but it's not much more exciting than talking on your cell
phone. As a matter of fact, cell phone service is patterned after the
early ham radio repeaters.

On the other hand, if you want to get on the HF bands, 160 thru 10
meters, put up antennas, and talk directly to other hams without going
through repeaters, that's a lot more involved, and quite a bit more
fun -- it's more of what ham radio is really about.

For VHF repeaters, your $500 budget is more than enough to get a
transceiver.

On the other hand, for the HF bands, $500 will get you a decent used
transceiver, but not a new one. Figure $800 to $1200 or so, if you buy
new, and get the requisite odds and ends that are inevitable.

As for table top or mobile size transceivers, if you're going to be
working mainly out of your house, I'd get a table top size -- the
knobs will be bigger and you won't have to go through so many internal
menus to get at what you want.

I'd recommend you go to the AES web site (Amateur Electronic Supply)
and order their paper catalog. It's very big and complete, and lists
virtually all the ham equipment available. If you're going to do HF
work, check out the lower priced transceivers from Icom, Kenwood or
Yaesu. Alinco may be a little cheaper, but the quality may not be so
high. For VHF, the same brands are fine.

You should also subscribe to QST with the ARRL. Once you subscribe,
you can go to their web site and look up past product reviews of all
the equipment that's out there.

The identical kit installs in the R7000, same way as in the R71.

>The R-7000 run on AC gets very hot, and also, my AC supply makes a loud
>whining noise while it is warming up.

Both the R7000 and R7100 run far too hot. When racked and stacked with
other equipment, most receivers eventually fail. We saw this over and
over in large government installations.

The solution is to run the things from an external 12 VDC supply, to
remove the heat generating component. You likely will be doing this
very soon, as the whining noise is the final symptom hours before the
internal supplies croak.

In the much improved R8500, ICOM remoted the AC supply. This keeps the
heat as well as the weight down, allows for a smaller package, makes
conversion between 110 and 220 volts easier (just change the power
supply and leave the radio alone).

Message-ID: <19990924153907.06681.00002429@ng-ch1.aol.com>
Source record: 97617

hello,

i have a kenwood ts530s hf transceiver for sale or trade. solid
state w/tube final. tubes are 100w out. also have a spare set of finals and
driver. comes with mc50 mike, manual and box.

i would like to trade it for a kenwood ts-130v (qrp) or a ts-660
rig. i would also be willing to add a mfj 949 tuner if this would make the deal
better.

cash price for ts530s alone: $400.00. would help with the shipping
to lower 48.

For Sale : Wilson 55' crank-up monopole tower (older, but in good condition), with base and all accessories. Three sections, folds down to around 20'. Also included with the sale is a CDE T2X Tailtwister Rotor, box + cables, 1-Mosley CL-33 Tri-Band beam (10, 15, & 20 mtrs) and its accessories. All equipment was in working condition when it went out of service last year.

Asking $400.00 for the whole shebang (wife says its got to go). Pick up only from my backyard in southeast Michigan. Tower and beam are disassembled and ready to go.

Thanks and 73,

Chris

R'm not sure if this is pertinant or not - but will throw it in
anyway. :)

I bought a MFJ 1724 2M/70CM mag mount antenna for a whopping 14.95 at
HRO. I used this antenna with both a HTX-404 and with my current
FT290RMKII. It has worked well with both radios and even came with a
BNC/UHF adapter. Very good value for the money.

Works so well that the other night I was cheking into the local 2M NTS
net while driving down the road. I had the Yaesu at full power (~25W)
but was getting reports that I was hard to copy. I was not THAT far
from the repeater, but we had windows down, so I thought it was road
noise. About 10 mins later it dawned on me that I had left the antenna
IN the trunk! Talk about stealth operating! :)

Something else to consider Ken, why not start a group in your area that meets each weekend or whenever to operate a little 6m AM, before you know it the Heath Lunchboxes will get dusted off, guys will wire up mics for their old Gonset rigs and you'll make your own 6m activity. I've worked a couple locals but am thinking of doing the same thing.

My 7000 is neither hot nor noisy. However, I'm now concerned a bit, given the above comments. It appears on the schematic that there's a jumper connector on the "regulator" board which takes the 12v out, then back in. May I assume that that's where the "mod kit" facilitates external DC? Thanks.

I am assuming several things: 1-you want an HF rig, not a dual bander. 2-500 is a realistic spending limit and you don't want to spend DOUBLE that on a new radio (Icom, Yaesu, Whatever).

So, my recs are as follows:
Buy a used rig from any of the big 3. Some ideas are as follows: Icom 735, great radio, and cheap now. Next, Yaesu FT-757.... mid 80's design, works great, hear lots of them still on the bands, and has a really nice matching tuner that looks great next to the radio. Next, a Kenwood TS-440, again, 10 year old design, but a perfectly usable radio. All of the above should be in your price range of 500 bucks. To hell with DSP at first, you do not need at, and most of the DSP in modern radios, and the add on boxes, while nice, are not required, and only make listening to long conversations EASIER, nothing more. You will still hear fine without it, and truse me, NONE of them make SSB signals "POP" out of nowhere. I Use an FT-1000MP, and have a Timewave DSP-599ZX, and have owned in the past a TS-870, and an Icom 775-DSP... none of the DSP is that great.

Okay, that said, a few more bucks gets you the following:

Used Yaesu FT-900 CAT -- WONDERFUL radio for the money, with the collins filter also. Next (if you like small, menu driven radios, I personally don't, but this is a great radio performance wise) -- The Icom 706, and you do NOT have to get the 706-IIg model, you can pick up the original ones for cheap.

Good luck

7056. HP-410C Meter

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-24 00:00:00 UTC
From: Denis Sharon <denis.sharon@worldnet.att.net>
Message-ID: <7sh86t$5h5$1@bgtnsc03.worldnet.att.net>
Source record: 97636

Hello,

I have two HP-410C meters that I thought I would offer here before listing on eBay. For those who might not be familiar, the HP 410C is one of HP's enduring classics. Among it's other attributes, it measures AC with very good sensitivity up to 700MHz making it perfect for servicing BA (or any RF gear, actually). It is the meter specifically referred to in several Collins manuals.

Both units are relatively clean cosmetically but, like their owner, are showing their maturity. The front panel lettering is worn though still quite legible. Any other scratches or marks are superficial though and there are no dents or other serious flaws. They each include the HP 11036A AC probe and work perfectly.

The price is $150 each including very careful packing and shipping to any U.S. mainland address. That's a deal.

I have a third unit that is fully functional and of similar condition except that it does not have the AC probe, the front panel marking are more worn than the units mentioned above and the snap-in cap for the on-off switch is missing. These switches were used on many different HP pieces of the era and a replacement cap, which snaps in or out without the need for tools, should be easy to find. How 'bout $65 for this one including shipping?

>May I assume that that's where the "mod kit" facilitates external DC?

Turn the radio upside down and open it up.

Inside you should see a 3 pin Molex connector, white translucent
plastic, with the two outer pin slots occupied. The connector probably
is just flopping loose inside the radio.

One half of that connector is a jumper, usually a red wire. The
internal 12 VDC supply comes into the connector, then goes through the
jumper, then back out, to power the radio from AC.

The external power kit is nothing more than a bracket that lets you
mount this Molex connector through a pre cut hole in the rear panel,
and a 12 VDC power cord with wire leads into a mating Molex connector.
When you run the radio on the internal supply, you leave the jumper
plug connected, at the rear of the radio. When you run on external 12
VDC, you pull that jumper and plug in the DC power cord.

We hung the jumper from a lanyard on the back of the radio so it
didn't get lost.

You don't need the kit. You can do the above yourself, easily. The kit
is just a bit more elegant.

Same kit, same part number, for R71/R72/R7000/R7100 and probably some
others.

Butch:
If you are looking for a Xcvr control program, Kenwood has a very nice TS570 program for windows that can be downloaded from their website. This program will also control other Kenwood rigs but the graphics appear to be styled for the TS750. You can download this program from: http://208.197.91.81/

For R-5000 or TS440 operation, fineware offers Smart Kenwood Control 32, which I use with my Kenwood. This software also provides a database for broadcast stations. To see this program, check out: http://users.erols.com/fineware/skc.html This program is outstanding.

Howdy,

I have a good condition PRO-91 with rubber duck antenna.
Radio has a few scratches, but nothing major.
No belt clip, box, or manual, but the manuals should be available from
the Rat shack web site.

Will also include original Spectrum database from Percon (1996 edition)
I do not have any time to devote to scanning, and need $$ for other
interests...

Price is $115 + $5 to ship USPS priority 3-day OR trade for Icom Q-7 HT.

Does anybody even know if it has CW capability?
The guy I taked to on the phone (1-800-the-shack) didn't know, but DID say
that they might be out by the end of Sept.
Isn't this the same rig as the "Eagle Sidewinder"?

7063. STANDARD 568A HT

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-24 00:00:00 UTC
From: John Thurston <n0meq@mitec.net>
Message-ID: <37ec5620_2@news5.newsfeeds.com>
Source record: 97643

From: John Thurston <n0meq@mitec.net>
Subject: STANDARD 568A HT
Date: Thursday, September 16, 1999 12:20 PM

Does anyone know where I can obtain parts for a Standard 568A HT that I bought 2 years ago? I am looking for a plastic case for it because the radio got dropped. I have had this radio in repair since last March 1998 and have been told by Burghardt radio that they have given up with trying to get parts...

Any help would be appreciated

John

Cross-posted to: rec.radio.swap,alt.ham-radio.marketplace,rec.radio.amateur.equipment

Just need a few more Motorola UHF Maxar
50, PL type radios, for spares units, for
our 440 receive links.

Ok if these units are missing the microphone,
power cords or mobile bracket (accessories).
Please dig around and see if you have this older
1 or 2 channel crystal, compact UHF mobile in
your, junk radio box.

Poor cosmetics ok, but it MUST BE WORKING,
must be UHF and PLEASE, it MUST BE A Motorola
MAXAR 50!!

We will be at the CFMC, Radio Expo ham fest
in Greys Lake, Il. this entire weekend (09/24 - 09/26).
Bring those fairly priced Maxar 50's on by for instant
CASH$$$ We will only be outside this year, in the
HiLo camping trailer, located towards the middle,
north side of the fair grounds. Orange Ram Charger
truck plate # K9SAD. Also be sure to check out all
our great deals on Motorola radio equipment, because
you know who works for the big M in Schaumburg.

If you don't make it to the hamfest, and need
to contact us about Maxar 50's than please, DO NOT
POST REPLIES here on the N.G. Contact us PRIVATELY
by E-Mail or telephone with any information you have.

Hope to see you at Radio Expo '99;

Do you have some problem with it.
And stop righting "it is commercial, copyrighted software program" what it that mean. You can download any
program that is commercial on internet now, so what is this different with this.

And stop pushing when nobody call you.

Today everything is FREE.

Source record: 97781

Yes It is Para Dynamics PDC9 133/430 Mhz and I agree with you and all other people which pointing some kind of problem with the cables, connectors and SWR meter. When I move the feed point I am getting different readings from SWR meter included the 9W output. This is not possible for the source it is FT-50 max. 5 or 6 watt. This is only possible if antenna have more then 50 ohm of emp. ??? is there any other explanation ?

Levent

I would recommend the Kenwood TM-261a 2 meter mobile. It's not real expensive, between $200 to $250, a little more with the optional tone decoder, and it works very well. I'm using mine in the house plugged into a 20 amp power supply and I'm using a 15 dollar 1/4 wave MFJ base antenna (WOW DOES IT WORK!!!). I've also had the radio in the car with pretty close to the same performance.
Whether you use your radio in the house or car, your budget of $500 would be plenty for a radio like that, plus the other items you'll need to use it (i.e. antenna, coax, ect.). All the manufactures have similar radios and some may be better than others. All you can do is ask questions like you have and search the net for amateur radio stores and do a little shopping. Don't forget that all the manufactures have web pages also.
Hopes this helps

I had two FT-530 radios and neither if them had a green wire to cut for a mod. I remember there being either a row of 0 Ohm resistors or diodes.

Howdy,

New content is being added this week. Check out the SWL links, the DX news, or the Propagation Center.

I've moved the QSL and Callbook section off of the main page and onto a page dedicated to just this information. And I've added a lot more to this section.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

7087. Re: TS-450 rcvr. overload problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-25 00:00:00 UTC
From: WB <willyacht@yahoo.com>
Message-ID: <zeOG3.20840$1E2.159226@ozemail.com.au>
Source record: 97644

Dr Ulrich Rhode covered the modifications that could be done to turn this radios receiver into a high spec receiver. It involved changing the PIN diodes and making the ATU work in receive. The 3rd order intercept went up to +26dbm which would beat all current model transceivers.

7091. Question about Kenwood AT-50

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-25 00:00:00 UTC
From: Gil Bishop <gbishop@home.com>
Message-ID: <KMVG3.1440$rH.53062@news1.wwck1.ri.home.com>
Source record: 97648
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

Just bought a very nice TS-50s and AT-50. Unfortunately, though the previous owner had lots of documentation on the radio, I'm missing the manual for the tuner. Looking for a photocopy, scanned tif email, grainy 8x10 colored glossies with circles and arrows and a paragraph on the back of each one ;~), or even an original. Gladly reimburse for copy/snail-mail costs.

Barring a manual, any experiences using this tuner mobile to load a 102" whip or ???, hopefully providing at least marginal coverage of 7-29Mhz.

Tnx in advance and 73
Gil

XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
Suggestion: Use a transformer with several 'one to one' ratio windings
to couple the speaker outputs and ensure that the output circuits of
each equipment do not have any DC connection, only audio.
You never know, even if one equipment was switched off that if the
speaker circuits were connected directly together, DC could feed back
from some other equipment and damage the output of the the switched off
equipment.
Also some speaker output circuits might/might not be connected to the
chassis potential of vehicle etc. so direct connection of out put
circuits could be 'potentially' (pun intended!) damaging.
You are only dealing with 'voice' frequencies (300 to 3000 hertz etc.),
so the transformer could be fairly low quality. Even one designed for 60
hertz would prob. be OK to isolate voice frequencies.
Might be easier to use a seperate speaker?
BTW please let us know what you eventually decide is your best
solution.
Regards.

7112. NEED ICOM 730 AF FL-45

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling
1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped). If you
are interested in over 12 issues or the entire collection, make me an offer. I am willing to ship anywhere on
this planet so long as you are willing to pay the shipping costs.

Here are the issues that I have remaining:

QST

[1992 through 1998 issues are $1.00 each - 1999 issues are $2.50 each]

1992 Jan Feb Mar April
1993 Jan Feb Apr May June July Aug Sept Oct Nov Dec
1994 Jan Feb Mar Apr May June July Aug Sept Oct Dec
1995 Jan - Dec
1996 Jan - Dec
1997 Jan - Dec
1998 Jan - Dec (May issue is missing page 73)
1999 Jan Feb Mar Apr May June July Sept Oct $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last
time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.
If you would like to check my references, please feel free to do so. I am on Ebay and my user ID is: Andrew45

7115. Antenna Advice Desparately Needed!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-25 00:00:00 UTC
From: n7lxo@olympus.net
Message-ID: <37ecf8b3.6631864@news.olympus.net>
Source record: 97672

I'm planning to move into a neighborhood that has CC&Rs and
have to get an antenna approved. The 1 acre lots are reasonably well
treed with heights approaching 30 feet so screening of a vertical or a
mast should not be a problem, but the committee has strong control and
may want minimal or none and must be convinced.

What mast would present the minimal profile except when raised?

Re verticals, what is your opinion of the GAP Titan DX relative to
others of similar specs?

Have you any recommendations re other approaches?

A quick response is needed please.

73 Chuck

7116. GAP Titan DX Antennas. Your opinions, please?

n7lxo@olympus.net (Charles O'Hara)
shared these priceless pearls of wisdom:

-> I'm planning to move into a neighborhood that has CC&Rs and
->have to get an antenna approved. The 1 acre lots are reasonably well
->treed with heights approaching 30 feet so screening of a vertical or a
->mast should not be a problem, but the committee has strong control and
->may want minimal or none and must be convinced.

Lemme see if I've got this straight. You are moving into a community knowing full well that antennas might not be approved. You are doing it anyway and hoping against hope that you might get some sort of antenna past the homeowner's association committee. Is that about it?

->A quick response is needed please.

Simple. Get preapproval before you move in. If approval is not forthcoming, you've got a pretty clear choice, don't you? Move in and use an attic antenna or live elsewhere.

My experience was that it was cheaper to send the R-7000 to ICOM for repair as opposed to buying the service manual and the parts to fix the box! STRONG suggestion - when you do get it working, do NOT use the internal power supply, but run it off a 12-14V external supply. Heat from the P.S. kills all sorts of things, including the display electronics.

I don't recall hearing you on the air. I'm located in Madison Heights MI (14 mile road and Intrastate 75). I have a Yaesu FT-847 I just got new and I am working on a 6m antenna. The problem I have is that I live in a ground floor apartment with zero outside access like a balcony etc. So currently I work just 2m and 70cm using a high gain (4.5 dbi on 2m and 7.5 dbi on 70cm) vertical antenna inside the apartment. When I'm on the air I'm talking with a few other friends on the Southfield repeater (146.820MHz, negative offset and a pl tone of 131.8 Hz). Sometimes you can catch me on the Detroit repeater (444.000 MHz positive offset and no pl tone required). The Detroit repeater I have keyed up with a received signal of S9 as far north as Oxford MI. I'm on the air normally around 5:30 PM, during the week, either at home or operating mobile on my way to night classes at LTU located at 10 mile and Northwestern Hwy.

Some of the other people you may know are Larry KC8GTR (my brother), Bill KB8UFQ, Harold KC8GTS, Greg KC8KRR. My brother is looking for some 6m activity too.

Will-

I would be interested in where to find these modifications.

Another thing I've noticed with the TS-690S (a 450 with Six Meters), is
that the noise limiter causes more noise than it eliminates, when a band
is really hot with foreign broadcast stations.

Gil-

This tuner has a limited range of VSWR that it can tune. It can tune just
over half of 40 Meters when using a Hustler antenna with 40 Meter
resonator.

It would just be luck if it could tune another band. For example, I was
able to tune 10 Meters with the 40 Meter resonator in place. I doubt you
will have any luck with anything beyond 12 Meters when tuning into the 102
Inch whip.

I replaced the TS-50/AT-50 when the Icom 706 first came out several years
ago. The Icom AT-180 doesn't have quite as much range as the Kenwood
AT-50.

7136. Best dual-band HT?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-25 00:00:00 UTC
From: Lorraine Raymond <lraymond@slkc.uswest.net>
Message-ID: <37ED9BD6.BFE4598A@slkc.uswest.net>
Source record: 97693

I'm looking to buy a new dual-band HT in the $250-$300 range. I like the Yaesu FT-50RD, and want to hear some opinions about it and other comparable HTs from Kenwood, Icom, Alinco, etc. One of my requirements is that the radio be capable of operating on AA alkalines. I'd like wideband reception (such as 76-999 Mhz, for example), but that's not a requirement.

Please e-mail me with your response. Thanks.
Mike
lraymond@uswest.net

7137. HELP Choosing a Dual-Band HT Please?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-25 00:00:00 UTC
From: DavidC <b4e@earthlink.net>

Source record: 97694
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.swap

I need a 2/440 HT. I plan to use it to monitor local public service frequencies during emergency response activities, and for occasional 2 and 440 repeater activity.

I see Standard C508's for $150. - $175. Cheap and small but low TX power.

I am told that the Alinco DJ-V5 may be what I need. Any comments about it as a reliable HT for my application?

Do either of these scan across bands? I am told the new VX5R and some others do not. I need that.

Other small HT's folks would recommend? I will almost have to go used for budget reasons. Trying to settle a new shack into a new home really stretches things!

Thanks! & 73, DavidC K1YP

Message-ID: <aRhH3.399$L%2.3845@dfw-read.news.verio.net>
Source record: 97696

All:
I have a Toshiba Satellite 410CDT color notebook computer for trade. For exact specification check out this link:

http://www.csd.toshiba.com/cgi-bin/WebObjects/Toshiba.woa/wa/showSSDetailedSpecs?productTypeId=1&productFamilyId=10&productSeriesId=191

The computer have only been used in a home environment and never mobile. First as my secondary PC then as my wife's email machine. It is in excellent condition both aesthetically and technically. In summary it is a Pentium 90, 40MB RAM and a 810MB hard disk. The unit has a built in CDROM drive, Active matrix screen, 28.8 PCMCIA modem and network card.

I would like to trade for a tri or dual band mobile of recent vintage. The unit must be in good condition and have 2M + 70CM. I would prefer to trade locally (100 miles radius of Sacramento, CA).

Please contact me via email A.S.A.P.

Kevin

I used such an antenna. It worked well. I used shirt buttons for insulators. My biggest problem was that birds occasionally flew into it and broke it. If birds can't see it, then your neighbors shouldn't object...

If it were me, I'd start house-hunting elsewhere... But understanding that sometimes the WAF (XYL approval factor) and other things must override one's desire to have an effective station...

Could you get a wire antenna up into the trees? If done carefully, it could be nearly invisible. For multiple bands, you could either run ladder line into the shack (admittedly that poses an aesthetic problem: ladder line is difficult to hide without comprimising its electrical characteristics, but if the foliage is thick enough it may not be a problem) or put several dipoles on a common center insulator.

Invisible random end-fed wires can work pretty well. If you can find some #30 magnet wire (Radio Shack used to sell 200' spools) it will work nicely. The big problem is mechanical, providing enough flex to keep it from breaking. I'm told rubber bands are the answer to that problem. Don't worry about power-handling capability or losses; a #30 antenna will handle the full output of a 100-watt transceiver.

I've heard less-than-good comments about the Gap antennas, though I've never tried one myself. Of the ones I've used, I've had the best luck with the Butternuts. But their exposed coils (while quite effective RF-wise) are not all that aesthetically pleasing.

It's too bad AEA is out of business, their Isoloop worked very well either as an attic antenna or something you could stick in the top of a larger tree. Maybe you can find a used one? The big problem with magnetic loops is very narrow bandwidth, you have to retune the antenna if you QSY more than a few kilohertz.

If worse comes to worse... you could put up a flagpole... few committees put aesthetics before patriotism, though there are some that do...

Hi:

I'm still getting started with all of this, and was hoping someone here could give some advice.

My primary interests at this point are handheld on 2M and a little with 70cm. I have an HT (FT-50RD), and may go for a mobile install of it with an amp, or a separate mobile unit.

What accessories and test equipment would it make sense to start with?

Thanks,
Gary

Happy trails,
Gary

I found a manual for a Heath SB-10. This is the SSB adapter
for use with the Apache AM transmitter.

This manual appears to be new. It has no check marks in it,
and looks like it just came from Heath. Collector quality,
for sure. $25

I also have a few other Heath manuals available:
GR-2000 TV Set $ 10
GR-2050 TV Set - Five book set $ 18
GRA-2000-1 TV Clock $ 3
GRA-601 TV Clock $ 5

All are in good shape.

Prices do not include shipping from Florida.

Thanks.

Actually, for SSB use on 10metres, I prefer the HTX-100. Easier
to use, better RX and noise blanker.

I do have an HR-2510 and it's preferred use is with a transverter,
due to it having LSB and FM. I don't use it very much, so I probably
should sell it while there's some demand for 10M rigs. I've had
a few CBer's interested in it, but couldn't sell it to them with
being in contravention to the Radiocommunications Act, not to
mention amateur ethics.

Hello, I am selling a preassembled Ramsey FM-25A FM Broadcast Band transmitter. I had it professionally assembled (by my father, who is an electronic technicion) but VERY rarely used (I bought it and then soon realized that I didn't have the time...) It has about 15 minutes of transmit time on it ALL TOGETHER (unit was bought 8 months ago). Comes complete with everything it ships with, instructions, schematics, spare parts, etc. Transmitter currently set to 99.7 MHz, but of course you can easily change it to anything in the FM band (using DIP switches) from 87.5 - 107.9 MHz. I am located in PA and will ship anywhere in the 48 states. I am looking for BEST OFFER. Please email me if you are interested. Thanks for reading.

7163. Microphone recommendation for TS-450

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-27 00:00:00 UTC
From: larmar@eaze.net
Message-ID: <37efe477.2360841@news.eaze.net>
Source record: 97553

I want to buy a desk mic for my TS-450, and need some help. I first planned to just get the MC-60A, but the few I have heard on the air did not impress me that much. I have heard some good things about the Heil's, however, some of the Heil mics that I hear on the air have such a bassey, or muted sound. I also noticed that they have two types, one being the "gold".
Any suggestions out there on a good desk mic to use?

Thanks

Larry

You are bound to get a dozen different recommendations. I have a TS450 and use an Astatic 10DA SSB mic on an amplified stand. If I want more 'punch' I use an Astatic D-104 crystal element mic. The key to the impedance match with these hi-z elements is the use of the transistorized amplified stand. With that stand it is a simple plug-and-play arrangement. I have always preferred Astatic mics and they are (esp. the D-104) part of Amateur Radio history. Astatic is still in business today since starting out with the D-104 in 1933. The also have a website and HRO carries the basic models. You can outfit yourself with an Astatic mic for around $100. The very popular all-chrome Silver Eagle D-104 is easily found (for your convenience) at any CB shop for right at $99. Post back to let us know what you decide and why.

I hear more and more HFers doing this...only they're using 220/440
control links to remote base HF stations located miles away from
their control point. Squelch tails on 40M? You bet!

One of the locals here has a dial-up phone line link to a 350W
CW HF remote transmitter. All you need is a touchtone telephone
and HF receiver.

The optical encoder needs to be aligned.

W/O a scope you can tweak at it and by trial and error get close.

There are 2 holes in the back of the encoder and inside each hole is a
pot. Carefully note the position of the slot on each and first try
turning them back and forth and then back to the original spot and see
what happens.

If no go then try each one in small increments until the problem goes
away.

I have a MC60A, a Heil HM-10 (with both elements), and a D104. I set up an "on the air test" where a fellow ham taped my voice with all 3 mics and then sent me the tape...The Heil with the DX element sounded the best to my ears....your ears may vary :-) All three (or 4, including the 2 Heil elements) were pretty good.

Hi,
I have a Kenwood IF-232C serial interface and the IC-10 chip set to
allow the TS-440S to be remotely controlled. The unit is ideal for
computer interfacing the TS-440S, TS-940S, for use with a computer
control / logging program, remote base use for repeaters, etc.

I will sell the pair together for $79.50 shipped. All cables and
manuals
included too.

thanks,
Joe K7JOE

7175. Kenwood HF CW and SSB Filters for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-27 00:00:00 UTC
From: Joe K7JOE <k7joe@yahoo.com>
Message-ID: <37F0130A.B22B2084@yahoo.com>
Source record: 97565
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Hi,
I have the following Kenwood filters for sale. All are solder-in type
and designed for the TS-120/130/180/430/440/930/530/830 series HF rigs:

YK-88C 500 Hz, second IF $75 quantity available: 2
YK-88CN 270 Hz, second IF $70 quantity available: 1
YG-455C 500 Hz, first IF $105 quantity available: 1
YK-88S 2100 Hz, second IF SSB filter $75 quantity available: 1

For those running the TS-440S radio, the YK-88S and YK-88C are an
awesome
combination. Same goes for those running the TS-130 series rigs.

The YK-88CN and YK-88C are the typical "narrow CW filter" used in Knwd
rigs

For those using the TS-830 and TS-530, the YK-88C and YG-455C are an
awesome
CW filter combo providing maximum VBT flexibility and selectivity.

thanks,
Joe K7JOE

This is a real *bad* idea. It's illegal (trespassing and electrical codes), it's dangerous (for obvious reasons), and the close proximity to power lines makes reception difficult. If you do decide to do it, make sure you write down Dwight's name so that your widow will know where to start with the lawsuit...

With all due to respect to Mr. Vlaski's genius, this is Mickey Mouse software, and the user should be warned. When applied, it wrecked havoc with MY FT-50, and it was quite awhile until I restored it to its original state with all the settings I had previously used. I have both the store-bought version and Mr. Vlaski's, and while his will probably let you do fancy tricks, caveats do apply!

Yep:

I'll bite, and I'm not competing with
anyone. I've only been posting weekly, for
the last 2+ months, that I'm looking for UHF
PL Maxar 50's in the reasonably, fair market
priced, $30 - $50 dollar range. I guess you
missed all my posts???

Monty; I'll buy all 8 of your accessories-less
UHF Maxar 50's for your advertised price of $200.00,
including shipping.

Where and whom do I send my pre payment of a
$200.00 Postal Money Order to for "immediate shipping"??

Thanks;
Gregory Gately (K9OYO)
Brookfield, Il. 60513
(708) 387-2490

P.S. Rich offered me all his Maxar 50's for $25 each a
few months back. But we found out that Rich's Maxar's
are VHF units, I need UHF ones!!!

MSisco9939 wrote:

Yep:

Guess I will have to compete with Ron

I have picked up a 8 more Motorola UHF Maxar 50's...
These are one of Motorolas smallest Mobile radios suitable
for areas with minimum space requirements. All look unused
and are in Mint Shape. Checked out and are fully operational.

Only catch !, They are a Crystal Controlled Radio, however
one can get them on line for $30.00.. They require a $15.00
Receive and Transmitt Crystal, and are easily tuned to your frequency.
Picture will follow add.

Asking $35.00ea+ $8.00 for shipping and handling

Buy them all for $200.00 and I will foot the bill on shipping

With a full set of acc;y (power cord, Mike, Bracket, please
add $30.00)

Terms:

Acceptable PrePayment in the form of a Postal Money Order
(If immediate shipping is desired) or a Personal / Business
check is A-OK too if you do not mind a Short Shipping Delay
due to bank processing time. This is required only the first
time or two as once you are in the data base, PrePayment is
no longer required

Source record: 97711

If your really want a 10m rig, you'd be better off with a Uniden HR-2510, HR-2600 or Lincoln radio. They all do CW plus AM, FM, USB and LSB. There is a chip available for these radios which when installed in place of the stock processor will enable the radio to operate on 12m as well, giving you a nice two band mobile rig for the auto.The conversion chip is available at: http://www.chipswitch.com

I run an HR-2600 with the "Chipswitch" mod (which I purchased on an online auction at a very good price)in my work truck and it works great on both 10m and 12m.

Yep:

Picked up a few more working Motorola
UHF Maxar 50, PL type radios, at the (CFMC)
Radio Expo Hamfest in Gray's Lake, Il. last
weekend. Thanks to all who stopped on by to
drop them, off and collect your cash money $$$

Noticed an ad from a very reputable, historic,
commercial Motorola dealer, Monty Sisco, on
Sunday for 8 more units available. Responded
back immediately to take Monty up on his,
reasonably priced offer.

Once MSisco9939@aol.com. delivers the product,
our search for UHF Maxar 50's will be over. With
these 8 units, we will have more than enough extra
spares to last us a lifetime.

Our thanks again to every one that supplied
fair market value, working UHF Maxar 50's these
last couple months.

If you feel the need to contact us, please, DO
NOT POST REPLIES here on the N.G. Contact us
PRIVATELY by E-Mail or telephone with any information
you have.

I too would like to know where to find the Dr.'s mods.
As to the noise limiter, I have found that it will cause major
distortion if tuned to an am broadcast signal. I thought my rig was
defective for a while. When listening to a broadcast station, there was
a lot of distortion. I happened to switch the noise limiter off one day
while tuned to a local am broadcast station, and reception cleared up!

I have used mostly wire antennas in my 25 years as a ham. When I needed to hide antennas I found that #24 or #26 gauge wire worked. If you are more than a few feet away it is practically invisible. The drawback is that it will easily break so it needs to be strung between two solid supports (things that won't sway in the breeze). You shouldn't run a KW with that but running barefoot should be ok.

7187. 2/440 HT Research -- Help?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-27 00:00:00 UTC
From: DavidC <b4e@earthlink.net>
Message-ID: <7smqgo$23h$1@birch.prod.itd.earthlink.net>
Source record: 97715
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.swap

In my quest to choose a low-priced (under $200.) 2/440 HT I
have been staggered by the options!

I need something that will scan across bands, that is rugged
so I don't have to baby it during normal or emergency response
activities, that is as small as possible but still simple to use
(I hate complex layered menus like the RS HTX-202).

The smaller the radio the more likely I am to have it with me
when I need it. Comments about RX and TX audio and the
spkr/mics used are encouraged as well.

I need to scan 2, 440, and the public service bands here in the
west-central Florida area. Dual band monitoring rould be nice
too.

I have been offered the following, your comments are welcomed:

1. Standard C508 w/charger, spkr mic & Comet SMA-3 ant $150.
*I believe this does cross-band scan but has only 280mw tx power.

2. Icom IC-24AT with BC74A Wall charger, BC72 Desk top charger,
CP-12 12VDC cigar lighter plug, HM-46 Speaker Mic, mini, UT-50
Tone squelch unit, BP-84 High capacity battery (one new and one
good). Most accessories as-new in boxes. $240.
*I believe this does the cross-band scans as well. Large w/battery?

3. Icom IC-W21AT Dual Bander 2M/440MHz with full software mod
done receives 50-999MHz, no gaps, with charger, AD-25 Charger
adapter, BP-130 AA holder, BP-174 High Capacity Battery &
BP-157Low Capacity battery, stock antenna and all original
packaging, some wear but great unit, sell $200 shipped (CONUS).
*Unknown re. cross-band scanning. Unknown size.

4. Alinco DJ-V5 VHF-UHF Dual band HT. 6 watts output. Includes
charger, and ear mic, Like new in original box, only 5 months old-$200
*Unknown re. cross-band scanning.

Additionally, folks also recommended the Icom IC-W32A and the
Yaesu FT-530. These *may* be the only two that offer dual band
monitoring, please correct me!

The IC-W32A is promoted as rugged, is there a significant difference in
reliability and toughness between these HT's?

The FT-530 seems to draw a higher asking price used and its scan features
have been described as "rudimentary".

Of these I think the Standard C508, Alinco DJ-V5 and the Icom IC-W32A
are still in production?

I think the Icom IC-W21AT, IC-24AT and the Yaesu FT-530 are out of
production.
Is that correct?

Is it fair to assume that accessories, parts and service will be more
readily
available for those HT's still in production?

Informed comments please?

Thanks again & 73, DavidC K1YP

7192. Re: Antenna Advice Desparately Needed!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-27 00:00:00 UTC
From: Dwight Stewart <stewart@amouse.net>
Message-ID: <37EF350E.D085E6EA@amouse.net>
Source record: 97720

Actually, this seldom is a case of cosmetics, even if that is the most commonly stated reason. Nor is it RFI problems. Instead, it is often the cable television companies pushing for these rules.

I stayed in a fairly nice townhouse community several years ago. The first couple of years, antennas were no problem. However, shortly after construction started on several new units, notices were sent out banning all antennas. After a long argument, the community owner finally told me that the cable company had offered to install cable wiring and outlets free inside the new units during construction, but one of the stipulations for this deal was a ban on all antennas.

It seems the cable company did not want competition for their cable television service (free broadcast television), or for their cable radio service (free broadcast radio). Since it is hard (in their minds) to tell the difference between these antennas and the antennas used with the hobby radio services, the solution was a ban on all antennas.

The owner agreed since he could advertise that cable was available in the new units, and he would save money by not having to run the cable wiring throughout the interiors of the new units.

Since then, after staying in several other places, I have discovered that cable companies are doing this all over the country. So, if we want to get rid of these rules, we have to reel in the cable companies.

The solution is state laws, or federal laws, to restrict cable companies from making these types of arrangements with developers. Or at least laws protecting hobby radio use in these communities.

Is there a NG concerned with Ten-Tec equipment?

In particular I'm interested in modifications for the Ten-Tec desk mike
(#1201 kit/#705 ready-built) that would make (the pre-amp part of) it
work on 5 V external voltage instead of the 7 V minimum specified.

thanks and 73,

Spray paint the antenna to make it less visible. Non-metal based paints can be used on almost all antennas. Put the antenna near a tree and paint the whole thing camoflage colors.

If there are power lines running through the neighborhood, run an extra line between the poles for your antenna (stay away from the transformers to reduce noise - though noise may still be a problem).

Put the antenna down the street in a wooded area (outside the antenna restricted area) and bury a long run of good coax between it and your house. You lose a lot of signal on the long coax run, but at least you'll be on the air. I did this several years ago, and it worked (the antenna array was almost 3/4 of a mile from my house).

Most antenna restrictions don't address antennas on vehicles, so put a good antenna system on your car and run some coax into the house.

I know you mentioned antenna tuners, but have you tried the random wire tuner from MFJ (MFJ-16010)? I used it with a slinky for a few months. I ran fishing line up a nearby tree and back to the slinky. At night, I'd pull the slinky up the tree using the fishing line, tune it up, and would be on the air.

You can also use wire inside the house with the above tuner. At one time, I had almost 250 feet of wire run around the ceiling of my apartment. In fact, I used it during the day during the same time period that I was using the above slinky at night.

Of course, several have already mentioned regular antennas inside the house. This works pretty good also.

The final solution is to forget HF and use VHF/UHF instead. The antennas for these frequencies are much smaller and therefore much easier to hide.

Hope some of this gives you a couple of ideas.

I have forsale a CAT-300 repeater controller with voice synthesizer with
autopatch.

Features:

Voice Synthesizer
Twelve Voice Messages
CW Identifier
Programmable Courtesy Tones
Forty-Five Control Functions
Full Feature Autopatch
User Speed Dials
Emergency Speed Dials
Reverse Autopatch
Autopatch Cover Tone
Autopatch Time Extender
Phone Number Read Back
Caller ID Suppression
DTMF or Pulse Dialing
DTMF Pad Test
DTMF Repeater Access
DTMF Window
DTMF Audio Muting
Programmable Prefix Codes
Programmable Timers
User Function Inputs
User Function Switches
DVR Controller Ready
Remote Base COR - PTT Logic

Controller can be seen at http://www.catauto.com/cat300.html and currently
sells
for $299.
This unit is in perfect cosmetic and opertational condition.

Asking $250 shipped obo.

Terms are acceptable prepayment by USPS mo.

It is time to clean out the excess Hustler mobile antennas.

All of the following are "like new" with almost no use, unless
stated otherwise.

Super (2000 watt PEP) version resonators:
RM-80 S $ 30 (This one can also be used on a 4BTV
vertical antenna to make it into a 5BTV)
RM-75 S used $ 25 (This one will make a 4 BTV in to
a 5 BTV also, but for phone portion)
RM-40 S $ 24
RM-20 S $ 20

Standard (400 Watt PEP) version resonators:
RM-40 used $ 13
RM-20 like new $ 14
RM-20 used $ 11
RM-17 like new $ 14
RM-15 like new $ 11
RM-12 used $ 9
RM-11 used $8
RM-10 like new $ 11

RSS-2 resonator spring - like new $ 8

MO-2 fold over mast (for bumper mount) - like new $ 21

BM-1 bumper mount - new in blister pack $ 17
BM-1 used $ 13

Triband adapter (use 3 resonators at once) like new $ 8

Five band adapter - used $ 5

Heavy base spring - some rust and corrosion - $ 5

2 m mag mount 1/4 wave antenna - unknown make $ 15

Prices do not include shipping form Florida.

Thanks.

It works FB as a direct replacement, but if your thinking of doing it for an increase in power don't waste your money. The power supply in the 811H isn't big enough to take the 572B's to their full potential. However, if you already have the tubes go ahead and use them.

7210. Re: Q: Alternator whine

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-27 00:00:00 UTC
From: Bob Lewis <aa4pb@erols.com>
Message-ID: <37EFAD89.F83E9693@erols.com>
Source record: 97738
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

You have it correct. Alternator whine is AC ripple on the DC power. A bad diode makes it worse because the ripple frequency is reduced so the battery voltage sags between charging cycles. A bad battery makes it worse because the battery is not able to hold the voltage up (like a filter) between charging cycles. A heavier load makes it worse because the load resistance causes the battery voltage to sag between charging cycles. If the battery and alternator are in good shape then a good filter in the radio power line can help keep the ripple from getting to the radio power.

7226. 220 Vac More efficient for Equipment?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-28 00:00:00 UTC
From: Gary McAdams <g.m.mcadams@worldnet.att.net>
Message-ID: <7srt96$3me$1@bgtnsc02.worldnet.att.net>
Source record: 97404

OK guys,

I'm going to be setting up a basement shack in the near future,
and I was wondering if it would be more efficient to run my
radio gear on 220 vs. 110?

Would the 220 power enable the radio, (TS-940s/AT) and associated
accessories to run cooler? The 940 has always put out lots of heat.

I will be running 220 anyway to run the amp (TL-922A) and I can
put in two outlets as easily as one.

So what do you think?

Thanks for the input and ideas...

Gary, Wg7X

Nice Shure 526-T amplified mic with a 2 tone generator installed to make it easy to tune your rig or amp on SSB. Dont pass this one up they list for 130.00 in AES catalog. Low starting bid. Good luck!! This Mic wired for 8 pin Kenwood now.

Cal,
Just keep the feeder away from any metalic objects and let it hang. The recommendation to keep it vertical will help to keep water draining off in rainy weather, but this is not a necessity. Hook it up to a good tuner and go work some stations when your ticket arrives!

I've had mine for a few months now, and love it. It's not perfect. It doesn't have very good intermod filtering with an external antenna, and it does need a long wire to receive shortwave at all, but I'll take it's imperfections in exchange for the size and convenience.

I'd highly suggest the Pryme SPM-100 speaker/mic combo to go with it.

I use "EVE" (http://www.geol.com/vx5/) for the computer connection and have found it very reliable.

Gary: Running 220V is only advantageous with equipment that draws a lot of current, such as your linear. Efficiency of all the stuff will remain the same. The advantage is that the current is halved, so a smaller breaker, wiring, and outlet can be used. Since the current draw of the rest of the stuff is insignificant, you would be best running that stuff at 110V.

Very nice looking, works perfectly. Serial number is in the 50 million.
Comes with a microphone, power cable, both manuals and a 1.8 khz SSB narrow filter. Selling for $675. U.S. shipping and insurance to the U.S. or Canada included.
Payable by money order or cashiers check because postal regulations prohibit shipping C.O.D. from Canada to the U.S. I can give references.

Don't forget to add that it has the worst receiver of any "modern" rig on
the market. What is really funny is that there are hams who think its a
great rig :-)

You _don't_ keep your lawn trimmed? ;-)

I trimmed my lawn with a weedeater just last week. Hey, I ran out of gas in the lawnmower, okay? And I'm too lazy to go to the station for another can of gas. The lawn didn't come out too smooth, but it is cut (so my neighbors should be happy). Maybe next month, when I cut it again, I'll take to time to do it better.

What, me worry about what my neighbors think about antennas? Hah, if they complain, I can easily turn into the neighbor from hell. <big grin>

Of course its a bad idea. But it is an idea (especially for the desperate). And I've seen people do it. I'm assuming the person is smart enough to stay well away from the actual power lines (even you said the danger was obvious).

> Any suggestions out there on a good desk mic to use?

It's not a desk mike, but I keep getting excellent reports for my $7.50
boom mike..

It's a computer multimedia headset. (bought for $2 out of a bin at a
local computer surplus store. Labtec headsets work just as well. (I
think this is an unlabeled Labtec) Hook the tip of the mike plug on the
headset to the audio input pin of the TS-450 through a 0.1uF capacitor,
and to the +8V DC terminal through a 10K resistor. (of course, the ring
of the mike plug goes to TS-450 ground) Works great. Hint: start with
the mike gain set VERY low, these things are pretty sensitive compared
to original Kenwood mikes.

7251. Help with ADI AR-146

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-28 00:00:00 UTC
From: Nathan Ciufo <nrciufo@one.net>
Message-ID: <37f0e7ee_3@news1.one.net>
Source record: 97510
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

I just purchased an AR-146 (factory refurbished), and everything works fine, except the signal strength meter. It works showing you the relative power output, but when receiving, I only get the BUSY light. I've called them, and they sent me an adjustment to try, but to no avail. Radio works fine, but that makes me frustrated. Anybody have similar experience or ideas?
73's, Nathan KA3MTT

I too have seen people do *dumb* things. This is just a hobby Dwight. It's not worth breaking the law, or risking you life over.

>I'm assuming the person is
>smart enough to stay well away from the actual power lines

We all know the definition of assume...

>(especially for the desperate).

There's lots of other safer ideas for the desperate. Here is just one example: I work the world when mobile on my 7' Hamsticks that are clamped to the luggage rack of my Suburban. How about clamping one to the condo porch railing (only during use)...

Hallo,

I have an old Lafayette HA-250A linear amplifier, it is an small desktop model with 2 pieces of 6JS6C tubes in it. I do not have any information of it, I do have the following questions:

1) For what frequency is this linear designed?
2) What is the output power? looking at the tubes I expect 2 x 50 = 100 watt
3) What is the input voltage? (12V ??)
4) What is the pinning of the 8 pens input-socket?

If you do have some information please drop me a message.

73, de Peter (PA5KE)

Ja 2 x 6j6 buisjes zijn goed voor 100 watt maar moeten toch wel meer
spanning hebben dan 12 volt

Message-ID: <37F11EA2.D816F15E@FIFEintellimark-HARPmn.com>
Source record: 97527

About the Yaesu VX-5R:

I have been thinking about getting one of these. (or even more than one--I have two sons who are expressing interest in getting their licences.)

Is there anything it doesn't do? (Besides wash the dishes?)
Is there anything else out there that even competes for the kind of features? Rx range? Number of Tx bands?

Has anyone used it yet? What are the reports?

How well does it work for SWL (short wave listening)?

How well does the barometric pressure/altitude/temperature sensor & display work?

It sure seems like a nice companion for hiking & camping.

Hi all;

Once in a very rare while I sell off equipment that just isn't being used. If you knew me, you'd know that EVERYTHING I own is absolutely functional, clean, and kept in a non-smoking, humidity controlled environment.

Here's the list, get it while you can...

Kenwood TS440SAT 80-10 Transceiver, with internal automatic antenna tuner, SSB and Narrow CW filters, computer interface chips, broadband transmit enabled, hand mic, power cable, SP-430 speaker (upgraded), and includes perfect original Operations AND Service manuals. This is the sweetest little rig you're likely to use, and has regularly earned outstanding signal-quality reports. Full output, 100% operational. Cabinet is free of damage, with only very slight wear around the front outer edges. Super receive audio, too, typical of Kenwoods. $750 or BRO, worth every penny.

Kenwood TH79A Dual-band HT, 2m plus 440, 5 watts out. This is ABSOLUTELY like new, less than 1 hour use. Comes with new original high-output battery (PB34), plus new additional NIMH PB33 style battery, Kenwood 2-slot KSC-14 fast charger, MFJ lapel speaker/mic, soft case (new), original box and manual. I paid over $550 for it recently, will sacrifice for $350. Check with your local toy store; the options ALONE are worth almost that much.

Timewave DSP-59+ digital signal processor, with version 3.0 firmware. Like new, no marks, amazing abilities. Includes manual and original box: $175. Really pulls them out of the "mud"; great for voice, CW and DATA..

TR-44 rotator with control box, mast mount and manual. Just back from the Rotor Doctor, it's been fully refurbed, lubed, cleaned, repainted and checked out; it looks new. $155 or BRO.

Heath SB610 Station Monitor, clean, fully operational, well built. This is a sweet monitor, with a nice bright trace, and plenty of controls. A steal at $110, includes manual.

Heath SA 2060 Legal Limit Antenna Tuner. This is Heath's "top-of-the-line" tuner, and one look inside will tell you why. Well built, like new, no scratches, works perfectly. Dual-meters, easy to adjust, supports coax, ladder-line, and end-fed antennas. Includes manual. $195 or BRO.

InfoTech M200F RTTY/CW Terminal Unit. This is from a day gone by, but it still kicks butt for RTTY/CW when compared with any of the newer "better" multi-mode units. It requires an external composite video monitor, works really great. Looks and acts new, includes manual and cable. $125 or BRO.

All of the equipment is guaranteed to be as described, you have my word of honor. I prefer postal Money Orders or Certified or Bank Checks, I ship same day via UPS.

Thanks, and I look forward to hearing from you!

7270. BTX-121 Questions

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-28 00:00:00 UTC
From: headshope@aol.com
Message-ID: <19990928171437.16456.00001943@ng-fu1.aol.com>
Source record: 97529

Question: BTX-121 2 Channel Radio

Calling anyone familiar with this radio...

Anyone aware of any modifications available for the BTX-121 from Radio Shack.

This is a 2 channel, crystal controlled radio in the business band and preset to 154.600 MHz for channel 1 and channel 2 crystal slot clear.

What I am seeking is any tinkering experience anyone may have whatsoever in playing with the radio.

Any modifications that would enable tx/rx outside preset frequency ranges with conforming crystal installed, internal squelch controls, band modifications, power mods, dtmf or the like are sought.

Any adjustments available for this radio?

Understanding the general nature of this request, I am just seeking any mod or adjustments anyone may have experience with this rig.

These radios are on clearance for around $49.00, quite a mark down from the original prices, looks as though they are moving up. This may be a good opportunity to pick up a few.

Thanks for any reply,

Bill.

BTW: For export uses , outside FCC jurisdiction

Source record: 97531

Most verticals are under 30' and most if not all of it should be hidden within the trees or by the house. Verticals work, the more resonate ground wires the better. It will never out perform a Beam or good dipole unless you are running a mono-band phased array, which is not a bad option, I looking to do this on 10 Meters, a 3 element broadside array.

I guessing it is too late, but you could have made it part of the offer that the antenna be pre-approved by the CCR board. If new, the builder has a lot, if not total say what is approved.

A last option, if you like working traffic, join MARS and/or RACES, these are federal government agencies and any requirements usually have to be excepted because Federal Government preempts CCRS.

Source record: 97532

Dave,
I recently purchased a VX-5R, and so far, I'm pretty happy with it.
As to the SWL, it's not that hot in this area. The 'stock' antenna leaves some to be desired for reception. If I want to listen to SWL, I have an external active antenna that I attach, it improves it a bit, but not as much as I would like.
As to the SU-1 unit, The altitude is kinda cute, and the barometer measures in hpa instead of millibars.
The programming of the unit is where it all gets interesting. This is a SMALL unit! I've got stubby fingers, so programming it from the keypad is NOT a joy. I use the ADMS-1E program to program the rig.
On a scale of 1 to 10, I'd personally give this rig a 7.5 to 8.
You might want to join the VX-5R group at http://www.onelist.com
There's a wealth of information there.

Hope this helped.

Jim, N2VNO wrote:

> Why is alternator whine worse on some cars than others?

Jim,

Make sure you aren't comparing car "A" with radio "B" installed with
method "C" WITH Car "D" with radio "E" installed with method "F".
Radios will have different suseptability to the same amounts of ripple.
Even the same radio in two cars using sig. lighter plugs amounts to two
different installation methods - depends on how the sig lighter gets
power.

7276. Re: New RS 10m rig - Any experiences with this rig

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-28 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <7srdc4fah1@ash.prod.itd.earthlink.net>
Source record: 97535

OK, this has been discussed MANY times before...

The rig is 'apparently' a reworked international mode CB set for
10 meters. It was even sold as a US only model I believe called
the TRC-485 (I may have that wrong, but I'm not going to go look
now. You CAN find pictures of the CB rig on the web, and it
looks IDENTICAL to the RS picture in the catalog except the
CB says frequency and '40' on the right where the 10M rig
just says frequency.)

It does AM, FM, and SSB. It steps at 1kz and does NOT do CW
(as currently reported). It reportedly does do both USB and LSB.

Now before people bitch and complain about the rig, remember,
THIS IS ONLY $150!!!!

It is unknown if the rigs clarifier will track on TX and RX or just on
RX. But hey, if you can't figure that one out, just go ask a CBer
for help! The clarifier should have +/- 2.5khz, which will MORE
than handle the 1kz granularity of the VFO.

As to CW, again, if you can't figure that one out.... (Personally, I
would
just make a small interface with a 'twin-T' to provide tone on TX.
Would make a nice little one-evening construction project. Hey,
we're HAMs, we should know how to do this!)

OK, reports on the operation of the CB version were fairly good,
but not outstanding. But let me repeat this. THIS RIG IS ONLY
$150!!!

Will I get rig of my HTX-100 for one? Probably not. The HTX-100
actually worked pretty darn good on CW. I didn't even like the
Unidens. They were supposed to be the same, but 'something'....

Projected availability is October, which could mean any day now.

Personally? I think it's going to be a killer seller to HAMs for the
Christmas holidays, especially with the sunspot cycle starting to
open things up.

Hello, I am a new ham, in fact I don't even have a radio yet. I'll pass the morse code Sunday. Maybe you can help me with a question. I bought a g5rv at a hamfest. It is a 102' dipole with 31' of feeder. I supported the center on a wooden telephone pole I have in the yard here. Then I tied the wires to trees, almost horizontal. The feeder line was longer than I expected. When It hangs straight down the pole, I have 8 ft or so left on the ground. Some guy at the show said it must be vertical all the way.
Right now, I have sloped it through a nearby tree, and angled it to the house, then down the wall 3 feet. This brings me to the end of it. I have the balun that hooks here.
Would I be better to bring it straight down the pole? Then what of the excess? The Pole is about 15 feet from the house. Any suggestions would be appreciated. Please email.
Thanks again, Cal

7291. Question: Low Output on Icom 728?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-28 00:00:00 UTC
From: rpemers@aol.com
Message-ID: <19990927222724.28357.00003466@ng-da1.aol.com>
Source record: 97579

I have an Icom IC-728 in great shape that seems to me to have low output on SSB as compared to a Knwd TS140S I used to own. The radio has 100+ watt output on CW, FM and full 50 watts on AM. When I use SSB and set the compression and mic gain to what the Icom manual states is a good starting point I'm only seeing about 50 watts peak.I used to get the full 100w out of the Knwd with a normal mic and compression setting. If I really whistle into a dummy load I can get a full 100 watts out. Even when I try increasing mic gain I still dont' get more than 50 watts out of the rig. I'm using the standard HM-12 that comes with the radio. Is there any adjustment I can make to theradio without sending it back to Icom? If anyone has had this problem(if it is one)and knows the fix I would appreciate an email.

Thanks!!!

Ron

Source record: 97580

Here is RS's reply to my questions about the HTX-10 73, Ron..KB9E

We regret the delay in providing you an answer. A problem with the Tandy server for the Tandy web site prevented us from receiving your question until today.

The HTX-10 10 -Meter Transceiver is ideal for use in your vehicle. Its 25-watt SSB/FM and 7-watt AM output provides the power you need to communicate, and its tuner covers the entire 10-meter Amateur Radio band (including the 28.3 to 28.5 MHz Novice Band). The transceiver's crystal controlled circuitry provides accurate and stable channel selection, making it ideal for your amateur communications needs.
The date this is expected to be available for purchase is early to the end of October, 1999.

Advanced Features:
1. Large illuminated digital display - clearly shows the frequency, functions, and incoming signal strength

2. 1 kHz Frequency Resolution

3. Scan - the transceiver scans its frequency range for transmissions

4. Mic and RF Gain Control - lets you adjust the microphone and receiver gain to match the strength of the received signal.

5. Switchable Noise Blanker - reduces interference from ignition systems, motors and other electrical equipment

6. Squelch Circuit - compensates for signal fading and eliminates signal chopping

7. Automatic Gain Control - maintains a constant volume level, regardless of the signal strength

8. Built-in Automatic Modulation Control - ensures a constand RF modulation level

9. Universal Mounting Bracket - Lets you mount your transceiver securely in your vehicle or on a shelf in your home.

GENERAL SPECIFICATIONS:
1. Frequency Range - 28.000MHz to 29.699
2. Tuning Step - 1 kHz/ 10kHz / 100kHz (selectable)
3. Frequency Generation - Digital PLL Synthesizer
4. Antenna Connector - 50 ohm coaxial connector
5. Microphone - Electret Condenser Type
6. Operating Temperature - -4 to 122 degrees F

-10 to 55 degrees C
7. Power Source - 12 to 16 VDC, negative or positive gnd
8. Speaker - 8 ohm, 2-watt
9. Impedance - 50 ohm
10. Dimensions - 6 1/16 x 2 3/64 x 9 41/4 inches
11. Weight (without batteries) - 2.65 lbs
12. Accessories - microphone, mic holder, mounting hardware, mounting bracket, dc power cord spare fuse

RECEIVER SPECIFICATIONS:
1. Sensitivity - .5 mircovolts for 10db S/N
2. Audio Output @ 10% THD (external) - 2.5W at 8 ohm
3. Selectivity - 50 db min
4. Intermodulation - 60 db min
5. Distortion - 10% max
6. S/N Ratio - 40 db min
7. IF Rejection - 70 db or better

TRANSMITTER SPECIFICATIONS:
1. Power Output - 7W (AM), 25W (FM/SSB)
2. Distortion - 5%
3. Deviation - +/- 2 kHz
4. S/N Ratio - 40 db
5. Spurious Emission - -65 db or better
6. Battery Drain:
at max power output: AM less than 3.0A
FM less than 5.0A
SSB 5.0A

at no modulation: AM less than 3.0A
FM less than 5.0A
SSB 1.0A

If you have further questions or concerns, please do not hesitate to contact Product Support at 800-843-7422.

Thank you,

My point exactly. You're going to get people that
shave all the trees off the top of a hill, put a
big house on top, then complain about what other
people do to "their" environment. To stereotype,
those who are more worried about the perception of
property values than other people's freedom. I
sure wouldn't want them for neighbors. I'm
equally sure many others would, as "they" usually
keep their lawn trimmed.

Just random thoughts

I had a GAP Titan. Did I say HAD? An SGC auto tuner with various lengths of wire and a counterpoise outperformed the gap hands down on all bands every time, even local 10m vertical contacts when the SGC wire was horizontal. I don't think the SGC is the best antenna but I do think the GAP is a lossy piece of crap. You should be able to hide some wire under your eves or something and feed it with an SGC tuner. I'm happy with mine.

It appears that most of the responder are assuming that you are going to be a "turn-key" CB type ham with no truly internal involvement in amateur electronics construction and operation. Let me introduce you to the other side of amateur radio that follows the traditions from its beginnings. First visit the following website ----> http://www.wa3key.com/collins.html that will introduce you to transmitters and receivers that you can purchase for a couple hundred dollars TOTAL. There are some of us that like, use, and collect a thing called "boatanchors" or radios that "glow in the dark". Check out some of the links on Norman's (WA3KEY) home page above and I guarantee you will be entertained. This evening before I checked the Usenets I talked (CW about 15 WPM) to a station in Argentina on a Hallicrafters SX-100 Receiver and a Johnson Viking Ranger (about 75W). I also talked to two Japanese, one Australian, Two Cuban, one Virgin Islands and about 10 stations on the east coast..... all on CW. I will tell you honestly that there is a true maximum rush to dig a crude, chirpy, barely readable station out of deep static and noise on the edge of 40 meters, call them, then sign your call sign, and have them answer you. Man that "rush" beats any kind of communications method in the world.

There is something to ham radio other than talking an a high powered repeater driven CB type radios. You can talk (or communicate) with many hams even in foreign countries using very limited english or even practice that French or Spanish you took in high school or college. Remember that many hams in foreign countries can't afford high powered rigs that use voice communications so they use that very alive art of Internation Morse Code that will never ever die. If meeting foreign worldwide friends and exchanging QSL cards could be interesting to you then CW will have you filling many, many albums. I have almost 60,000 cards since 1954!!

Also if you tend to like to be a little technical these are some of the modes I communicate in almost daily:
1) SSTV which transmits and receives television pictures anyplace in the world, Anarctica, Australia, Russia, USA, etc.
http://www.ultranet.com/~sstv/
2) aX.25 (packet) radio which is connecting your computer other hams via amateur radio worldwide. You may find the routing system used extremely interesting in this truly digital mode of communications..
3) Fast-Scan TV (ATV) which allows you to communicate with other hams with real-time pictures while talking. Check with your ham clubs in your city to see if you have access to this type repeater.
http://w6yx.stanford.edu/~stevem/atv/links.html will be a start of locating some repeaters that may be in your area.
4) Satellite communications. You must get a satellite tracking program to follow the amateur satellites and also the shuttle paths since most astronauts are hams and will talk to you as they fly over.

http://www.amsat.org/
5) APRS is massive fun allowing you to connect your amateur radio to a GPS and have more fun that you can imagine by tracking yourself and other mobile hams. http://home1.gte.net/scout/APRS.htm

I've tried to show you that there are many, many things that you do with new license other than have rather nonsensical type CB conversations. All of the modes I've described require a license so I hope opens other doors for you. Good luck and welcome to this fantastic hobby.

7308. Re: 220 Vac More efficient for Equipment?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-29 00:00:00 UTC
From: John Dewey <jdewey@tribune.com>
Message-ID: <7stjq3$29v4@news.tis-in.trb>
Source record: 97346

You will find that there is a (nearly) linear inverse relation ship between
the voltage and current.
The watts used by the radio will not change. My Kenwood had two tapped
Primary windings, whcih were wired in paralell for 110v (+/-) and in series
for 220v. Then you could adjust the taps to take care of 250v or less than
100 v.

The number of "ampturns" on the primary would be the same either way.

If you change it to 220, remember to change the plug to match the correct
socket, and cut the size of your radio's input fuse in half.

My best recomendation is not to go anywhere that has ANY covenants or restrictions! Next best suggestion is, if an antenna is not approved, put up some sort of stealth antenna. With all those trees, an end fed wire may be an option. Feed it with burried coax, run up one of the trees to a balun. Paint the coax the approximate collor of the tree bark, and the wire sky blue, or blue-gray. A good tuner will let you work just about any band. Probably, no one will notice. Just don't expect to run an amplifier, and try to use as low a power level as possible to avoid TVI.

Hi Gary. If you can't or won't spend the bucks for an antenna
analyser, a watt/swr meter will be really handy. I got a small one at
Radio Shack that works for 2m/70cm at up to 60 watts. A power supply
and base antenna may be handy if you want to run the HT in the house.
I would probably put a mobile in the house, and use the HT in the car.

Want to have a Ham radio or SWL Web Page, for free? Without floating ads and other popup banner windows, etc.?

I am offering free web space for Shortwave, Scanner, and Ham Radio hobbiests. Please come and visit http://hfradio.org - there is a link to the sign-up page. There are a few already active with their sites, which you can also see from the listing page.

There is a lot of other things at the site, as well. But if you are looking for a great place to mirror your site, or to have your main site, consider http://hfradio.org.

73!

(10 meters is starting to show signs of activity. You can find me there often)

Zoning laws do apply in many areas, are all in
writing as public documents, can be overridden
with variances, and are subject to modification by
an elected representative government. To me, a
better system than cc&r, but that's just me.
Freedom does come with a price, you're right. I
believe the price is a duty to oppose restrictions
of freedom, and the price of learning tolerance.

I, for one, wouldn't mind living next door to a
garage.

>>sure wouldn't want them for neighbors.
>
>Then don't buy there...
>
My point exactly. Voting with your feet.

Lots of different ways to go here.

If it were me, I'd put a dual band mobile unit in
the car, with a decent trunk or roof mount antenna
- but I drive a lot. A mobile rig will give you
better range, and is easier for most to use while
driving.

The other thing I'd do, if you haven't already, is
get a decent longer antenna for the HT, something
about 15" or more, with a flexible whip. You'll
get much better performance than with a short
antenna.

Finally, you may want to get a base antenna for
your house/apartment. In this case, a lot of it
is "the higher the better", and use good coax. If
you do get a base antenna, I'd throw in an SWR
meter.

This all assumes you're just interested in FM
2m/440 right now. I'd probably also join a local
club, visit a couple meetings first, and meet some
people. You'll probably develop other interests
from there.

Good luck!

M-120 and GM300 use the same software.
Both use the same cable as the rest of the Maxtrac family. You also need a
RIB to hook between the PC and the radio. Converts RS-232 logic levels to
TTL. See http://www.batlabs.com for details.

Monty:

That's great, I will take all of your remaining
10 working UHF PL Maxar 50's. Lets do your original
offer of $25.00 each, including shipping, like you
advertised for the lot of 8 you had left yesterday.

Still waiting for your un-published contact
information as to where do I send the $250.00 Postal
Money order to? I never received a response from the
THREE previous E-MAILS TO YOU about this pending
transaction!! I am also a little confused on how the
more you sell of this item, the quantify keeps going
up?? Yesterday you had only 8 left. Today you have 10.
I'm starting to wonder if you ever had any Maxar 50's
to sell at all!!! Could this maybe be some sort of sick
sales tactic to get back at your competitors low pricing??
Doesn't sound vary fair to me.

If you really do have working UHF Motorola Maxar 50's
available, than I would like to purchase the lot from you.
If not, please quit wasting my and others time with your
nonsense.

I can be reached by E-Mail, or telephone (listed
below).

Thank You;
Gregory Gately (K9OYO)

No internal modem. I set up portable in the backyard with a temporary
dipole and battery power and I could still hear it on 80m, so obviously
it wasn't getting into the rig through the power.

> Some things you can test by simply disconnecting them & seeing if the

Indeed, I have noticed some noises on some bands which only occur
in text modes on the monitor, not in Windows or X.

I replaced the power supply today and the problem seems to be solved --
80m is as clean as it gets. The PC will eventually be located nearer
to the rig, so the problem might come back a bit, but looks good so far.

I'll keep the old one around in case I need a wide-band RF noise source
with internal antenna ;-)

thanks
Hamish VK3SB

7333. NEED: Flyback transformer for Tek 453 scope

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-29 00:00:00 UTC
From: Devin Butterfield <dbutter@wireless.net>
Message-ID: <37F1E19C.B8A83602@wireless.net>
Source record: 97434

Hi all,

I have an old Tektronix 453 oscilloscope that has a bad HV power supply,
and I suspect that the transformer may be the problem.

If anyone has a spare HV/flyback transformer for the Tek 453 that they
would be willing to sell, please let me know.

E-mail me at:

dbutter@wireless.net

Thanks in advance!

From: Walter Wilson <wewilson@techemail.com>
Message-ID: <rv3o3r53i513@corp.supernews.com>
Source record: 97435

I start with the Calib/SWR switch on SWR. I put about 10 watts or so from the transmitter through the tuner, and set the gain knob (right of the Cal/SWR knob) to give full meter deflection. Then I begin adjusting the inductor for maximum dip in the meter. Then adjust the coarse capacitance and capacitance for maximum dip. Now you move between the inductor and fine capacitance until you get the meter deflection to near zero. If the fine dips at 100, move the coarse up a notch. If the fine capacitance dips at zero, move the coarse down a notch.

With the gain control all the way CCW (it clicks to this setting) you're reading watts. Calib shows forward power, and SWR shows reflected power.

To measure SWR, put on Calib and adjust the gain for full deflection. Flip to SWR, and read the SWR off the top scale.

Go to my webpage (http:// 209.192.59.69/) and go to the page for My Station, then follow the link to the Nye Viking MB-II Tuner. The manual pages are listed there. (Pictures to come later)

If you click on the pages, they view in your browser. If you right-click on the link to the page, you can "Save Target As.." and save the page to your computer. Then you can print it however you wish.

Good luck,
Walter Wilson

I looked at these same two rigs about 6 months ago and settled on the 746. They are very close in features and capabilities, however, so it could come down to a coin toss, depending upon your own preferences. I have been generally happy with the 746, but if you can stand a few hundred dollars more I would suggest getting the 756.

Hi all;

Once in a very rare while I sell off equipment that just isn't being used. If you knew me, you'd know that EVERYTHING I own is absolutely functional, clean, and kept in a non-smoking, humidity controlled environment.

Here's the list, get it while you can...

Kenwood TS440SAT HF Transceiver, with internal automatic antenna tuner, SSB and Narrow CW filters, computer interface chips, broadband transmit enabled, hand mic, power cable, SP-430 speaker (upgraded), and includes perfect original Operations AND Service manuals. This is the sweetest little rig you're likely to use, and has regularly earned outstanding signal-quality reports. Full output, 100% operational. Cabinet is free of damage, with only very slight wear around the front outer edges. Super receive audio, too, typical of Kenwoods. New Lower Price: $650 or BRO, worth every penny.

Kenwood TH79A Dual-band HT: Sold!

Timewave DSP-59+ digital signal processor, with version 3.0 firmware. Like new, no marks, amazing abilities. Includes manual and original box: $175. Really pulls them out of the "mud"; great for voice, CW and DATA..

TR-44 rotator with control box, mast mount and manual. The rotor is ust back from the Rotor Doctor, it's been fully refurbed, lubed, cleaned, repainted and checked out; it looks new. $155 or BRO.

Heath SB610 Station Monitor, clean, fully operational, well built. This is a sweet monitor, with a nice bright trace, and plenty of controls. A steal at $110, includes manual.

Heath SA 2060 Legal Limit Antenna Tuner. This is Heath's "top-of-the-line" tuner, and one look inside will tell you why. Well built, like new, no scratches, works perfectly. Dual-meters, easy to adjust, supports coax, ladder-line, and end-fed antennas. Includes manual. $195 or BRO.

InfoTech M200F RTTY/CW Terminal Unit. This is from a day gone by, but it still kicks butt for RTTY/CW when compared with any of the newer "better" multi-mode units. Works with your PC or an external composite video monitor. Looks and acts new, includes manual and cable. $125 or BRO.

All of the equipment is guaranteed to be as described, you have my word of honor. I prefer postal Money Orders or Certified or Bank Checks, I ship same day via UPS. I'll split the shipping with you.

Thanks, and I look forward to hearing from you!

Never said it was, Jones.

> >I'm assuming the person is
> >smart enough to stay well away from the actual power lines
>
> We all know the definition of assume...

I noticed that you left off the part where I said "even you said the
danger was obvious" in the quote above.

> >(especially for the desperate).
>
> There's lots of other safer ideas for the desperate. Here is just one
> example: I work the world when mobile on my 7' Hamsticks that are clamped to
> the luggage rack of my Suburban. How about clamping one to the condo porch
> railing (only during use)...

Already covered an antenna on a vehicle in a previous post. The
sentence you are complaining about, Jones, is only one sentence in a
long post covering several ideas for hiding antennas in a antenna
restricted area.

Well, enough said about this. You've made your point and I'm sure
everyone has heard your warning (including the person who posted the
original message).

Take care.

I have a like-new Yaesu FT-50RDHP for sale. The unit includes the FTT-12 keypad for CTCSS; also has the 1100 mAH battery, rubber duck antenna, wall charger, all original paperwork and packing The unit puts out 5W on both 2m and 440.

Also I have the Yaesu speaker mike for this HT.

I paid $270.00 for the rig in Jul99, and $30 for the speaker-mike. I just found that VHF/UHF wasn't my cup of tea!:) So I will sell the rig, plus mike, for $210, buyer pays shipping.

Please respond via e-mail to n7int@arrl.net.

I'd like to give my point of view on this as one who is presently
selling a perfectly good DSP 59+, having replaced it with the 599zx.

It's strictly economics versus features; I bought the 59+ not knowing
what I'd do with it. It works super on Voice and on CW, and gives a
credible performance on Data. Where it "falls down" is switching from
mode to mode. In a word, frankly, it's laborious. You've got to
twist knobs, and push several buttons to go, say, from Voice to Data.
Once you're there, however, it's great.

The 599zx, on the other hand, remembers whole combinations of
settings, and you can click from one to another with a single button
push.

So, it's up to the buyer. If you're constantly switching back and
forth between RTTY, Voice, Packet, etc, then you'll probably get a
cramp from the 59+.

If on the other hand you want to save a hundred or two, and the above
limitation doesn't bother you, then the 59+ is super.

Jus my 2 cents.

Neil

P.S. My 59+ is STILL available, make me an offer:

7356. FS: New Kenwood KSC-14 Dual Desk Charger

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-29 00:00:00 UTC
From: jkinsley@raex.com
Message-ID: <7stsq7$l3o$1@nnrp1.deja.com>
Source record: 97457

BRAND NEW in box: Kenwood Model KSC-14 Dual Slot Rapid Rate Charger!
Will charge two batteries at trickle or sequentially at rapid rate.

The KSC-14 comes with removeable battery pocket inserts and will charge batteries from Kenwood model TH-22, TH-42, TH-77, and I believe the TH-79 series radios as well as some older models.

The KSC-14 is compatible with the following batteries: PB-30, PB-32, PB-33, PB-34, PB-6, PB-7, PB-8, PB-9, PB-11, and also Land Mobile model batteries KNB-5, KNB-6, KNB-7 and KNB-9A.

Price is $48 and includes shipping (ground) in the 48 states.

Please respond to jkinsley@raex.com

I have had the 746, 756 and 920.
I think the 746 is the best buy for the money of these 3. Plus you get
100 Watts out on 2 meter. The display is better on the 746 also.
If you want to wait and save up some money, go for the Icom 756 PRO
with the color display, coming out next year.

REQUEST FOR DISCUSSION (RFD)
unmoderated group comp.dcom.tech

This is a formal Request For Discussion (RFD) for the creation of the comp.dcom.tech newsgroup. This is not a Call for Votes (CFV); you cannot vote at this time. Procedural details are below.

Newsgroups line:
comp.dcom.tech The theory and practice of data communications.

RATIONALE: comp.dcom.tech

With the widespread deployment of commercial communications equipment in both the business and consumer markets in the last few years there is growing interest in all aspect of communications theory. The amount of professionals working in the communications industry is growing rapidly with the growing use of broadband internet, ethernet and wireless devices.

While there are often discussions on communications theory and implementation on Usenet newsgroups, they tend to be scattered in different newsgroups (such as some of the groups in the following hierarchies alt.ham-radio.*, alt.radio.*, rec.radio.*, comp.dcom.* and in the group comp.dsp). They are often "buried" in the high volume newsgroups such as comp.dcom.cable.modems or comp.dcom.modems, where the vast majority of messages are unrelated to this topic (since the messages are often related to very specific hardware and not general in nature), thus making it difficult to participate in discussion on the topic without being overwhelmed by the volume of newsgroups and postings in such newsgroups.

This group will be for a more general and higher level of discussion on digital communications than most of the other subgroups of comp.dcom.* which are usually specific to certain types of media, protocol, equipment, etc. This group would be more similar to comp.compression or comp.dsp.

A recent search (12 April 1999) at <www.altavista.com> for the keywords FSK PSK MSK QAM QPSK GMSK OFDM BPSK (well known acronyms in Digital Communications) turned up 103788 web pages, while the phrases "digital communications" was found in 25098 pages, and CDMA was found in 124090 pages. A <http://www.dejanews.com> search covering Oct 1, 1998 through Apr 1, 1999 on "digital communications" found 89000 entries.

The IEEE Society has a number of publications for the communications professional such as:

IEEE Transactions on Communications
Journal of Selected Areas in Communications (recently expanded to include 3 issues on wireless communications)
IEEE Transactions on Vehicular Technology
IEEE Communications Letters and the Communications Magazine.

There is also several technical committees with associated mailing lists.

However, again there is not a good forum (that I am aware of) for discussing many issues (see below) that will fit nicely into this discussion group

In order to bring about a place where experts and novices can more easily find answers to digital and analog communications problems, a newsgroup that focuses specifically on the topic is proposed.

CHARTER: comp.dcom.tech

The comp.dcom.tech newsgroup is for those wishing to discuss topics in digital communications theory and practice (analog communication discussions are also welcome)

Topics may include, but are not limited to:

Design of communications circuits and devices
Algorithms used in communications devices
Performance Issues
Implementation Issues in VLSI, FPGAs, DSPs and software
Complexity and cost trade-offs
Channel equalization and estimation
Simulation of communications systems
Physical layer of IEEE, ETSI standards
Wireless & wireline communications

While small C or Matlab or example programs will be allowed, the posting of binaries is prohibited.

Announcements of new products or services specifically related to digital and analog communications will be allowed.

Announcements of conferences in the field of digital and analog communications will be allowed.

comp.dcom.tech will not be moderated.

END CHARTER.

PROCEDURE:

This is a request for discussion, not a call for votes. In this phase of the process, any potential problems with the proposed newsgroups should be raised and resolved. The discussion period will continue for

a minimum of 21 days (starting from when the first RFD for this
proposal is posted to news.announce.newgroups), after which a Call
For Votes (CFV) will be posted by a neutral vote taker. Please do not
attempt to vote until this happens.

All discussion of this proposal should be posted to news.groups.

This RFD attempts to comply fully with the Usenet newsgroup creation
guidelines outlined in "How to Create a New Usenet Newsgroup" and "How
to Format and Submit a New Group Proposal". Please refer to these
documents (available in news.announce.newgroups) if you have
any questions about the process.

DISTRIBUTION:

This RFD has been posted to the following newsgroups:

news.announce.newgroups, news.groups,
comp.dsp, comp.std.wireless,
comp.dcom.xdsl, comp.dcom.modems,
comp.dcom.modems.cable,
rec.radio.amateur.digital.misc,

7360. Ten-Tec Pegasus performance vs. Icom-756

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-29 00:00:00 UTC
From: Gil Bishop <gbishop@home.com>
Message-ID: <37f25df4_1@news1.prserv.net>
Source record: 97461

Going to preface this by saying I really like my 756, but... I my need to free some "working capital" in the near future and wondered if anyone who'd had a chance to try the Pegasus would care to comment - primarily on the receiver and the user interface. Realize there should be some trade off - at least there better be at $895 new vs. $1850 - I'm curious as to where Ten-Tec has cut the corners. Can't believe a plastic bezel and some knobs saves that much $$$.

Vry 73,

Source record: 97466

Gil, I talked on one yesterday at K5LJC's house and I loved it.
I have had a 756 and the only difference I could tell in them was the
756 had 6 meters and an active band scope, but the Pegasas had an
instant band sweep adjustable from 10 kc to 1.5 met and when you saw a
siginal all you had to do was click on the peak and you were instantly
there..the DSP and Dual Band Pass tuning was the same as the 756. BUT
you have 34 filters you can use with the Pegasas... Them difference in
the money for the 2 is because Ten Tec did not have to build the Front
Panel Display which evidently is the main cost of the radio beside the
amp section. Also you have 15 different filters to change your output
audio.
I have a 746 now and I am going to put it in my VAN and order a
Pegasas next week.

Dear Gil,

I've had my Ten-Tec Pegasus since September 1st. I've appended below a
copy of my original September 2nd impressions.

I have now been using it for one month, and I'm very happy with it. I have
found it to be such a fun radio to use, that I've been on the air more
than usual. I do casual shortwave listening and CW DX chasing on evenings
and weekends.

I have had no problems with the radio or software.

I waded into the 3C0R pileups and managed to work them with the Pegasus's
100 watts. My antenna is a Tennadyne T-6 log periodic
at 40 feet, and from California, getting 3C0R was tough! During the
pileups I put the receiver to some intense use. I never noticed any
overload, distortion or filtering problems. Nice full break-in operation
so I could hear all the policeman and the incessant callers.

I don't have the test equipment to measure the performance, and the
original specifications and price led me to expect some compromises and
disappointments. However, I have had no problems, and the Pegasus has
impressed me with "good" to "very good" performance.

So far, I like it, and I wouldn't give it up for any other radio.
(Well, maybe I could sell the other radio and buy *two* Pegasus for the
same price.)

Best Regards,
Mark Aaker K6UFO

Forum: rec.radio.amateur.equipment
Thread: TenTec Pegasus
Subject: Re: TenTec Pegasus
Date: 1999/09/02
Author: Mark Aaker <NOSPAMaaker@apple.com>

My Ten-Tec Pegasus experience so far:

My new Ten-Tec Pegasus arrived yesterday (9/1/99). After dinner, it took less than one hour to install it and be on the air. I had no problems with the hardware installation, thanks to Ten-Tec providing all the cables, and even spare connectors. I think it has an attractive looking case.

I had no problems installing the software. The Ten-Tec instructions were clear. I'm using an old 75 MHz Pentium laptop with Windows 95.

The software and the radio worked the first time without any problems. That's more than I can say for some products these days. I spent most of my time exploring the various controls and settings to learn what's there. It is quite different not having knobs to turn, but it seems like it will become easy with a little practice.

The receiver sounds good. I first did some shortwave listening all over the spectrum, and then made a CW contact in the ham bands. It is clearly "adequately" sensitive and selective. Its nice to have a large number of filters to choose from, rather than just two. The DSP notch filter worked to eliminate a heterodyne, but I didn't notice much effect from the "Noise Reduction" filter. The built-in speaker had an occasional "rattle", but the sound on the headphones is perfectly clear. After I learned how to turn the power output up, I made a CW contact. I got the usual 5NN. I didn't ask for a signal report in detail, as they were busy working down a pile-up.

In my opinion, after 25 years of ham radio, and experience with dozens of other radios, this is clearly a "good" radio. I can't yet say if it is an "exceptional" performer or not, since that will take more time and experience in more crowded band conditions. So far, I'm happy.

Best Regards,
Mark Aaker K6UFO

Don't be afraid to try sound reinforcement mics, either! The Shure sm-48 (not 58..that one's too 'crisp') seems to work well with Kenwoods.

Radio Shack has an electret condenser mic that also works well.

Grab a standard xlr-xlr mic cord, hack off one end, and wire up your plug for the rig on the other...it is lots cheaper than buying the cable and connectors separately!

73!

Bill KS3Y

Larry Sent:
I want to buy a desk mic for my TS-450, and need some help. I first planned to just get the MC-60A, but the few I have heard on the air did not impress me that much. I have heard some good things about the Heil's, however, some of the Heil mics that I hear on the air have such a bassey, or muted sound. I also noticed that they have two types, one being the "gold".
Any suggestions out there on a good desk mic to use?

Thanks

Larry

7369. Re: 220 Vac More efficient for Equipment?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-29 00:00:00 UTC
From: Matt Erickson <kk5dr@hotmail.com>
Message-ID: <37F279FB.D9DD0FFE@hotmail.com>
Source record: 97470

Electrical laws still apply, higher voltage but lower current draw, same power consumption. Your power mains won't have to provide as much current with your gear on 220VAC, but the equipment will still consume the same amount of power, and dissapate the same amount of heat. The wiring of the house has a fixed limit of current that can be efficentlly drawn, the wires resistance will cause the current to heat the wire, raising the resistance, creating more heat etc, etc. Answer YES, 220vac is more effecint in the aspect that the current levels can remain low, causing less wire heat, but delivering the same power levels to the equipment.

I can't comment on the "transverter aspect of the 775. I did get to run a demo 775, even though I was a FT-1000D owner at the time. The 775's receiver with DSP, can out perform the 1000, hands down, no contest. The TX audio, from the 775 is a bit less broad, but not by much. I'd love have one of these 775's , it's a outstanding rig, so is the 1000, but the yaesu, is old tech, outdated, but still a great rig in it's time. I.F. DSP is the wave of the future in radio, the 775 is one of the first to really use it well.

All it tells me is that many newer rigs have DSP built in and so a lot of the guys that had the money to go out and buy these units when they hit the market are now upgrading to newer rigs with built-in DSP and selling off the old rigs and filters.

Source record: 97483

Hello all,
What are the major differences between a Yaesu FT-470 and a Yaesu
FT-530?

I am looking for another older HT and I like how those look. I was just
wondering
what the differences between them? Also what is the average prices for
them? Thanks

-Ryan

I think that people are also realizing that audio DSP has it's limitations
and that rigs with built-in IF DSP are far superior and will ultimately
provide capabilities that cannot be performed with audio filtering.
Brian Denley

7388. VX-1R Problems

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-29 00:00:00 UTC
From: Tracy Hooker <thooker@psl.nmsu.edu>
Message-ID: <37F2C7B0.3553BA8B@psl.nmsu.edu>
Source record: 97489

I have a VX-1R, and it has a wierd problem. Seems that whenever I change a frequency, either by memory or by VFO, the radio squelch breaks. So, if I hold the UP button, it begins scanning, but it is breaking squelch the whole time. On some bands, noise is always coming from the speaker, regardless of the SQUELCH setting.

Has anybody had these problems?

PS It does have the extended mod, the one were a jumper is solder across. It worked great until just recently when the radio totally reset itself (I did not do it!).

TIA,
Tracy

Source record: 97490

All:
I have a Toshiba Satellite 410CDT color notebook computer for trade. For exact specification check out this link:

http://www.csd.toshiba.com/cgi-bin/WebObjects/Toshiba.woa/wa/showSSDetailedSpecs?productTypeId=1&productFamilyId=10&productSeriesId=191

The computer have only been used in a home environment and never mobile. First as my secondary PC then as my wife's email machine. It is in excellent condition both aesthetically and technically. In summary it is a Pentium 90 or 100,
40MB RAM and a 810MB hard disk. The unit has a built in CDROM drive, Active matrix screen, 28.8 PCMCIA modem and network card.

I am looking for one of the following radios
Recent vintage Dual/Tri Band (2M + 70CM)
AOR 3000A
OPTOCOM
Base type Trunking Scanner (bearcat, can't remember model number)
Pro 2006 Preferably with Opto 456 board

Radios must be good both cosmetically and functionally. I would prefer a local (150 miles of Sacramento, CA) trade but will consider serious offers elsewhere.

Contact Kevin via email mailto:brumey@ns.net

Thanks.....

7390. Question: Sharing a receiving antenna?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-29 00:00:00 UTC
From: Kevin Gunning <brumey@ns.net>
Message-ID: <RqAI3.276$ea5.4418@dfw-read.news.verio.net>
Source record: 97491

I am seeking expert opinion on the subject of sharing a discone receiving antennas. I have environmental limits that restrict my antenna toys. I recently acquired a 2nd scanner and possibly a 3rd soon. I would like to use the same antenna in a splitter type arrangement. I want to run all 2/3 scanners at the same time. Questions:
1) Can I do it?
2) If I can, will I compromise the signal strength?
3) Are there any solutions designed to solve my multi radio, one antenna dilemma.

Thanks in advance. Please respond via email and the group.

Kevin

Yes.

> >3) Are there any solutions designed to solve my multi radio, one antenna
> >dilemma.

A low noise amp could help, provided it is immune to overload. The discone
is very broadbanded, so nearby high power signals could eat up all the
output power.
If you split it four ways, you'll need probably 9db gain to get back where
you were.
You don't want much more than that.

7398. HTX-404 Er1/ lithium battery problem

7403. Trio / Kenwood R2000 Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-30 00:00:00 UTC
From: Richard Booth <ra_booth@hotmail.com>
Message-ID: <37F38FC1.5CE6388E@hotmail.com>
Source record: 97304

Hello all

I recently got hold of a Trio R2000 comms receiver. It works well, however it's the German (M) version of the set and the frequency coverage is only 150 KHz to 25.999 MHz. The normal UK version tunes up to 30 MHz. Does anybody have a mod sheet for this receiver or any information that will allow me to open up the receiver to full UK Specs ? I have the service manual for this receiver, but it does not give any details of the differences between the models apart from the frequency coverage.

Many thanks in advance for any help

Looking for a Motorola MSR 2000 repeater system complete - minus the cards.
We have our own controller for it. But require transceiver, power supply,
back plane, cabinet, case etc... everything but the cards

Please reply to hay-family@home.com

FOR SALE: Hammarlund HQ-180 shortwave radio. Sorry, but no speaker or manual. Hence the very reasonable price. I got this out of an estate sale of an electronics enthusiast (didn't appear to be a ham. At least no ham equipment, but lots of rf generators, etc). Looks good; a couple of very minor paint chips. Priced right at $150. Located in Portland, OR. Will ship. Also willing to check out and answer any questions for serious inquiries. Please respond to <mkepp@hevanet.com>.

>different memory banks?
>
>

I purchased the FT-90R about two months ago. I like the performance
of the radio, but miss some of the features of my other Dual Band
radios. I have a Kenwood TM-V7A and two Icom IC-2710's. For what I
use this radio for the Yaesu works and sounds the best on transmit and
receive. I do miss not being able to monitor the second band while
working the first. Yes, it's one big memory bank and can not be
sererated. The two things that I would like to see changed....
1). A faster scan rate
2). elimination of the "squelch tail" after receiving every
transmission.

Hope this helps in your decision.

Source record: 97367

BRAND NEW in box: Kenwood Model KSC-14 Dual Slot Rapid Rate Charger! Will charge two batteries simultaneously at trickle or sequentially at rapid rate. Mfg. Suggested List is $102

The KSC-14 comes with removable battery pocket inserts and will charge batteries from Kenwood model TH-22, TH-42, TH-77, and I believe the TH-79 series radios as well as some older models.

The KSC-14 is compatible with the following batteries: PB-30, PB-32, PB-33, PB-34, PB-6, PB-7, PB-8, PB-9, PB-11, and also Land Mobile model batteries KNB-5, KNB-6, KNB-7 and KNB-9A.

Price is $48 and includes shipping (ground) in the 48 states.

Please respond to jkinsley@raex.com

Source record: 97377

Hi John,

I have an old DJ-160 and know just what your problem is. There is a lithium battery that holds the memory that needs to be replaced. I can't remember the battery number off hand but it is a common battery but needs solder tabs to solder it in. If you have a "batteries r us" store near you they can fix it up for you. Just take the old one to them. Or you can solder wire tabs on yourself.

Now for the bad news. The battery is really buried deep in the radio by the speaker and you need to just about completely disassemble the radio to get to it. It is really tight space to work in. On the other hand the radio is pretty old and if you kill it you are not out too much.

The battery on mine went out for the second time a couple of months ago and I am debating if it is worth fixing this time.

Do you receive BBC broadcastings? Is the signal loud and clear?
If the answers to the above questions are "yes", the next step is to deside whether your BBC rebroadcastings will be legal in your country or not, and If they will be authorised by the BBC or not.
If you don't care about the legal status of your rebroadcastings or about authorisations from the BBC, you just go ahead, connect the output of your receiver to a transmitter set on a clear frequency, and there you are, On Air!
If on the other hand you care about laws and/or want to be an authorised rebroadcaster for the BBC, check the local laws for the Mass Media, and particulary Radio, and contact BBC to tell them what you want to do...

Good Luck

>to charge the battery? Thanks.

The charger operates whenever external power is supplied, and the external
source is more than a couple volts higher than the battery voltage.
The charger circuit provides a constant current of somewhere around
60 mA regardless of the battery voltage, so 6 V and 9.6 V packs are
charged at the same rate.

You can see the charging circuitry on the schematic, which should
have been included with the radio if you bought it new.

Dave

7444. FA: Drake RR-2 Communications Receiver!!

7445. HELP!! Police motorcycle radio needed

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-30 00:00:00 UTC
From: Mark Masa <mark@kelltech.com>
Message-ID: <37F3C458.77DA7671@kelltech.com>
Source record: 97385

I'm restoring a 1952 Harley Davidson police motorcycle and the only thing that I'm missing is the radio setup. I am interested in ANY pre 1970 police motorcycle radio since I can use it as trading material with the few other people in the country who are into this sort of thing. Specifically, I think what is correct for my bike is a Motorola FM TRU41. It is two boxes about 18" long x 10" wide x 10" high. (these dimensions are approximate) The receiver was in one box and the transmitter was in the other. The power supply was in one of the boxes also, but I'm not sure which one. There are interconnecting cables between the two boxes as well as a cable that went up to the control head mounted on the handlebars. The mic came from one of the boxes and was mounted on the tank. It is a tube radio. This is the one I need for my bike but am interested in ANY ANY ANY ANY pre 1970 motorcycle radio, especially if it has tubes. I hope somebody can help me.
Regards
Mark (mark@kelltech.com)

7446. WTB: Motorola Interface Cable for PAC-RT/PAC-PL

7449. TM-731A battery

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-30 00:00:00 UTC
From: Adelphia <nj2dx@adelphia.net>
Message-ID: <JVQI3.24$br3.4153@server2.news.adelphia.net>
Source record: 97389

After ten plus years of faithful service my Kenwood TM-731A has died. When turned on the display is random gibberish. I suspect that the battery needs to be replaced. HOWEVER the manual states that an authorized Kenwood dealer should replace the battery due to the possibility of damaging CMOS circuits. Does anybody know how to replace this battery and if I should attempt to replace it myself or heed the warning?

Thanks and 73, Tom NJ2DX

7450. Standard Pin Out for Programming Needed

Newsgroup: rec.radio.amateur.equipment
Date: 1999-09-30 00:00:00 UTC
From: "Donald E. Smith" <desmith@innercite.com>
Message-ID: <37F3E82B.F8780E0B@innercite.com>
Source record: 97390

Hi there. Would anybody know the pin out that Standard Communication uses for programming on their Handheld Radios. I have been told that they use the mike jack on the top for programming. I need to make a cable to change some frequencies. Thanks and 73's Don KB6GQA
